Using the Optical Mouse

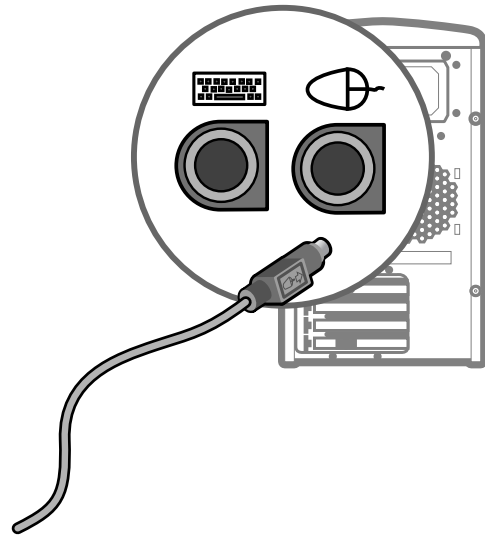

Using the Optical Mouse

Your optical mouse uses a light, instead of a roller ball, to sense movement. Use the optical mouse on an opaque surface.

Important: *The optical mouse does not work on a glass, translucent, or reflective surface.*

To Install the Optical Mouse

- 1 Turn off the PC.
- 2 Plug the optical mouse cable to the green connector for the mouse on the back of the PC.

- 3 Turn on the PC. Your mouse can now be used.

Note: *The PC doesn't recognize the mouse if you connect it when the PC is on. You must restart the PC after connecting the optical mouse.*
