With this purchase, you are a part of the next generation of PC users, people who demand the latest in PC technology. Whether you use your computer for business or pleasure, or both, you are sure to hit the ground running with this feature-packed PC.

There are four unique guides provided with your new PC:

1. *Getting Started Guide*
2. *Reference Guide*
3. *Service and Support Guide*
4. *Safety and Comfort Guide*

Together, they provide the following:

- ◆ information about the features of your new PC
- ◆ hints and tips to make computing easier
- ◆ information needed to replace or add components to your PC

Please take a few moments to familiarize yourself with the contents of the guides. Doing so will make it easier to find the necessary information at the turn of a page.

Words and Symbols to Watch For

The following words and symbols have special meaning in this guide:

HINT: Helpful hints that will make using your computer easier and faster.

NOTE: Important information concerning the operation of your Internet PC.

CAUTION: Failure to follow directions may result in equipment damage or loss of data.

WARNING: Failure to follow directions may result in bodily harm or loss of life.

Safety Tips

Your safety is important. Before performing any procedures involving the internal components of your Internet PC, please take a few moments to read the following **Warning** and **Caution** statements. Following the guidelines in these statements will help to reduce the risk of personal injury or equipment damage.

WARNING: To reduce the risk of electric shock and damage to the equipment, do the following:

- ◆ Do not disable any 3-prong grounding plug. The grounding pin on a 3-prong plug is an important safety feature. Removal of the grounding pin increases the risk of computer damage. If you cannot fit the plug into your electrical outlet, contact an electrician for information on having grounded outlets installed.
- ◆ Use only grounded electrical outlets when plugging in your computer. These outlets should be easily accessible at all times.
- ◆ When connecting a power cord to a grounded electrical outlet, ensure that nothing rests on the power cord.
- ◆ Turn the computer off.
- ◆ Unplug the computer power cord.
- ◆ Disconnect the modem line from the telephone jack.
- ◆ Disconnect all network cables.
- ◆ Disconnect all cables and power cords from the computer.

CAUTION: To prevent damage to the computer from electrostatic discharge, you must become static-free before removing the cover. To become static-free, touch an unpainted metal surface or one of the screws on the computer cover. As you work, avoid touching exposed metal on any of the computer circuit boards.

NOTE: If you are expecting an electrical storm to pass through your area, it is a good idea to ensure that your Internet PC is properly turned off. You should disconnect the modem line from the telephone wall jack and remove all power cords from their electrical outlets.

NOTE: The graphics shown in this guide may differ slightly from your Internet PC.

Features of Your Internet PC

This chapter gives you information about many of the exciting, easy-to-use features of your Presario Internet PC.

The Digital Dashboard

Your Internet PC has a new, informative tool called Digital Dashboard that will:

- ◆ Provide the necessary feedback to assist you in the initial setup of your PC.
- ◆ Alert you to changes in status such as connected or disconnected external peripherals.
- ◆ Inform you of new e-mail messages.
- ◆ Display the exact time according to the Atomic Clock.

Digital Dashboard

No.	Icon	Component
①	--	PC Speaker
②		E-Mail Waiting Indicator
③	--	LCD Screen
④		Internet Alive Indicator
⑤		Sleep Mode Indicator
⑥		Awake Indicator
⑦	--	Start/Reset Button

Disclaimer: Some free Internet Service Providers, such as NetZero and AltaVista, use a unique dialer. You must manually connect to these ISPs in order to use some features of the Digital Dashboard, such as Synchronize Time (Atomic Clock) and E-mail Waiting.

Disclaimer: When connecting to the Internet using a Digital Subscriber Line (DSL), cable modem, or network (LAN, HomePNA), the following Digital Dashboard functions are unavailable: Internet Alive, E-mail Waiting Indicator, and Clock Synchronization (Atomic Clock). Users of systems with DSL or cable modems should check the Compaq Presario Web site periodically for updates and details to enable Clock/Mail applications to work with these communications devices.

E-mail Waiting

Your system will periodically dial out to the Internet using Microsoft Task Scheduler and see if you have received any new e-mail messages. Digital Dashboard will display the user ID of the person(s) with new mail awaiting them. For example, the dashboard may say: JBlack has Mail Waiting, MBlack has Mail Waiting.

However, when your PC is in Sleep mode, Digital Dashboard will not display the mail-waiting message. Instead, the E-mail Waiting indicator will blink to note a new mail message.

Disclaimer: The Digital Dashboard E-mail Waiting indicator and the e-mail message on the LCD screen work with Post Office Protocol (POP) and Post Office Protocol-3 (POP3) e-mail servers. Please check with your Internet Service Provider or e-mail service provider to verify that your e-mail service uses one of these protocols. POP3 servers configured in Microsoft Outlook Express or Microsoft Outlook are ready to be enabled in the Digital Dashboard control panel.

Internet Alive!

Digital Dashboard will also notify you that you are online. When you are connected, the **i** icon will glow.

Reset

In the event of a system lockup, pressing the Start/Reset button for 4 seconds will place your PC in safe mode. Pressing the button again will reactivate the computer.

CAUTION: Be sure to save regularly. If you don't you will lose unsaved information.

Digital Dashboard Settings

To access the settings of the Digital Dashboard, complete the following steps:

1. Click **Start**, then **Settings**, then **Control Panel**.
2. From the Control Panel, double-click **Digital Dashboard**.
3. The Digital Dashboard Control Panel screen is displayed.

Digital Dashboard General Settings Tab

The Digital Dashboard Control Panel contains following tabs:

- ❖ **General Settings** - allows you to enable or disable the Digital Dashboard.
- ❖ **Internet Time** - allows you to enable Internet time updates for your PC clock.

-
- ❖ **Device Detective** - allows you to enable onscreen and sound notification of added or deleted devices.
 - ❖ **E-Mail Waiting** - allows you to configure how you are notified when new e-mail arrives.
 - ❖ **Internet Alive** - allows you to configure how your PC indicates that you are online.
 - ❖ **Dial-Up Settings** - allows you to select which Dial-up account to use.

