Index
What is an embedded Web server?

A Web server provides an environment in which Web programs can run, in much the same way that an operating system, such as Microsoft® Windows®, provides an environment in which programs can run on your computer. A Web browser, such as Microsoft Internet Explorer, Apple Safari, or Mozilla, can show output from a Web server.

An embedded Web server (EWS) resides on a hardware product (such as a printer) or in the firmware, rather than as software that is loaded on a network server.

The advantage of an embedded Web server is that it provides an interface to the product that anyone who has a network-connected computer and a standard Web browser can open and use. No special software needs to be installed or configured.

With the HP Embedded Web Server, you can view product status information, change settings, and manage the product at your computer.

Note

In this guide, the terms “product” and “device” are used interchangeably. When products or devices are discussed in this guide, the information pertains to HP LaserJet printers, HP Color LaserJet printers, and HP LaserJet MFPs, unless otherwise noted. For specific information about the features that your printer or multifunction peripheral (MFP) supports, see the documentation that came with your product.
Features

You can use the HP Embedded Web Server to view product and network status and to manage printing functions from your computer, rather than at the product control panel. With the HP Embedded Web Server, you can perform these tasks:

- View control-panel messages and product-status information.
- Determine the remaining life for all supplies and configure specific ordering information for supplies.
- Gain access to the product's technical support page.
- Gain access to specific support for recent product events.
- Add or customize links to other Web sites.
- View and change product configuration, such as tray configurations.
- View and change network configuration.
- View and print information pages, such as the Configuration page.
- Receive alerts about product events, such as when the product is low on supplies, through e-mail.
- Select the language in which to display the HP Embedded Web Server screens.
- Print to an HP product without having to install the product printer driver.
- Conserve energy by scheduling the product sleep delay so that the product will go into sleep mode after a period of time of not being used.
- Schedule wakeup times for each day so that the product has finished initializing and calibrating by the time it is to be used.
- Send product configuration and supplies usage information periodically to your service provider.

Additional features with a permanent storage device

If you have a permanent storage device installed in your product, such as a hard disk, you can view, set up, and retain additional information.

- Alerts. Set up four different destination lists, with up to 20 recipients on each of the four lists. (Without the permanent storage device, you can send alerts to only four e-mail addresses.)
- Other Links. Add up to five additional links to the Web sites of your choice. (Without the extra storage, you can add one additional link.)

A hard disk might be installed in your product, depending on the product model. If your product does not have a hard disk, you might be able to order one. For more information, see the user guide that came with your product, or go to:

HP Web Jetadmin and the HP Embedded Web Server

HP Web Jetadmin is a Web-based system management tool that you can use with a Web browser. The HP Embedded Web Server and HP Web Jetadmin work together to meet all of your product-management needs. You can use the software to install and manage networked products effectively. Network administrators can manage networked products remotely, from practically anywhere.

The HP Embedded Web Server provides a simple, easy-to-use solution for one-to-one product management in environments that have a limited number of products. However, in environments that have several products, you might want to use HP Web Jetadmin to manage groups of products. With HP Web Jetadmin you can discover, manage, and configure multiple products simultaneously.

HP Web Jetadmin is available from HP online support (http://www.hp.com/go/webjetadmin).
System requirements

In order to use the HP Embedded Web Server, you must have the following components:

- A supported Web browser. EWS-supported Web browsers include (but are not limited to) the following:
  - Konqueror 3.0 or later
  - Microsoft Internet Explorer 6.0 or later
  - Mozilla 1.0 (and Mozilla derivatives)
  - Netscape Navigator 6.2 or later
  - Opera 7.0 or later
  - Safari 1.0 or later
- A transmission control protocol/Internet protocol- (TCP/IP-) based network connection.
- An HP Jetdirect print server (embedded or enhanced input/output [EIO]) installed in the product.

Opening the HP Embedded Web Server

Use the following procedure to open the HP Embedded Web Server.

Note You cannot view the HP Embedded Web Server screens from outside of a firewall.

1. Open a supported Web browser.
2. In the Address or Go to field, type the Internet protocol (IP) address that is assigned to the product (for example, http://192.168.1.1) or the host name (for example, npi[XXXXXX] or a configured host name such as http://www.[your_server].com).

If you do not know the IP address for the product, you can find it on the Configuration page. See the user guide that came with your product to see how to print a Configuration page at the control panel.

Login and logoff

The HP Embedded Web Server (EWS) has screens that can be used to view product information and change configuration options. The screens that appear, and the settings on them, vary according to how you gain access to the EWS: as a general user, an information technology (IT) administrator, or a service provider. These passwords can be customized by an IT administrator or a service provider.

In a password-protected HP Embedded Web Server, only the Information tab is available to users who do not log in by using the password. If no password has been set (which is the default), all of the tabs are visible.

If a password has been set, you must log on as an IT administrator or a service provider to gain access to the protected HP Embedded Web Server tabs (Settings, Digital Sending, and Networking).

Note For information about changing passwords as an IT administrator, see “Security” on page 31. If you are a service provider, see your product service guide.

To log in as an administrator

Use the following procedure to log in to the HP EWS as an administrator.
1 After you open the EWS, click the Log In link in the upper-right corner of the screen. The Enter Network Password dialog box appears, as shown in the following illustration. The appearance of the login screen might vary, depending on your operating system and browser.

![Login Screen Illustration]

2 Type admin for the user name, type your password, and then click OK.

**To log off as an administrator**

Use the following procedure to log off.

1 Click the Log Off link.
2 To complete the logoff, close the browser.

---

**CAUTION** If you do not close the browser, the connection to the product EWS continues to run and could pose security risks.
Navigating through the HP Embedded Web Server

To navigate through the HP Embedded Web Server screens, click one of the tabs (such as **Information** or **Settings**), and then click one of the menus on the navigation bar that is located on the left side of the screen.

