- **Note:** Be sure to install the card properly to avoid reopening your computer later.
- 5 If you removed a screw from a PCI slot faceplate, screw it into the corresponding end of the Ethernet card faceplate.
- **6** Reinstall the cover on the computer.
- 7 Reconnect the cables to the computer as noted in step 4 of "before you begin."

2 The computer operating system automatically recognizes the new Ethernet card and launches the New Hardware Wizard. Click **Next**.

- Accept the default selection, search for a better driver (the wording varies among Windows operating systems). Then click Next.
- 4 If you see a window that reads, "Windows will search for a new driver in its driver database...," click the **CD-ROM drive** box and then click **Next**.
- 5 The computer operating system automatically finds and installs the correct driver. Once a successful installation is reported, click **Finish**.
- 6 If the wizard asks you for permission to restart the computer, click **Yes**. If the wizard does not appear, restart the computer.

registering the Ethernet card

Make sure you register your product with HP after the installation process is complete. Enter the following into the address window of your Web browser (such as Internet Explorer or Netscape):

http://register.hp.com

Then press **Enter**.

troubleshooting

- When I restart the computer after installing the Ethernet card, Windows doesn't detect the card and launch the New Hardware Wizard.
 - Verify that you inserted the card securely in the PCI slot.
 - Try inserting the card into a different PCI slot.

6

- **2** The New Hardware Wizard cannot find the driver for the Ethernet card.
 - You are probably on a window that reads: "Windows was unable to locate the software for this device...." Click
 Back as instructed. Be sure the CD-ROM is inserted in the CD-ROM drive of your computer and that the CD-ROM drive option checkbox is checked. Click Next. The wizard should locate and install the correct driver.
- **3** The card and driver are installed, but I can't connect to the network.
 - Verify that your computer is properly configured to work with your network (see the documentation for your Gateway, router, switch, or hub).