Power Management

Your new Internet PC has three states of power: Standby (Sleep), Awake, and Off (Shut down). Typically, when you finish a computing session, you can place your PC in Sleep mode. In the event of a system lockup or if you are unplugging your PC to upgrade components, you will need to shut down completely. The following sections will walk you through each of these procedures.

Putting Your PC to Sleep

To put your computer into the Sleep mode, press the **Sleep** **1** on your Compaq USB Internet Keyboard. The sleep  indicator on the Digital Dashboard will glow.

Sleep Button

Waking Your PC

To wake your computer from the Sleep mode, press the **Sleep** **1** button on your Compaq USB Internet Keyboard. The Awake  indicator on the Digital Dashboard will glow, indicating that the system is active.

Shutting Down Your PC

To shut down your computer in order to upgrade or replace components, such as memory or PCI expansion cards, press and release the **Start/Reset** button on the Digital Dashboard. You can also shut down your computer by completing the following steps:

1. Click **Start** on the Windows taskbar.
2. Click **Shut Down**.
3. Select **Shut down**.

In Case of System Lockup

In the event of a system lockup, pressing the Start/Reset button for 4 seconds will shut down your computer without shutting down Windows.

CAUTION: We recommend that you use this method of shutdown only in the event of a system lockup since it will cause Windows to run ScanDisk and you will lose any unsaved data.

Microsoft Windows Power Management

Microsoft Windows is equipped with a power management utility program that enables you to reduce the power consumed by your Internet PC. You can set the power management properties so that certain devices turn off after a predetermined period of inactivity.

Accessing the Microsoft Windows Power Management Settings

To access the Microsoft Windows Power Management program, complete the following steps:

1. From the Windows Taskbar, click **Start**, point to **Settings**, then click **Control Panel**.
2. Double-click the **Power Management**  icon. The Power Management Properties window displays.

Preset Power Schemes

The following preset power schemes are available:

Microsoft Windows Power Schemes

Preset Option	System goes to Standby after...	Monitor turns off after...	Hard disk turns off after...
Home/Office Desk	20 minutes of no activity	15 minutes of no activity	30 minutes of no activity
Always On	Never	15 minutes of no activity	1 hour of no activity

NOTE: If you have your Internet PC connected to a network or have an “ALWAYS ON” DSL modem, you should set the power scheme to **Always On**. This will prevent the Internet PC from going into Sleep mode and breaking the network or DSL connection.

Your Internet PC power scheme is set to **Home/Office Desk**. Once the specified amount of time has elapsed, the device enters Sleep mode. Components in Sleep mode rapidly return to a fully active state once activity is detected.

Creating a Personal Power Scheme

If you find that the preset power management schemes do not fit your work habits, you can create a personal power scheme.

To create your own personal power scheme, complete the following steps:

1. From the Windows Taskbar, click **Start**, point to **Settings**, and then click **Control Panel**.
2. Double-click the **Power Management**  icon.
3. Complete the following steps in the Power Management Properties window:
 - a. Ensure that the **Home/OfficeDesk** power scheme is selected.
 - b. Click the down arrow next to **System standby** and select the amount of time that passes before the computer goes into Sleep mode.
 - c. Click the down arrow next to **Turn off monitor** and select the amount of time that passes before the monitor goes into Sleep mode.
 - d. Click the **down arrow** next to **Turn off hard disks** and select the amount of time that passes before the hard drive goes into Sleep mode.
4. Click **Save As**, type in a name for your personal power scheme, and click **OK**.
5. Click **Apply**, then click **OK**.

Your personal power scheme is now activated.

Sleep Mode

The Sleep mode is a low-power standby state that reduces the amount of electrical power consumed by your Internet PC while you are not actively using it. Microsoft Windows Power Management will automatically put your Internet PC into the Sleep mode once the power scheme timers expire. Or, you may choose to activate Sleep mode immediately by pressing the **Sleep** button on the keyboard or by completing the following:

1. Save all your work and exit all programs.
2. From the Windows Taskbar, click **Start**.
3. Select **Shut Down**, and then choose **Stand by**.
4. Click **OK**.

The Awake ☀ light will go off, and the Sleep ☾ light will glow, indicating that the computer is in Sleep mode.

About Your CD-ReWritable (CD-RW) Drive (available on select models)

NOTE: For detailed information regarding your CD-RW drive and the just!burn software, please refer to the *CD-RW just!burn Feature Guide*.

Your CD-RW drive has the following attributes:

- ◆ Supports standard CD-ROM, write-once CD-R, and rewritable CD-RW discs.
- ◆ Can be used to create your own audio CDs, share information, and save data for backups and other data storage needs.

HINT: For best compatibility, CD-RW discs should be played on a CD-RW drive.

Types of CD Media

CD-R and CD-RW media have the following features:

- ◆ CD-R discs can be used on nearly any computer system with a CD-ROM Drive.
- ◆ CD-R is recommended for creating audio discs or sharing information between computers.
- ◆ CD-R discs can be written to only once. However, you can write to CD-R discs over multiple recording sessions until you choose to finalize the disc. (Finalization is explained under just!audio in *The just!burn CD Assistant* in this section or in the online manual.)
- ◆ CD-RW can be used to create CD backups of your personal CDs.
- ◆ CD-RW discs are reusable and can be overwritten.
- ◆ CD-RW discs are recommended for creating personal system backups.

HINT: Compaq recommends that the media used with your CD-RW drive is of high quality. If you are unsuccessful with one media brand, please try another (media quality varies from manufacturer to manufacturer).

just!burn CD Assistant

The just!burn CD Assistant will appear whenever a blank disc is inserted into the CD-RW Drive. From the just!burn CD Assistant screen, you are given options allowing access to the following tools in the package.