The following illustration and table provide information about the EWS screens.

**Note**

The appearance of the EWS screens might differ from the illustrations in this user guide, depending on the product features and the settings that your IT administrator has established.

Viewing product status from the Information screens

The Information screens are for informational purposes only; you cannot configure the product from these screens. To configure the product through the EWS, see “Configuring the product from the Settings screens” on page 19.

The following are the Information screens:

- Device Status (page 8)
- Configuration Page (page 10)
- Supplies Status (page 12)
- Event Log (page 13)
- Usage Page (page 14)
- Device Information (page 15)
- Control Panel (page 16)
- Print (page 17)

Note: Some products do not support all of these screens.
Device Status

Use the Device Status screen to view the current status of the product. The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>
<td>For more information, see “Navigating through the HP Embedded Web Server” on page 5.</td>
</tr>
<tr>
<td>2</td>
<td>Status</td>
<td>Shows the product status (the same information that appears on the control-panel display).</td>
</tr>
<tr>
<td>3</td>
<td>Control-panel buttons</td>
<td>Use these control-panel buttons just as you would at the product. To select which control-panel buttons appear on this screen, go to the Security screen on the Settings tab.</td>
</tr>
<tr>
<td>4</td>
<td>Supplies</td>
<td>Shows the percentage of life remaining for each supply.</td>
</tr>
<tr>
<td>Callout</td>
<td>Area on the screen</td>
<td>Information or capability that the area provides</td>
</tr>
<tr>
<td>--------</td>
<td>---------------------</td>
<td>---------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>5</td>
<td>Supplies Details</td>
<td>Opens the Supplies Status screen, where you can view information about product supplies.</td>
</tr>
<tr>
<td>6</td>
<td>Media</td>
<td>Shows the status and configuration information for the input trays and output bins.</td>
</tr>
<tr>
<td>7</td>
<td>Change Settings</td>
<td>Opens the Other Settings screen, where you can change the paper-type settings.</td>
</tr>
<tr>
<td>8</td>
<td>Capabilities</td>
<td>Lists components that are installed in the product.</td>
</tr>
</tbody>
</table>
Use the Configuration Page screen to view current product settings, help troubleshoot printer problems, and verify the installation of optional accessories such as dual inline memory modules (DIMMs) or paper-handling devices. The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Configuration Page</th>

Supplies Status

The Supplies Status screen shows more detailed supplies information and provides part numbers for genuine HP supplies. (It is helpful to have the part numbers available when ordering supplies.) The following illustration and table describe how to use this screen.

Note: See the table on the following page for descriptions of the callouts in this illustration.

Recycling Information:
Please return your used genuine HP supplies to Hewlett-Packard. For more information see: http://www.hp.com/go/recycle
The Event Log shows the most recent product events, including jams, service errors, and other printer errors. The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>

</tr>
<tr>
<td>4</td>
<td>Long-Life Supplies Information</td>
<td>If available, this lists the percent of life remaining and the estimated number of pages remaining with the supply.</td>
</tr>
</tbody>
</table>

**Event Log**

The Event Log shows the most recent product events, including jams, service errors, and other printer errors. The following illustration and table describe how to use this screen.
Usage Page

The Usage Page screen gives a page count for each size of media that has passed through the product, as well as the number of duplexed pages. The total is calculated by multiplying the sum of the print count values by the Units value.

The information on this screen can be used to determine how much toner or paper to keep on hand. The following illustration and table describe how to use this screen.

Note: See the table on the following page for descriptions of the callouts in this illustration.
### Device Information

The Device Information screen shows the product name, asset number, company name, contact person, product location, and the product's IP address, name, model, and serial number.

The product name, asset number, company name, contact person, and product location can be configured from the Device Information screen, which is located on the Settings tab.

<table>
<thead>
<tr>
<th>Callout</th>

**Device Information**

- **Device Name**: HP Color LaserJet XXXX MFP
- **Device Location**: Floor 7, Room 2
- **Asset Number**: 100.168.0.10
- **Company Name**: Your Company
- **Contact Person**: Anyone
- **Product Name**: HP Color LaserJet XXXX MFP
- **Device Model**: CXXXXX
- **Device Serial Number**: XXXXXXXXXXXX

---
Control Panel

For products that have a control panel, the Control Panel screen shows the product control-panel display as if you were standing at the product. Because this view shows the product status, it can help you troubleshoot problems with the product.

Note The appearance of the screen might vary, depending on your product.
You can use this screen to print one file at a time from a product that supports the HP Embedded Web Server. This feature is especially useful if you are a mobile user, because you do not have to install the product's printer driver in order to print—you can print anywhere at any time.

You can print print-ready files, such as documents that have been generated by using a “print to file” driver option. Print-ready files commonly have file name extensions such as .PRN (Windows Print Ready File), .PCL (Printer Control Language), .PS (PostScript), .PDF (Adobe Portable Document Format), and .TXT (text).

The following illustration and table describe how to use this screen.

**Note**

The Print screen (and the **Print** menu on the left) is available only if it has been configured to appear on the **Security** tab. For more information, see “Security” on page 31.

---

### Callout | Area on screen | Information or capability that the area provides
---|---|---
1 | EWS tabs and menus | For more information, see “Navigating through the HP Embedded Web Server” on page 5.
2 | Device Status | Shows the product status (the same information that appears on the Device Status screen and the control-panel display).
3 | Option 1 | Prints a file that is located on your laptop, computer, or a network file server.
4 | Option 2 | Prints a file that you can gain access to over your intranet.

---

Choose File

Option 1

Select the document to download from your hard disk or network file server.

