

Accessing WLAN Software and Documentation

HP provides wireless local area network (WLAN) software with all notebooks that feature an integrated WLAN device. If your computer is running:

- Microsoft Windows® XP—The native operating system supports basic WLAN configuration. However, you must install the HP WLAN software if you plan to use Cisco Client Extensions.
- Microsoft Windows 2000—The native operating system does not support WLAN configuration. To use your integrated WLAN device, you must install the HP WLAN software.

The procedures for installing the WLAN software and accessing the WLAN software documentation have changed since the publication of your model-specific documentation. To access WLAN software and documentation, follow the instructions on this card rather than the instructions in your model-specific guides.

Identifying a WLAN Device

To install HP WLAN software for an integrated WLAN device, you need to know the name of the integrated WLAN device. To identify any integrated WLAN device on your computer:

1. Display the names of all the network adapters on your computer.
 - In Windows XP—Select Start > My Computer. Right-click on the My Computer window, then select Properties > Hardware tab > Device Manager > Network Adapters.
 - In Windows 2000—Select Start > Settings > Control Panel > System icon > Hardware tab > Device Manager > Network Adapters.
2. Identify a WLAN adapter from the list that is displayed.
 - The listing for a WLAN adapter includes the term **wireless LAN, WLAN, or 802.11**.
 - If no WLAN adapter is listed, either your computer does not have an integrated WLAN device, or the driver for the WLAN device is not properly installed.