PacketCD

PacketCD stores file to your CD-R or CD-RW disc. Selecting this option creates a drive letter in your Windows Explorer screen. You can copy individual files and treat your CD-RW drive just like any other removable media drive (e.g., diskette, Zip). With PacketCD you can format CD-RW media. Formatting options include **Random CD-RW** and **Sequential CD-RW**.

HINT: When prompted to format your media, choose the format option that best fits your specific needs.

HINT: Total disc capacity will not be regained when deleting individual files on CD-R and on sequentially formatted CD-RW media.

To share data stored on CD-R or CD-RW that has been formatted sequentially, you must first finalize your disc. Right-click your mouse on the CD-RW drive letter and select **Finalize Disc**. When your disc is inserted into another PC's CD-ROM or DVD drive for the first time, you will be prompted to install the Universal Disc Format (UDF) program. You will not need to install UDF on the drive again.

just!audio

You can create your own audio CDs with just!audio. You may record over multiple recording sessions to fill your CD-R disc. When the CD-R disc is complete, you must use the **Finalize** option in order to play your disc in an audio CD player or CD-ROM drive.

HINT: Once you have finalized your CD-R disc in just!audio, you will not be able to write to it again.

Your disc is not automatically finalized after recording. Once you have completed your recording session, you will be prompted to choose whether or not to finalize your disc.

NOTE: To test the system performance, Compaq recommends using the Emulate Only option (located in the Options window) when recording a new CD-R or using a computer system for the first time. This allows you to perform a test run before actually recording.

CD!backup

CD!backup will create personal backups of almost any CD quickly and easily. If you only have a CD-RW drive, CD!backup will use the hard drive to temporarily store the information until recording is complete. If your Internet PC is equipped with an additional CD-ROM or DVD-ROM drive, you can write directly between the drives to create a personal CD backup.

just!data

You can easily create data CDs which can be read on almost any computer and operating system with just!data. Your Internet PC can use your hard drive for temporary storage of files, enabling you to copy from one disc to another if you have only a CD-RW drive. If your PC is equipped with both a CD-ROM or DVD-ROM drive and a CD-RW drive, you can choose to write data directly between the two drives. Use these CDs instead of diskettes to transfer files from one computer to another. Additionally, you can use just!data to back up and share MP3 files and other compressed digital audio files with other PCs. However, you cannot play these CDs on an audio CD player (unless audio files were copied in just!audio). For more information about using these tools, refer to the online user's manual.

Accessing the just!burn User's Manual

The just!burn software included with your Presario Internet PC comes with a complete online user's manual to answer any questions you might have about the functionality of the software with your CD-RW Drive.

To access the just!burn User's Manual, complete the following steps:

1. At your Windows desktop, click **Start**.
2. Click **Programs**.
3. Click **CeQuadrat** and select **just!burn**.
4. From the toolbar, choose **?** and select the **Help** option.

The online user's manual opens automatically.

Recording Audio CDs

To achieve the best performance when recording audio CDs on a CD-RW drive, complete the following steps:

1. From the just!audio main menu, select the **CD-ROM** tab.
2. Insert the source disc (the disc containing the tracks you want to record from).
3. Click and drag the desired tracks (songs) to the New CD window. This step will copy the selected tracks to a temporary file on your hard drive.
4. When copying to the hard drive is complete, remove the source CD.
5. Insert the destination disc (the disc you want to record to), and wait until the content list of the source disc clears from the source window. This step will take approximately 10 seconds.

The source window will then show previously recorded tracks, or be blank if you are using the disc for the first time.

6. Ensure that **Declick** is not checked.
7. Click **Record**.
8. Once recording is complete, you will be prompted to finalize the disc. If you would like to add additional tracks, repeat steps 2 through 8.

NOTE: When you have finalized a CD-R disc, no additional tracks can be recorded on the disc.

9. Once you have completed recording your disc, click **Options**.

HINT: To test the system performance, Compaq recommends using the Emulate Only option, located on the Options screen, when recording a new CD-R or using a computer system for the first time. This allows you to perform a test run before actually recording.

10. Select **Finalize Disc**.

What is Buffer Underrun?

A buffer underrun error occurs when the data flow is interrupted. This type of error can occur on single or dual optical drive systems (CD-ROM, CD-RW, or DVD-ROM drive).

If you experience a buffer underrun error in the just!burn application, a window will appear offering multiple options. These options include Repeat Track, Continue Track, Next Track, Finalize + Cancel, and Cancel. For best fidelity, we recommend that you select Repeat Track.

NOTE: In extreme cases, some errors may render your disc unusable. If this occurs, it may be necessary to start over with a new disc and then properly dispose of the old disc.

Tips to help prevent buffer underruns:

- ◆ Close any other open programs before starting to record.
- ◆ Keep the CDs, the recorder, and your source CD-ROM drive free of dust, fingerprints, and scratches.
- ◆ Try a different brand of recordable disc.

Using the DVD Player (available on select models)

To change the drive region, complete the following steps:

1. Insert a DVD into the DVD drive.
2. Click the **DVD Options** button on the DVD Player control panel. The DVD Options window opens.
3. Click the **Select DVD Region** tab.
4. Select another DVD region from the displayed map or from the radio buttons so that your drive's region setting matches the disc's region. After you make a change to your drive's region setting, the remaining number of changes allowed on your drive is displayed.
5. Click **OK**.

Play Settings

The DVD player has two modes or play settings. The DVD mode and the File mode. Use the DVD mode to play a standard DVD. Use the File mode to play MPEG file type.

To play content from the File mode, complete the following steps:

1. Point and click the **Open**  icon on the DVD player control panel displayed on your computer window. The list of files displays.
2. Select the file you want to view.
3. Click **Open**. The content begins playing.

Not all of the following features are available on all DVDs:

- ◆ If the DVD player is in the DVD mode and your disc does not have subtitle language options, the **Subtitle** button is disabled.
- ◆ If the DVD player is in the DVD mode and your DVD has subtitle language options, the **Subtitle** button is enabled.