Option 2

Input the address of the document to access via the web. Type the address in a form such as:

http://www (your_server)/com/morefile.ps

Address

[Apply] [Cancel]
Printing a file from the Print screen

Use the following steps to print a file from the Print screen.

1. Select the file that you want to print by using one of the following options:
   - Click the button under Option 1 to browse to a file that you want to print.
   - or-
   - Type the address (beginning with “http://”) in the Address field (under Option 2) to print a file that is available over your intranet.

2. Click Apply.
Configuring the product from the Settings screens

Use the screens on the **Settings** tab to configure the product from your computer. The following are the Settings screens:

- Configure Device (page 20)
- E-mail Server (page 21)
- Alerts (page 23)
- AutoSend (page 29)
- Security (page 31)
- Edit Other Links (page 32)
- Device Information (page 34)
- Language (page 35)
- Date & Time (page 36)
- Wake Time (page 37)

**Note** Some products do not support all of these screens.
Configure Device

You can use the Configure Device screen to print product information pages and configure the product remotely. The following illustration, table, and example procedure describe how to use this screen.

If your product has a control-panel display, these menus are similar to the menus that are available at your product control panel. Some of the product control-panel menus are not available from the HP Embedded Web Server.

See the documentation that came with your product for more information about the different menus that your product supports.

---

</tbody>
</table>
Using the menus on the Configure Device screen

The following procedure is provided only as an example. Similar procedures can be used to set other menu items.

Follow these steps to select a different default paper size (example procedure).

1. Click PAPER HANDLING.
2. Select Letter from the list, and then click Apply to save the change.

Note

Printer drivers and software programs frequently override selections that are made on the Printing menu and the Paper Handling menu. For more information, see the user guide that came with your product.

Any changes are reflected on the Printer Status screen, the Configuration Page screen, and the Paper Handling menu.

E-mail Server

Use the E-mail Server screen to configure e-mail settings for outgoing and incoming e-mail. Use the settings on this screen to send and receive e-mail messages, including product alerts. The following illustration, table, and procedures describe how to use this screen.
Configuring outgoing e-mail

You must configure outgoing e-mail if you intend to use the Alerts or AutoSend features.

1. Gather the following information. (Your organization’s network or e-mail administrator typically provides the information that is required to configure outgoing mail.)
   - The IP address of the simple mail transfer protocol (SMTP) mail server on your network. The EWS uses the SMTP server IP address to relay e-mail messages to other computers.
   - The e-mail domain name suffix that is used to address e-mail messages within your organization.

2. Select the **Enable Outgoing E-mail** check box.

3. Type the SMTP server IP address in the **SMTP Server** text box.

4. Type the domain name, and then click **Apply** to save the changes.

Configuring incoming e-mail

You should configure incoming e-mail if you intend to request information pages from the product by using e-mail messages. For more information, see “Sending e-mail commands to the product” on page 28.

1. Establish a Post Office Protocol 3 (POP3) mailbox account for the product on a mail server within your organization’s network.

   Each POP3 account requires a username and a password. The username combined with the product’s domain name (which is specified in the outgoing mail configuration) is the e-mail address for the product. For example, if the POP3 mailbox account username is “product” and the POP3 server is “hp.com”, the product’s e-mail address is “product@hp.com”.

   **Note**
   
   Each product that is configured for incoming mail must have its own POP3 mailbox account on your network’s e-mail server.

   The POP3 mailbox accounts are typically configured by your organization’s network or e-mail administrator.

2. Select the **Enable Incoming E-mail** check box.

3. Type the IP address of the POP3 mail server in the **POP3 Server** text box.

4. Type username and password for the product’s mailbox account, and then click **Apply** to save the changes.
From the Alerts screen, IT administrators can set up the product to send problem and status alerts to anyone through e-mail messages. When this function is configured, alerts are automatically triggered about supplies and paper-path status, as well as for service and advisory information. More than one individual can receive alerts, with each person receiving only specific alerts. For example, an administrative assistant might be responsible for ordering toner or fixing jams, and could receive advanced warning when toner is low or a jam occurs. Similarly, the long-life supplies might be handled by an external service provider, who could receive alerts about performing product maintenance, loading the front or rear stapler, and similar needs.

With a permanent storage device installed, such as a hard disk, you can create up to four different destination lists, with up to 20 recipients on each list. (Without the permanent storage device, you can send alerts to only four e-mail addresses.) The following example is for a product that has a permanent storage device installed. If a permanent storage device is installed, you can edit, test, and delete destinations and destination lists.

The following illustration, table, and procedures describe how to use this screen.

**Note**

In order for alerts to function, outgoing e-mail must be enabled. To enable outgoing mail, see “Configuring outgoing e-mail” on page 22.

**Alerts**

Alerts are currently configured for the following destination lists. To make changes, click the appropriate button next to the list. Move the pointer over a button for more information.

**Note:** In order for alerts to function, outgoing mail must be configured on the E-mail Server page.

<table>
<thead>
<tr>

</tbody>
</table>

To configure alerts

With a permanent storage device installed, you can set up four different lists, with up to 20 recipients on each list. Without a permanent storage device, you have room for only four e-mail addresses.

1. Do one of the following:
   - To create a new destination list, click **New Destination List**.
   - Or-
   - To modify an existing destination list, click **Edit** next to the list that you want to modify.
If a permanent storage device is installed, the screen that appears looks similar to the following illustration.

2 For products that have permanent storage devices installed, type a name in the **List Name** field, such as Service or Supplies. (If you do *not* have a permanent storage device, continue to step 3.)
3 Type the e-mail addresses for people who you want to receive alerts. In large environments, system administrators can route e-mail addresses to list servers, uniform resource locators (URLs), and mobile devices for expanded alerts. Add multiple destinations by separating each destination with a comma or semicolon.

