1 Using a USB device

Universal Serial Bus (USB) is a hardware interface that connects an optional external device, such as a USB keyboard, mouse, drive, printer, scanner, or hub, to the computer or to an optional expansion product.

Depending on the model, the computer may have up to 4 USB ports, which support USB 1.0, USB 1.1, and USB 2.0 devices. To add more USB ports, attach an optional hub or expansion product.

Connecting a USB device

 **CAUTION** To prevent damage to a USB connector, use minimal force to connect a USB device.

To connect a USB device to the computer, connect the USB cable for the device to the USB port. You will hear a sound when the device has been detected.

 **NOTE** The first time you connect a USB device, the “Installing device driver software” message is displayed in the notification area, at the far right of the taskbar.

Stopping a USB device

 **CAUTION** To prevent loss of information or an unresponsive system, stop the USB device before removing it.

CAUTION To prevent damage to a USB connector, do not pull on the cable to disconnect the USB device.

To stop a USB device:

3. Click **Stop**, and then click **OK**.

Required USB software

Some USB devices may require additional support software, which is usually included with the device. For more information about device-specific software, refer to the device manufacturer's instructions.

2 Using a 1394 device (select models only)

IEEE 1394 is a hardware interface that can be used to connect a high-speed multimedia or data storage device to the computer. Scanners, digital cameras, and digital camcorders often require a 1394 connection.

Some 1394 devices may require additional support software, which is usually included with the device. For more information about device-specific software, refer to the user guide for the device.

The 1394 port, illustrated below, also supports IEEE 1394a devices.