When a DVD is inserted into the DVD drive, the features available on your DVD player are displayed. When a particular feature is not available, the respective button does not respond when clicked.

Parental Control of DVD Viewing

In general, the Motion Picture Association of America (MPAA) rating of a DVD movie (G, PG, PG-13, R, or NC-17) is printed on the DVD cover and documentation. For DVD titles with parental control, a parental control code is recorded in the DVD disk to match the MPAA rating; however, manufacturers sometimes record the wrong parental control code on the DVD disk, which causes a mismatch between the actual MPAA rating of the movie and that appearing on the DVD disk.

If a mismatch occurs, the DVD player will not be able to enforce the parental control feature. It is important that DVD movie buyers test the parental control feature of each disk before purchasing the disk to ensure that the parental control safeguard is working properly.

The following are examples of issues with DVD disks you may encounter:

- ◆ The disk will not play if the parental control on the DVD player is set to the MPAA rating and the parental control code embedded on the disk is higher than the actual MPAA rating. This defect lies with the DVD movie, not with the DVD player.
- ◆ If the parental control code embedded on the DVD disk is lower than the actual MPAA rating, the DVD player will play movies of a higher MPAA rating than the parental control setting on the DVD player. This defect also lies with the DVD movie, not the DVD player.
- ◆ A DVD disk might not carry a parental control code, either because the movie does not support parental control or because there is a manufacturing defect. In general, if a DVD disk has an embedded parental control, the cover or the DVD disk itself will call attention to this fact. The DVD player will allow titles without parental control to play, regardless of the parental control setting.

If a DVD will not play at a specific parental control setting, you can turn off the parental control function on the DVD player to allow the movie to play and turn parental control on again after viewing.

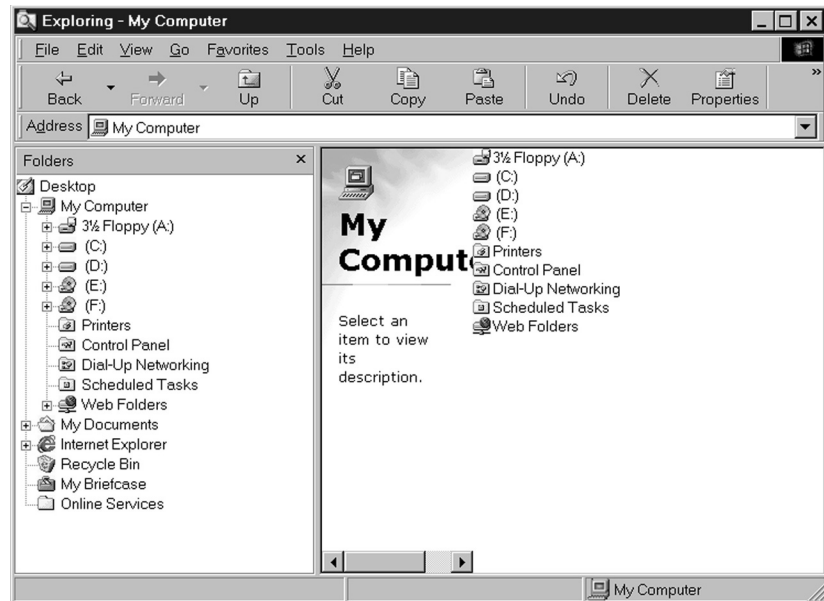

Parents may wish to move DVDs without parental control encoding, or with a control code that is lower than the MPAA rating, to a place that is inaccessible to children.

Working With Your Modem

Your Internet PC is equipped with a 56K V.90 data/fax modem. Optionally, you may have a DSL/56K V.90/1 Mbps HomePNA/10-100 Mbps Ethernet adapter card (available on select models). For information on the 56K V.90/1 Mbps HomePNA/10-100 Mbps Ethernet adapter card, refer to the *Home Networking Feature Guide*.

Identifying Your Modem

To learn more about the modem installed on your computer, complete the following steps:

1. From the Windows Taskbar, click **Start**, point to **Settings**, and then click **Control Panel**.
2. Double-click the **Modems**  icon.

In the Modems Properties window, the names of the installed modems are displayed.

Compaq Digital DSL/56K Modem (available on select models)

Your Internet PC may be equipped with a Digital DSL/56K Modem (G.lite/G.dmt/V.90). This modem allows you to use the high-speed broadband data communications technology known as Digital Subscriber Line (DSL). DSL uses the bandwidth not used on standard telephone lines for data communications.

For more information about DSL and information on how to subscribe to DSL service, visit the following Compaq High-Speed Web site:

www.compaq.com/mypresario/highspeed

NOTE: Before establishing a DSL connection to the Internet, you must establish DSL service with your telecommunications service provider and ISP.

If you choose to continue using analog technology for your Internet connections, the 56K ITU V.90 Standard is supported by your Digital DSL/56K Modem. Connection speeds vary based on the type of service available from your ISP and on telephone line conditions.

Using Your Modem with the 56K ITU V.90 Standard

If DSL service is not yet available in your area, your modem is ready to operate using the 56K ITU V.90 Standard. You will be able to download files at a rate of up to 56 Kbps over standard telephone lines.

The 56K ITU V.90 Standard enables text, sound, and video files to race to your computer. The download rate is faster than the upload rate. The maximum download speed is up to 56 Kbps and the maximum upload speed is up to 33.6 Kbps. Transmission rates may vary depending on telephone line conditions.

NOTE: Although your modem is capable of download speeds of up to 56 Kbps, current FCC regulations limit download speed to 53 Kbps.

Establishing an Account with an Internet Service Provider

Before you can connect to an ISP using your modem, you must establish an ISP account. Internet connection service using the 56K ITU V.90 Standard is widely available. Contact an ISP for information on establishing an ISP account. Refer to the *Getting Started Guide* for more information.