4 Select the check box for the alerts that you want to be sent with this destination list. (To see all of the alerts that are available for the product, click Show All Alerts.)

5 Where applicable, set the threshold value for the individual alerts.

   The threshold value for service alerts and for the paper-path alerts is a user-specified number of minutes. This is the amount of time that an event will be ignored before an e-mail alert message is sent. For example, you might want to set the threshold value for the “Tray Open” alert to 10 minutes to allow someone to close the tray after loading the tray or clearing a jam.

6 Select the attachments that you want to be included with your e-mail alert messages. These attachments can include Supplies Status Page, Usage Page, Configuration Page, Event Log Page, and XML Data. (Go to the Information tab to see examples of the pages.) The XML Data option should be selected if one of the destinations you have chosen to receive alerts is an automated computer system. Each item that you select will be attached to the e-mail. For example, if you select Usage Page and Event Log Page, you will receive one e-mail message with two attachments, one for each selection. If you also select the XML Data option, you will receive one e-mail message with three attachments—one attachment for the Usage Page in HTML, one for the Event Log in HTML, and a third consisting of instant support information in a text file attachment that has an .XML extension.

7 Click Apply to save the information.

8 Repeat steps 1 through 7 for each additional list or destination.

---

**Note**

To test the configuration of a destination list, see “To test the configuration of a destination list” on page 27.
To test the configuration of a destination list

Use the following procedure to test the destination list configuration.

1. Click the **Test** button next to the destination list that you want to test.

   The following window appears. (This illustration shows the screen from a system that has a permanent storage device installed. If no permanent storage device is installed, only one destination can be tested from this window.)

   ![Alerts - test window](image)

   **Alerts - test**

   You are about to send a test alert to the selected alert destinations. Click **OK** to send the test, or click **Cancel** to return to the main Alerts page without sending the test.

   **Alert Destinations:**
   - your_name@your.company.com
   - anyone@your.company.com

   By default, the return address on the test alert is the product’s e-mail address. To receive any response that is generated from this test, type your own e-mail address in the following box.

   **Return Address:** Device 1@your.company.com

   **Message Text:**
   This is a test alert. You have received this alert because you have been selected to receive information about the following product.

   The product does not need attention at this time.

   **Product:**
   HP Color LaserJet XXXX MFP

   **Currently selected alerts:**
   - Cartridge Low (Color)
   - Cartridge Out (Replacement)
   - Paper Jam
   - Tray Open

   **Currently selected attachments:**
   - Supplies Status Page
   - Usage Page

   Thank you for using Hewlett-Packard products!

   If you want additional notes to appear at the beginning of the test alert, type the information in the following box.

   **Your Notes (optional):**

2. If you have a permanent storage device installed, select the destinations that you want to test.

3. The return address is the product’s e-mail address. Type your e-mail address in the **Return Address** box if you would like to receive messages about any errors that are generated from the test alert (for example, to be notified of an incorrect destination address).
If applicable, type additional information that you would like to appear at the beginning of the e-mail alert message in the **Your Notes (optional)** text field.

Click **OK**.

**To delete destinations and destination lists**

You can delete a destination or destination list by clicking the **Delete** button next to the destination or destination list that you want to delete. Click **OK** to confirm the deletion.

**Sending e-mail commands to the product**

Another method for receiving information pages is by requesting them from the product. When outgoing and incoming mail are configured, the product can attach information pages, such as the Supplies Status page or the Configuration page, to e-mail messages. You can use this feature to solve a problem or check the status of supplies.

**To request information pages by using an e-mail message**

When composing a message to the product, you must format the **To**, **From**, and **Subject** fields correctly in your e-mail program.

1. Make outgoing and incoming e-mail functions available by following the instructions that are listed in this chapter. (For more information, see “E-mail Server” on page 21.)

2. From your e-mail program, compose a message to the product by completing the following steps:
   a. In the **To** field, type the product’s e-mail address. The username combined with the product’s domain name (which is specified in the outgoing mail configuration) is the e-mail address for the product. For example, if the POP3 mailbox account username is “product” and the POP3 server is “hp.com”, the product’s e-mail address is “product@hp.com”.
   b. Your e-mail program should automatically complete the **From** field with your return e-mail address.
   c. In the **Subject** field, type the appropriate text for the format and page that you would like to attach. You can request a Configuration page, a Supplies Status page, or an AutoSend page. For example, if you would like to attach the Configuration page in .HTML file format, type “this.configpage?configpage=email&format=html”.

3. Click **Send**.

The product checks for new e-mail messages once every 3 minutes. When the product receives the e-mail message, it generates a reply and sends the requested information back to the sender's e-mail address (as specified in the **From** field of the original e-mail message).

**Note**

Depending on delays in the network and your organization’s mail server, a response might take from 1 minute to several hours to arrive in your e-mail program’s Inbox.

If the **To**, **From**, and **Subject** fields are not correctly formatted in your e-mail message, the product does not send a message in response.
Use the AutoSend screen to send product-configuration and supplies-usage information periodically to your service provider. This feature establishes a relationship with Hewlett-Packard Company or another service provider to provide you with services that include, but are not limited to, toner replacement, pay-per-page contracts, support agreements, and usage tracking. The following illustration, table, and procedure describe how to use this screen.

With a permanent storage device installed, such as a hard disk, you can add up to twenty e-mail addresses. (Without the permanent storage device, you can add one e-mail address.) The following example is for a product that does have a permanent storage device installed.

1. Configure Device
2. Alerts
3. AutoSend
4. Security
5. Edit Other Links
6. Device Information
7. Language
8. Date & Time
9. Wake Time

**Enable AutoSend**

Select this check box to turn on the AutoSend feature.

**Send every [interval]**

Select the interval at which you want the product to send the product configuration and supplies usage information to the destinations that are configured in the **E-Mail destinations** field.

**E-Mail destinations**

Save a list of up to 20 e-mail addresses to receive the product-configuration information. Each e-mail address can be up to 50 characters long.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>
<td>For more information, see “Navigating through the HP Embedded Web Server” on page 5.</td>
</tr>
<tr>
<td>2</td>
<td>Enable AutoSend</td>
<td>Select this check box to turn on the AutoSend feature.</td>
</tr>
<tr>
<td>3</td>
<td>Send every [interval]</td>
<td>Select the interval at which you want the product to send the product configuration and supplies usage information to the destinations that are configured in the <strong>E-Mail destinations</strong> field.</td>
</tr>
<tr>
<td>4</td>
<td>E-Mail destinations</td>
<td>Save a list of up to 20 e-mail addresses to receive the product-configuration information. Each e-mail address can be up to 50 characters long.</td>
</tr>
</tbody>
</table>
To turn on the AutoSend feature

Use the following procedure to make the AutoSend feature available.

1. Make outgoing and incoming e-mail functions available by following the instructions that are listed in this chapter. (For more information, see “E-mail Server” on page 21.)

2. Select the **Enable AutoSend** check box.

3. Click an option to specify the interval at which you want the product to send the product-configuration and supplies-usage information to the e-mail recipients (determined in the next step), and then type the number of days, weeks, months, or pages printed.

4. For products with permanent storage devices installed, configure up to 20 destination e-mail addresses, using the format that appears on the screen. (If you do not have a permanent storage device, you can configure one e-mail address.)

5. To send device configuration and supplies status information to HP, select the **Send to HP** check box.

6. Click **Apply**.
The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>

<tr>
<td>2</td>
<td>Set Password</td>
<td>Set an administrator password to control who can gain access to the EWS Settings, Digital Sending, Networking tabs. After the password has been set, users are prompted to type a password when they click the Log In link. For more information, see “Login and logoff” on page 3.</td>
</tr>
<tr>
<td>3</td>
<td>Print Page</td>
<td>Select to make the Print Page screen available in the Information tab.</td>
</tr>
</tbody>
</table>
Edit Other Links

Use the Edit Other Links screen to add or customize up to five links to the Web sites of your choice (see the following note). These links appear throughout the HP Embedded Web Server screens, in the Other Links box beneath the left navigational bar. Three permanent links (hp instant support, Order Supplies, and Product Support) have already been established. The following illustration, table, and procedures describe how to use this screen.

Note

With a permanent storage device installed, you can add up to five additional links; without the extra storage, you can add one additional link.
Adding a link

Use this procedure to add a link.

1. Under **Add Link**, type the URL and the name of the link as you would like it to appear in the HP Embedded Web Server.
2. Click **Add Link**.

Removing a link

Use this procedure to remove a link.

1. Under **User-defined Links**, select the link or links that you would like to remove.
2. Click **Remove Selected Link**.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>

</tr>
</tbody>
</table>
Device Information

Use the Device Information screen to provide a name of your choice for the product, assign an asset number, and configure the company name, the person to contact about the product, and the physical location of the product. The product IP address, product name, product model, and serial number are also available on this screen.

Note

If you make any changes on the Device Information screen, click Apply to save the changes.

The information that is typed here appears on the Device Information screen that can be opened from the Information tab. It also appears in e-mail messages that are sent from the product. This might be useful if you need to locate the product to replace supplies or fix a problem.
Language

Use the Language screen to select the language in which the HP Embedded Web Server screens appear. The following illustration and table describe how to use this screen.

**CAUTION**
Selecting **View Pages in Printer Language** or **Select a Language** changes the language for everyone who uses the HP Embedded Web Server.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>
<td>For more information, see &quot;Navigating through the HP Embedded Web Server&quot; on page 5.</td>
</tr>
<tr>

<td>View Pages in Browser Language (this is the default)</td>
<td>Use this feature to detect which language is selected for your Web browser. The HP Embedded Web Server screens appear in the same language.</td>
</tr>
<tr>
<td>3</td>
<td>View Pages in Printer Language</td>
<td>Use this feature to detect which language is selected for the product control panel. The HP Embedded Web Server screen appear in the same language.</td>
</tr>
<tr>
<td>4</td>
<td>Select A Language</td>
<td>Select the language for the HP Embedded Web Server screens from these choices: English, Français (French), Deutsch (German), Italiano (Italian), Español (Spanish), Svenska (Swedish), Dansk (Danish), Norsk (Norwegian), Nederlands (Dutch), Suomi (Finnish), Português (Portuguese).</td>
</tr>
</tbody>
</table>

**Note**
The default language is the language that the Web browser is currently using. If your browser and control panel both use a language that is not available for the HP Embedded Web Server, English is selected as the default.