DSL Benefits

DSL service makes it possible to download large files in seconds rather than hours using low-cost high-speed broadband data transfer technology over standard telephone lines.

NOTE: To determine if DSL service is available in your area, contact your telecommunications service provider and your ISP. If compatible DSL service is available, you must subscribe to that service.

Additional DSL benefits include the following:

- ◆ **Talk and surf at the same time.** You can simultaneously talk on the phone, surf the Web, and download files using a single telephone line.
- ◆ **Increased download transfer rate.** Using the Digital DSL/56K Modem, you can download files approximately 100 times faster than with a 56K ITU V.90-compliant modem.
- ◆ **Increased upload transfer rate.** Using the Digital DSL/56K Modem, you can upload files at a significantly faster rate than with a 56K ITU V.90-compliant modem.

NOTE: To achieve the significant data transfer speeds associated with DSL service, your telecommunications service provider and ISP must provide the type of DSL service that is compatible with your modem.

-
- ◆ **Constant Connection.** DSL service provides constant Internet access without the wait of dialing your ISP.

NOTE: DSL connections are designed to be “ALWAYS ON.” Therefore, please refer to the Power Management section in this guide for information to avoid DSL disconnections due to default Power Management operation.

Using Your Modem with DSL Service

If you decide to subscribe to DSL service, you must determine which modem is installed in your computer, as well as identify the compatible DSL protocol.

Identifying your digital DSL/56K modem

To identify the type of modem that is installed in your Internet PC, complete the following steps:

1. From the Windows Taskbar, click **Start**, select **Settings**, and then click **Control Panel**.
2. Double-click the **Modems**  icon. The name of the modem displays in the Modems Properties window.

Identifying the DSL protocol used by your modem

The Digital DSL/56K Modem supports the G.dmt (G.992.1) and G.lite (G.992.2) protocols. The maximum download transfer rate is limited to a maximum of up to 6.0 Mbps with the G.dmt (G.992.1) protocol and 1.5 Mbps using the G.lite (G.992.2) protocol.

Connecting Your Digital DSL/56K Modem

You must contact your telecommunications service provider and ISP to determine the availability of DSL service in your area. You may be required to have an external telephone line splitter installed at an additional cost by your telecommunications service provider. In addition, your home telephone wiring may need to be inspected by your telecommunications service provider (possibly at an additional cost) to ensure that your home telephone wiring configuration will support DSL service.

Once you subscribe to Digital DSL service, visit the following Compaq Web site for details on hooking up your modem:

www.compaq.com/mypresario/highspeed

Installing the Digital DSL/56K Modem Upgrade

The Digital DSL/56K Modem Setup Wizard CD contains the drivers and software updates necessary to enable the DSL features on the Digital DSL/56K Modem.

Networking Your PCs

Connecting Your Internet PC to an Ethernet Network (available on select models)

Your Compaq Internet PC may be equipped with a 10/100 Mbps network interface adapter and its associated driver. For the exact location of the Ethernet connector, refer to the *Compaq Presario Quick Setup* poster that came with your computer.

If your Internet PC is equipped with a Home Phonenumber network adapter, refer to the *Home Networking Feature Guide* for information on setting up a Home Phonenumber network.

Setting Up a Network

You must physically connect the computers, install the network protocols, and enable file and print sharing.

Hardware Requirements

To physically connect computers via an Ethernet, you must have the following:

- ◆ at least two computers with RJ-45 Ethernet connectors
- ◆ a 10BaseT or 10/100 Ethernet hub
- ◆ Category 5 Ethernet cable

HINT: The **Network Neighborhood**  icon will not appear on the Windows desktop until the network protocols are installed.

CAUTION: You should never share your Windows folder or any of its subfolders or files. The accidental deletion of any Windows file can prevent your computer from operating properly. If you choose to share your entire hard drive carefully consider the type of access you will allow.

Hardware Installation

Connect the computers by inserting the cable into the Ethernet connectors on each computer. Refer to the hub manufacturer documentation for instructions on connecting the cables to the hub.

Installing the Network Protocols

To install the necessary network protocols, complete the following steps:

1. From the Windows Taskbar, click **Start**, point to **Settings**, then click **Control Panel**.
2. Double-click the **Network**  icon.

1. Right-click the **My Computer**  icon.
2. Click **Map Network Drive**. The Drive text box automatically contains the next available drive letter.
3. Click the **down arrow** located on the right side of the Path text box. Select the path statement of the drive you wish to map. Add the exact folder location to complete the path statement. Your path statement should look similar to the following:

C:\My Documents\Shared Files
4. Click the **Reconnect at logon** box. If the folder is password protected, you will be prompted for the password when you log onto the network.

Sharing Folders

To prevent others on the network from accessing sensitive files on your computer, you can set the access level on a folder by adjusting the shared files properties. The shared properties can be changed to meet your file security needs.

File Security

Microsoft Networking enables file sharing at the folder level; that is, all the files in a folder must be either shared or not shared. You cannot share some files in a folder and keep others private at the same time.

If you want to share files on the network, it is recommended that you create a special folder for these files and share only that folder. This feature provides the flexibility of allowing file sharing while keeping secure all other programs and sensitive files on your hard drive.

Creating a Shared Folder

To create a shared folder on the hard drive, complete the following steps:

1. Double-click the **My Computer**  icon.
2. Double-click **C:** (or the letter that corresponds to your hard drive).
3. On the window menu bar, click **File**, point to **New**, then click **Folder**. A New Folder displays in the window.
4. Give the folder a name that indicates it is shared, such as **Shared Files**.
5. Move the files you wish to share into this folder.