If you make any changes on the Language screen, click **Apply** to save your changes.
Date & Time

Use the Date & Time screen to update the product time. The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>

<td>Date/Time Format</td>
<td>Click this button to open a screen where you can select the date and time format.</td>
</tr>
<tr>
<td>4</td>
<td>Get Time</td>
<td>Click this button to update the product date and time on the screen.</td>
</tr>
</tbody>
</table>
An IT administrator can use the Wake Time screen to schedule product wakeups on a daily basis. For example, the product can be set to wake up at 07:30, so the product has finished initializing and calibrating and is ready to use by 08:00. The administrator only sets one wakeup setting per day; however, each day can have a different wakeup setting. Additionally, to save energy, the sleep delay can be set to turn the product off after a specific period of inactivity.
Setting the digital sending options

Administrators can use the Digital Sending screens to control the digital-sending features that some products offer. The following are the Digital Sending screens:

- General (page 40)
- Send to E-mail (page 41)
- Send to Fax (page 44)
- Addressing (page 48)
- Address Book (page 51)
- Activity Log (page 52)
- Preferences (page 53)

**Note** Some products do not support all of these screens.
General

Use the General screen to set digital-sending administrator information. The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 EWS tabs and menus</td>
<td>For more information, see “Navigating through the HP Embedded Web Server” on page 5.</td>
</tr>
<tr>
<td>2 Help</td>
<td>Click to open a help file that contains information about the screens on the Digital Sending tab.</td>
</tr>

<td>7</td>
<td>Quality</td>
<td>Select the resolution for the outgoing faxes.</td>
</tr>
<tr>
<td>8</td>
<td>Billing Code</td>
<td>Type the billing code, if applicable. If you want to, you can select the <strong>Editable by User</strong> check box to allow the user to change the code. Use the Minimum Length field to set the minimum length of the billing code. The billing code can be a value between 1 and 16.</td>
</tr>
</tbody>
</table>
Advanced Fax Settings

The following illustration and table describe how to use this screen.

Note: See the table on the following page for information about the callouts.
<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>
<td>For more information, see &quot;Navigating through the HP Embedded Web Server&quot; on page 5.</td>
</tr>
<tr>
<td>2</td>
<td>Help</td>
<td>Click to open a help file that contains information about the screens on the Digital Sending tab.</td>
</tr>
<tr>
<td>3</td>
<td>General</td>
<td>Select the general settings, such as modem and ringer volume and whether to turn JBIG compression and Error Correction on or off. You can also select whether or not to overlay the header (phone number, time, and date), so that it covers only a small part of the top of the page.</td>
</tr>
<tr>
<td>4</td>
<td>Send</td>
<td>Select the settings for faxes that are sent from the product, such as dial tone and how many times you want the product to retry if the receiving fax line is busy or does not answer.</td>
</tr>
<tr>
<td>5</td>
<td>Receive</td>
<td>Select the settings for received faxes, such as which output bin the faxes are to be delivered, if you want incoming faxes to be scaled to the size of paper in the input tray, and the number of another fax product to which incoming faxes can be forwarded.</td>
</tr>
<tr>
<td>6</td>
<td>Print Activity Log</td>
<td>Click this button to print the internal modem's fax activity log. The activity log lists all incoming and outgoing fax calls since the log was last cleared and is printed to the product.</td>
</tr>
<tr>
<td>7</td>
<td>Clear Activity Log</td>
<td>Click this button to clear all entries in the fax activity log. HP recommends printing the fax activity log periodically for record-keeping purposes, and then clearing the fax activity log to keep its size to a minimum.</td>

<td>Security</td>
<td>Click this button to set the security features for the internal modem. The first time you configure the security features, you are asked to type (and confirm) a Security PIN. Thereafter, you will need that PIN to view and reconfigure the security features.</td>
</tr>
<tr>
<td>9</td>
<td>Diagnostics</td>
<td>Click this button to set the diagnostic features of the internal modem.</td>
</tr>
</tbody>
</table>
In order for the product to send scanned documents, you must provide e-mail addresses. The product addressing feature simplifies this process by searching for destination e-mail addresses.

Use the Addressing screen to set features that allow the product to get e-mail addresses directly from the database of a Lightweight Directory Access Protocol (LDAP) server instead of from a replicated LDAP Address Book. Using the LDAP Address Book directly guarantees that the latest addresses are used. The following illustration and table describe how to use this screen.

---

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>

<tr>
<td>3</td>
<td>Allow Device to directly access an LDAP Address Book</td>
<td>Select this check box to provide the product direct access to an LDAP Address Book.</td>
</tr>
</tbody>
</table>
### LDAP Server Bind Method

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anonymous</td>
<td>Select this option to connect to the LDAP server if the LDAP server does not require user credentials to access the LDAP database.</td>
</tr>
<tr>
<td>Simple</td>
<td>Select this option to connect to the LDAP server if the LDAP server requires user credentials to use the LDAP database. When this option is selected, you must enter the user, password, and domain. Note that the password will be sent across the network un-encrypted.</td>
</tr>
<tr>
<td>NTLM</td>
<td>Select this option to connect to the LDAP server if the LDAP server requires user credentials to use the LDAP database. This option supports NT Challenge Response. When this option is selected, you must enter the user, password, and domain. Note: This option is not available for all products.</td>
</tr>
</tbody>
</table>

### Credentials

Specify these settings if Simple or NTLM is selected from the LDAP Server Bind Method list.

### LDAP Server

Type the host name or IP address of the LDAP server whose database contains the centralized address book.

**Note:** Some products only recognize IP addresses. In such cases, host names are converted to the equivalent IP address.

### Port

Type the TCP/IP port number on which the server is processing LDAP requests. This is typically port 389.

### Find Server

Click this button to search for available LDAP servers.

### Find Settings

Click this button to have the product attempt to determine the best settings for the specified server when searching the LDAP database.

### Search Root

Type the Distinguished Name (DN) of the entry in the LDAP directory structure where address searching is to begin. A DN is made up of “attribute=value” pairs, separated by commas. For example:

```
ou=departmentname,o=companyname,c=country
ou=marketing,o=Hewlett Packard,c=US
o=hp.com
ou=engineering,cn=users,dc=hp,dc=com
```

**Note:** For some LDAP servers, the search root can be left blank (in which case its root node will be assumed).

### Device user information retrieval method

- **Exchange 5.5 Defaults**
  Select this option if you are connecting to a Microsoft Exchange 5.5 server that is running LDAP. The LDAP attribute values are automatically set.