Sharing a Folder

To share the folder, complete the following steps:

1. Locate the folder using Microsoft Windows Explorer.
2. Right-click the folder name.
3. Click **Sharing**.
4. Click **Shared As**.
The folder name displays automatically in the **Share Name** box. If you wish, you may change the share name.
5. Type a comment in the Comment text box. Typing a comment is optional.
6. Click the **Access Type** you wish to activate:
 - ❖ **Read-Only** - Others will only be able to read the files in the folder. They will not be able to make changes to any files.
 - ❖ **Full** - Others on the network will have read and write access to the file or contents of the folder. They will be able to change or possibly delete all the files in the shared folder.
 - ❖ **Depends on Password** - You may designate a **Read-Only** or a **Full Access** password.
7. Click **OK**.

Let's Get Digital

Introducing the Digital Creativity Imaging Center

(available on select models)

The Digital Creativity Imaging Center (DCIC) (available on select models) is the latest in digital interfaces coupled with imaging software. You can use it to perform the following tasks:

- ◆ Connect digital video camcorders and videophone cameras
- ◆ Input, capture, edit, and enhance full-motion video, audio, and photos
- ◆ Apply special effects to videos and 3-D titling for introductions
- ◆ Attach your saved files to e-mail or word-processing documents
- ◆ Create a custom background for your computer desktop

What Is A Digital Interface?

The DCIC is the connection point for digital equipment such as USB cameras, camcorders, and other devices. The DCIC is made up of two Universal Serial Bus (USB) connectors and one IEEE 1394 connector (designed to support rapid transfer of audio and video signals).

Check the guidelines for your particular digital equipment to determine which connector is required.

What is USB?

Universal Serial Bus (USB) is a peripheral bus standard that allows you to attach peripheral devices, such as gamepads, joysticks, scanners, and printers, among many others, to your computer, usually without having to reboot or reconfigure the system. This plug and play ability allows for quick and easy changes of your peripheral devices.

Visit www.compaq.com/mypresario or the USB Web site at www.usb.org for more information.

What is 1394?

The IEEE 1394 is an easy to use, plug and play, high-speed connector that interfaces between PCs, peripherals, and consumer electronics products. Some popular IEEE 1394 products are digital cameras, digital camcorders, digital VCRs, and digital audio players, with many new products constantly in development.

European Union Notice

Products with the CE marking complies with Telecommunication Terminal Equipment and Satellite Earth Station Equipment (TTE & SES) Directive (98/13/EC), the EMC Directive (89/336/EEC), and the Low Voltage Directive (73/23/EEC) issued by the European Community.

Compliance with these directives implies conformity to the following European Norms or Regulations (the equivalent international standards and regulations are in brackets):

- ◆ EN55022 (CISPR 22) – Electromagnetic Interference
- ◆ N50082-1 (IEC801-2, IEC801-3, IEC801-4) – Electromagnetic Immunity
- ◆ EN60555-2 (IEC 555-2) – Power Line Harmonics
- ◆ EN60950 (IEC950) – Product Safety
- ◆ CTR21 (ETSI TBR21) – Attachment requirements for connection to the analogue PSTNs of terminal equipment *

*Applies to modems contained in portable products only. Modems provided in desktop and mini-tower computers are approved to National standards.

The equipment has been approved in accordance with Council Decision 98/482/EC for pan-European single terminal connection to the Public Switched Telephone Network (PSTN). However, due to differences between the individual PSTNs provided in different countries, the approval does not, of itself, give an unconditional assurance of successful operation on every PSTN network termination point. In the event of problems, you should contact your equipment supplier in the first instance.

The equipment is designed to work with all EU telephone networks. However, the equipment may have interworking difficulties for some connections on the EU public networks. Dialing by loop disconnect pulses is not intended to be used on the PSTN. This feature is only supported in consideration of PBX or other equipment that requires pulse dialing. Network compatibility is dependent on software switch settings that are set automatically by the country selection. The user should contact the equipment supplier in case of difficulty in network settings.

Federal Communications Commission Notice

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception (which can be determined by turning the equipment off and on), the user is encouraged to try to correct the interference by one or more of the following measures:

- ◆ Reorient or relocate the receiving antenna.
- ◆ Increase the separation between the equipment and the receiver.
- ◆ Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- ◆ Consult the dealer or an experienced radio or television technician for help.

U.S. Regulations Governing the Use of Modems

This equipment complies with Part 68 of the FCC rules. Located on the bottom of the portable computers and on the modem in desktop computers is a label that contains, among other information, the FCC Registration Number and Ringer Equivalence Number (REN) for this equipment. Upon request, you must provide this information to your telephone company.

Ringer Equivalence Number (REN)

The REN is useful to determine the quantity of devices you may connect to your telephone line and still have all of the devices ring when your telephone number is called. In most areas (but not all), the sum of the RENs of all devices connected to one line should not exceed five (5.0). To be certain of the number of devices you may connect to your telephone line, as determined by the REN, you should contact your local telephone company to determine the maximum REN for your calling area.

The REN for the modem contained in this product does not exceed 1.0.

A FCC Compliant 6-position modular plug is provided with this equipment. This equipment is designed to be connected to the telephone network or premises wiring using a compatible 6-position modular jack that is FCC Part 68 Compliant.

If your telephone equipment causes harm to the telephone network, the telephone company may discontinue your service temporarily. If possible, they will notify you in advance. However, if advance notice is not practical, you will be notified as soon as possible. You will also be informed of your right to file a complaint with the FCC.

Your telephone company may make changes in its facilities, equipment, operations, or procedures that could affect the proper functioning of your equipment. If they do, you will be notified in advance to give you an opportunity to maintain uninterrupted telephone service.

If you experience trouble with this telephone equipment, contact your local telephone company for information on obtaining service or repairs. Your telephone company may ask that you disconnect this equipment from the network until the problem has been corrected or until you are sure that the equipment is not malfunctioning.

This equipment may not be used on coin service provided by the telephone company. Connection to party lines is subject to state tariffs.

Telephone Consumer Protection Act of 1991

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device to send any message via a telephone facsimile machine unless such message clearly contains, in a margin at the top or bottom of each transmitted page, or on the first page of the transmission, the date and time it is sent and an identification of the business, or entity, or individual sending the message and the telephone number of the sending machine or such business, or entity, or individual.

Canadian Regulations Governing the Use of Modems

Notice: The Industry Canada label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational, and safety requirements. The department does not guarantee the equipment will operate to the user's satisfaction.

Before installing the equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. In some cases, the company's inside wiring associated with a single-line individual service may be extended by means of a certified connector assembly (telephone extension cord). The customer should be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be made by an authorized Canadian maintenance facility designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.

Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines, and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

WARNING: Users should not attempt to make such connections themselves. Contact the appropriate electric inspection authority or an electrician. Power and telephone lines must always be properly grounded or physical harm may ensue.

Notice: The Ringer Equivalence Number (REN) assigned to each terminal device provides an indication of the maximum number of terminals allowed to be connected to a telephone interface. The termination on an interface may consist of any combination of devices, subject only to the requirement that the sum of the Ringer Equivalence Numbers of all the devices does not exceed 5.

The REN for the modem contained in this product does not exceed 1.0.

For the location of the authorized Canadian maintenance facility nearest you, call 800-652-6672 (800-OK-COMPAQ).

U.K. BABT Users Notice (SupraExpress 56i Pro Global Modem - Desktop Products Only)

The modem is intended for only use in the Compaq Internet PC. For the purposes of BABT approval, the modem is classified as a host-independent product.

Telephone Network Connection

The modem is suitable for connection to the Public Switched Telephone Network (PSTN) direct exchange lines and relevant branch systems (PBXs).

A ringer equivalent number (REN) is a value given to all apparatus to be connected to the PSTN. Its value can be taken and used to calculate the maximum number of equipment items that can be connected in parallel without impairing the performance of the standard bell circuit.

1. $REN = 3/n$ where n is the maximum number of units that may be used in parallel.
2. The maximum REN of a line is 4; therefore, the total REN of all apparatus connected to the line (obtained by summing the individual REN values) should not exceed 4. This value includes any BT provided instrument, each of which is assumed to have REN value of 1.0 unless otherwise stated. Exceeding the REN value of 4 may cause your telephone(s) to ring weakly or not ring at all.
3. Only one modem should be connected to a telephone line. Connecting a modem in parallel with one or more telephone instruments is not allowed.
4. The REN for this piece of equipment is 0.8.
5. The exchange should provide facilities for either loop disconnect (pulse) dialing or multifrequency (tone) dialing. The modem can be configured to operate with either system.
6. During dialing, this apparatus may tinkle the bells of other telephones using the same line. This is not a fault, and we advise you not to call the Fault Repair Service.
7. The modem specified in this guide is for the Compaq Internet PC.
8. This apparatus has been approved for the following facilities:
 - ❖ Connection to direct exchange lines providing DTMF signaling
 - ❖ Connection to compatible PBXs providing DTMF signaling
 - ❖ Operation in the absence of proceed indication, selectable by user
 - ❖ Call progress monitoring functions
 - ❖ Data modem functions
 - ❖ Auto-dialing functions
 - ❖ Auto-answering functions

Any other usage will invalidate the approval of the apparatus, if as a result, it then ceases to conform to the standards against which approval was granted.

All apparatus connected to this modem, and thereby connected directly or indirectly to the British Telecom Public Switched Telephone Network, must be approved apparatus as defined in Section 22 of the British Telecommunications Act of 1984.

Although this equipment can use either loop disconnect or DTMF signaling, only the performance of the DTMF signaling is subject to regulatory requirements for correct operation. It is therefore strongly recommended that the equipment is set to use DTMF signaling for access to public or private emergency services. DTMF signaling also provides faster call set up.

The modem may not be used on extension wiring that makes use of plug pins 1 and 6. If in doubt, advice must be obtained from a competent telecommunications engineer.

Difficulties may occasionally be experienced from other apparatus connected to the BT PSTN via the modem apparatus. Such difficulties may include the following:

- ◆ difficulty in making calls
- ◆ problems in telephone conversion being experienced by both parties to the call

Initially, normal operation will be possible. However, changes to or modernization of the network (taking place in the normal course of events) may result in the apparatus being connected to a network service with which it was not designed to be compatible. Failure of the apparatus to work under these circumstances may not be the responsibility of the network operator.

If these difficulties occur, contact your product supplier or your Compaq Authorized Reseller in the United Kingdom.

This device is intended for auto-answering of incoming calls. Under normal conditions, callers will be accustomed to calls being answered within 10 seconds, and a majority of callers will abandon calls that are not answered within 45 seconds.

Several options are available for auto-answering operation. The default setting is for two incoming rings. This is the recommended setting for normal operation by most computer users.

Auto Dialing with the Modem

When entering telephone numbers, ensure that the number that appears on the screen is correct before beginning to dial.

Speciale gebruiksinstructies voor Nederland

- Aansluitfactor**
1. Het modem is geschikt voor aansluiting op het openbare geschakelde telefoonnetwerk en op (analoge) telefooncentrales binnen bedrijven en instellingen.
 2. De aansluitfactor is een waarde die wordt toegekend aan alle apparaten die op het openbare telefoonnetwerk kunnen worden aangesloten. Met deze waarde kan worden berekend hoeveel apparaten maximaal parallel kunnen worden geschakeld. De maximale aansluitfactor van een lijn is 5. De aansluitfactor van alle apparaten die zijn aangesloten op één lijn mag daarom nooit hoger zijn dan 5. U berekent de aansluitfactor door de waarden van de afzonderlijke apparaten op te tellen.
 3. De aansluitfactor voor dit apparaat is 1,0.

Wachten op kiestoon Het modem moet altijd eerst een kiestoon ontvangen voordat wordt geprobeerd een verbinding tot stand te brengen. Deze vereiste kan niet worden uitgeschakeld met de opdracht ATX<n>.