- **Active Directory Defaults**
  Select this option if you are connecting to a Microsoft Exchange Server 2000 server that is running LDAP. The LDAP attribute values are automatically set.

- **Custom**
  Select this option if you need to manually configure the LDAP attribute values.
Advanced Addressing Settings

The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
</table>
| 12      | Match the name entered with the LDAP attribute of | Type the attribute in the LDAP database that identifies a person in the address book. The value of this attribute will be compared to the name that the user types in order to retrieve the person's e-mail address. The following are a few possible LDAP attributes:  
  - uid: User Identifier  
  - cn: Common Name  
  - sn: Surname (Last Name)  
  - givenName: First Name |
| 13      | Retrieval the device user's e-mail address using attribute of | Type the LDAP attribute that contains the person's e-mail address. The following are two of the possible LDAP attributes:  
  - rfc822Mailbox  
  - mail |
| 14      | Advanced | Click this button to open a new screen where you can set advanced LDAP server features. For more information, see “Advanced Addressing Settings” on page 50. |
| 15      | Test | Click this button to test the settings that you specified. |

**Advanced Search Options**

Maximum LDAP Addresses:

- 20 Addresses

Maximum Search Time:

- 10 Seconds

LDAP Filter Condition:

- Entities in Database are Alphabetized

Find entries in the Database:

- that begin with the search string (fast mode).
- that contain the search string (verbose mode).

---

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>

<td>EWS tabs and menus</td>
<td>For more information, see “Navigating through the HP Embedded Web Server” on page 5.</td>
</tr>
<tr>
<td>2</td>
<td>Help</td>
<td>Click to open a help file that contains information about the screens on the Digital Sending tab.</td>
</tr>
<tr>
<td>3</td>
<td>Advanced Search Options</td>
<td>Select the advanced LDAP server search settings.</td>
</tr>
<tr>
<td>4</td>
<td>Find entries in the Database</td>
<td>Select whether the LDAP search queries include entries that begin with the partial name or all entries that contain the partial name anywhere within the entry’s name.</td>
</tr>
</tbody>
</table>
Use the Address Book screen to add a predefined list of e-mail addresses, in the form of a Comma-Separated Value (.CSV) file, to be imported into the product internal address book. The .CSV file is a plain-text file (in UTF-8 encoding) that contains each e-mail address entry on a separate line. An entry consists of an alias, which is the name that appears, followed by a comma and an e-mail address. The aliases and e-mail addresses cannot contain any commas. The following are examples.

name1, name1@your.company.com
name2, name2@your.company.com

At the product, use the alias name to search for e-mail addresses.

The following illustration and table describe how to use this screen.

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>
<td>For more information, see “Navigating through the HP Embedded Web Server” on page 5.</td>
</tr>
<tr>
<td>2</td>
<td>Address Book File Name</td>
<td>Use this field for the path of the .CSV address book file.</td>
</tr>
<tr>
<td>3</td>
<td>Button used to browse for a file</td>
<td>Click this button to find the .CSV address book file.</td>
</tr>
<tr>
<td>4</td>
<td>Import</td>
<td>After the path of the .CSV file appears in the Address Book File Name field, click this button to import the address book into the product internal address book.</td>
</tr>
<tr>
<td>5</td>
<td>Clear Device Address Book</td>
<td>Click this button to clear the contents of the product's internal address book.</td>
</tr>
</tbody>
</table>
Activity Log

Use the Activity Log screen to view digital sending job information, including any errors that occur. The following illustration and table describe how to use this screen.

### Callout Area on the screen

**Information or capability that the area provides**

<table>
<thead>
<tr>
<th>Callout</th>
<th>Area on the screen</th>
<th>Information or capability that the area provides</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>EWS tabs and menus</td>
<td>For more information, see &quot;Navigating through the HP Embedded Web Server&quot; on page 5.</td>
</tr>
<tr>
<td>2</td>
<td>Help</td>
<td>Click to open a help file that contains information about the screens on the Digital Sending tab.</td>
</tr>
<tr>
<td>3</td>
<td>Severity</td>
<td>Lists the severity of the error, if applicable, for each log entry.</td>
</tr>
<tr>
<td>4</td>
<td>Device</td>
<td>Lists the IP address of the product.</td>
</tr>
<tr>
<td>5</td>
<td>User</td>
<td>Lists the user that initiated the event.</td>
</tr>
<tr>
<td>6</td>
<td>Event</td>
<td>Describes if the event was successful or if an error occurred.</td>
</tr>
<tr>
<td>7</td>
<td>Time</td>
<td>Shows the time for each log entry.</td>
</tr>
<tr>
<td>8</td>
<td>Save</td>
<td>Click this button to save the log information to a file.</td>
</tr>
<tr>
<td>9</td>
<td>Details</td>
<td>Select the log entry and then click the Details button to view the log entry details.</td>
</tr>
<tr>
<td>10</td>
<td>Refresh</td>
<td>Click this button to update the view to include the latest log information.</td>
</tr>
<tr>
<td>11</td>
<td>Clear</td>
<td>Click this button to clear the information from the log.</td>
</tr>
</tbody>
</table>

**Note**

This only clears the log that appears onscreen. The log entries remain on the product for job-accounting purposes.
Use the Preferences screen to configure general settings for the digital-sending features. The following illustration and table describe how to use this screen.

### Preferences Settings

#### Default Scanner Settings

<table>
<thead>
<tr>
<th>Document Size</th>
<th>Document Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Letter</td>
<td>Mixed</td>
</tr>
</tbody>
</table>

#### Time-outs

After a Digital Sending operation is complete,
- Immediately reset the device to the default settings.
- Delay before resetting the device to the default settings.

Number of Seconds (10-300) to delay: [20]

### Callout

<table>
<thead>
<tr>
<th>Callout</th>

<td>Help</td>
<td>Click to open a help file that contains information about the screens on the Digital Sending tab.</td>
</tr>
<tr>
<td>3</td>
<td>Document Size</td>
<td>Select the default media size that you want the product scanner to use when scanning a document.</td>
</tr>
<tr>
<td>4</td>
<td>Document type</td>
<td>Select the default media type that you want the product image processor to use when scanning a document.</td>
</tr>
<tr>
<td>5</td>
<td>2 Sided Document</td>
<td>Select this check box to have the product scan both sides of a document.</td>
</tr>
<tr>
<td>6</td>
<td>Auto Settings Reset</td>
<td>Use the Time-outs options to reset all digital sending settings that are associated with a job to the product default settings. You can have the settings reset immediately after a digital-send operation in which the settings have been changed by a user, or to delay the reset for any interval from 10 to 300 seconds.</td>
</tr>
</tbody>
</table>
Overview

Use the Networking screens to configure and manage your product on your network. The appearance and features of the Networking screens differ depending on the model and version of your HP Jetdirect print server. The following screen is similar to what you might see when you click Networking. From the left navigational bar, click the Networking menu for the screen that you want to view.

Note: See the table on the following page for descriptions of the callouts in this illustration.
Depending on your HP Jetdirect print server model and operating version, the following are some tasks that you can perform from the Networking screens:

- Change network configuration settings for various types of network connections.
- Turn on or turn off printing protocols.
- Set up a support contact and support URLs.
- Set a password to control access to the printer and network configuration settings.
- Configure the security of your product through the use of passwords, access lists, and management protocols.
- View general network status information, including network statistics that are stored on the print server, for network troubleshooting or optimization.
- View protocol information for all supported network connections.
- Open the HP Jetdirect Configuration page.
- Set the frequency at which the HP Embedded Web Server checks the network status.

For more information about the Networking screens, see the following sources:

- **Help.** On each Networking screen, a Help link under Other Links provides a description of the networking features and helpful tips for using them. Also, from the Help screen you can gain access to additional help from the HP Web site.
- **HP Jetdirect Print Server Administrator’s Guide.** This guide is normally available on the software CD that came with your product. To download the most recent version of the guide for your print server model, go to: [http://www.hp.com/support/net_printing](http://www.hp.com/support/net_printing).
Using the Other Links as a resource

The Other Links box contains three permanent links that provide quick access to product-specific information, such as interactive troubleshooting and ordering information for genuine HP supplies.

You can use the Edit Other Links screen on the Settings tab to add up to five customized links to the Web sites of your choice. (With a permanent storage device installed, you can add up to five additional links; without the extra storage, you can add one additional link.) These links appear throughout the EWS screens, in the Other Links box beneath the left navigational bar. For more information, see “Edit Other Links” on page 32.
Using the Other Links as a resource

hp instant support

Hewlett-Packard Company offers hp instant support, an Internet-based support system that collects diagnostic information from your product and matches it with the HP information database. At hp instant support, you can find intelligent solutions that help you resolve problems quickly and easily.

How hp instant support works

Information is gathered from your product and securely transmitted to Hewlett-Packard Company when you click **hp instant support**. The hp instant support Web site reads the product data to analyze the product’s current status. The Web site creates a customized Web page that appears in the browser window and contains easy-to-follow text and visual aids. The hp instant support Web site also directs you to additional services that are available for your product.

Before any of the product data is sent to Hewlett-Packard for analysis, you can view all of the information (for example, the serial number, error conditions, and product status) that will be forwarded. Hewlett-Packard treats this information as confidential.

Information you can get from hp instant support

The hp instant support Web site provides these tools for troubleshooting and for maintenance:

- Firmware and software updates.
- Troubleshooting for recent events that are listed on the Event Log. For example, the product might show a jam as the most recent event listed in the event Log. The hp instant support Web site detects the event and provides troubleshooting information for the jam.
- Support packs.
- Product documentation, such as user guides and getting started guides.

Order Supplies

The **Order Supplies** link connects you to a Web page that facilitates your online ordering of supplies from a reseller of your choice. The supplies that you need are preselected. You can change quantities or select additional items. Your items are added to the shopping cart, ready for checkout, ensuring that the correct supplies are ordered through your selected reseller.
Product Support

The **Product Support** link connects you to a Web page that brings together a comprehensive menu of support resources that business people need. From this Web page, you can accomplish these tasks and more:

- Find a list of HP products at one site: computers, workstations, servers, storage devices, printer, scanners, digital imaging, and mobile devices.
- Obtain technical support. Solve a problem; find information to set up, install, and configure your product; discover and use a product; maintain your product; upgrade and migrate your product software and driver; and recycle products or dispose of them correctly.
- Gain access to self-solve resources such as FAQs, user documentation, features and specifications, and product-compatibility information.
- Collaborate with HP and with your peers through discussion groups, e-mail support, and phone support.
- Use task-based navigation to identify the task area that you want to work on and quickly discover related topics and tools.

In addition, you can find these features: hot topics, a subscription center, product rebate offers and other announcements, and training and education opportunities.

**My Service Provider and My Service Contract**

The **My Service Provider** and the **My Service Contract** links appear only if they have been created (and perhaps renamed) by the service provider in the Other Links screen on the **Settings** tab. The link can then be clicked by any user to get information about the service provider and the service contract. The information, which can be up to 50 characters long, is stored in the permanent storage of the product.

When these links have been created, the appearance of the **Other Links** box changes to include the new links, as shown in the following illustration.