New Zealand Modem Statements

The grant of a Telepermit for any item of terminal equipment indicates only that Telecom has accepted that the item complies with minimum conditions for connection to its network. It indicates no endorsement of the product by Telecom, nor does it provide any sort of warranty. Above all, it provides no assurance that any item will work correctly in all respects with another item of Telepermitted equipment of a different make or model, nor does it imply that any product is compatible with all of Telecom's network services.

This equipment is not capable, under all operating conditions, of correct operation at the higher speeds for which it is designed. Telecom will accept no responsibility should difficulties arise in such circumstances.

This device is equipped with pulse dialing while the Telecom standard is DTMF tone dialing. There is no guarantee that Telecom lines will always continue to support pulse dialing.

Use of pulse dialing, when this equipment is connected to the same line as other equipment, may give rise to bell tinkle or noise and may also cause a false answer condition. Should such problems occur, the user should not contact the Telecom Faults Service.

Some parameters required for compliance with Telecom's Telepermit requirements are dependent on the equipment (PC) associated with this device. The associated equipment shall be set to operate within the following limits for compliance with Telecom's Specifications:

1. There shall be no more than 10 call attempts to the same number within any 30 minute period for any single manual call initiation, and
2. The equipment shall go on-hook for a period of not less than 30 seconds between the end of one attempt and the beginning of the next attempt.

Where automatic calls are made to different numbers, the equipment shall go on-hook for a period of not less than 5 seconds between the end of one attempt and the beginning of the attempt.

The equipment shall be set to ensure that calls are answered between 3 and 30 seconds of receipt of ringing (S0 set between 2 and 10). This ensures the following:

1. A person calling your modem will hear a short burst of ringing before the modem answers. This confirms that the call has been successfully switched through the network.
2. Caller identification (which occurs between the first and second ring cadences) is not destroyed.

This equipment does not fully meet Telecom's impedance requirements. Performance limitations may occur when used in conjunction with some parts of the network. Telecom will accept no responsibility should difficulties arise in such circumstances.

This equipment should not be used under any circumstances which may constitute a nuisance to other Telecom customers.

This equipment shall not be set to make automatic calls to the Telecom 111 Emergency Service.

Batteries

For information about real-time clock battery replacement, contact your Compaq Authorized Dealer, reseller, or service provider.

WARNING: Your computer is provided with a battery-powered, real-time clock circuit. Danger of explosion and risk of personal injury exists if the battery is incorrectly replaced or mistreated. Do not attempt to recharge the battery, disassemble it, remove it, immerse it in water, or dispose of it in fire.

WARNING: This computer may contain a lithium-ion or nickel-metal-hydrate battery pack. There is a risk of fire and chemical burn if the battery pack is handled improperly. Do not disassemble, crunch, puncture, or short external contacts, dispose of in water or fire, or expose to temperatures higher than 140°F (60°C).

CAUTION: Do not dispose of batteries with general household waste. To dispose of them or recycle them, use the public collection system in accordance with local regulations or return them to Compaq, an authorized Compaq Partner, or the point-of-sale. In North America, dispose of nickel-metal-hydrate or lithium-ion batteries by taking advantage of the Compaq battery recycling program. You will be provided with a postage-paid battery pack mailer pre-addressed to a reclamation facility where the metals are recycled.

WARNING: Only authorized technicians trained by Compaq should attempt to repair this equipment. All troubleshooting and repair procedures are detailed to allow only subassembly/module-level repair. Because of the complexity of the individual boards and subassemblies, no one should attempt to make repairs at the component level or to make modifications to any printed wiring board. Improper repairs can create a safety hazard.

Using the Computer

WARNING: A very small portion of the population may experience epileptic seizures when viewing certain kinds of flashing lights or patterns that are commonly present in our daily environment. These persons may experience seizures while watching some kinds of television pictures or playing certain games, including games played on the Internet PC. Players who have not had any previous seizures may nonetheless have an undetected epileptic condition. Consult your physician if you experience any of the following symptoms while playing games: altered vision, muscle twitching, other involuntary movements, loss of awareness of your surroundings, mental confusion, or convulsions.

WARNING: Some studies have suggested that long periods of typing, improper workstation setup, incorrect work habits, or problems in your personal health may be linked to discomfort or serious injuries. Refer to your *Safety & Comfort Guide* for more information about choosing a workspace and creating a comfortable work environment.

Energy Compliance

Agency labels are on the computer.

Energy Star Compliance

Compaq Internet PC products marked with the Energy Star Logo are compliant with Energy Star Computers Program 2.0 standard of the U.S. Environmental Protection Agency (EPA). The EPA Energy Star Logo does not imply endorsement by the EPA. As an Energy Star Partner, Compaq Computer Corporation has determined that products marked with the Energy Star Logo meet the Energy Star guidelines for energy efficiency.

The Energy Star Computers Program was created by the EPA to promote energy efficiency and reduce air pollution through more energy-efficient equipment in homes, offices, and factories. Compaq products achieve this standard by reducing power consumption when not being used. Instructions for using the energy saving features of your computer are located in the power management section of the documentation that came with your computer.

The power management feature of your computer is supported when used with the following operating system: Microsoft Windows Operating System.

The power management feature, when used in conjunction with an external Energy Star compliant monitor, will support the power-down features of the monitor. The power management feature allows an external monitor to go into low-power mode when the screen saver timeout occurs. To take advantage of these energy savings, the monitor's power management feature has been preset to power down the monitor after a period of system inactivity. Refer to the power management section of the documentation that came with your computer for instructions on modifying or disabling this feature.

CAUTION: Using the Energy Save Monitor feature with non-Energy Star compliant monitors may cause video distortion when the screen saver timeout occurs.

CAUTION: The power management feature is not compatible with some non-Compaq bus-mastering ISA devices. Using the power management feature with some of these devices may cause errors when the system is placed in the low power state.
