# Proof a press with CMYK

*Printer:* HP Designjet 30/90/130 series
*Software*: EFI Designer Edition for HP
*Operating System:* Windows

**hp** invent

1. First recommendations:

   - See the [Media type functionality & features](#) and choose the most appropriate media.

   - It is essential to have the media type correctly calibrated with the printer and print mode, consult the [Calibrate my printer](#) document.

2. Open the EFI Designer Edition RIP.

3. EFI Designer Edition RIP settings, **Preferences**:

   - **Color**:

     o Check that the **Color Management** is active.

     o **Paper name:** Select the paper type that is loaded on the printer (always calibrated) and "Best" print quality.

     o **Print resolution**: 600 x 600.

     o **Color output mode**: Proof.

     o **RGB**: select the source profile of your file if it is RGB or have any RGB image, press **Add profile** button to add it. If you don't have it, select one of the list and Perceptual.

     o **CMYK**: Select the press profile you want to emulate and Relative Colorimetric intent (select Absolute Colorimetric if you want to emulate the white of the paper). Press **Add profile** button to add the profile on the list if it is not there.

     o Check **Use embedded profiles**.

- **Layout:**
    - o **Orientation:** Select the orientation of your image on the paper.
    - o Set the **Alignment** and the **Scaling** setting you need.
- **Printer:**
    - o **Paper size:** Select the paper size of the media loaded on the printer.
- Click **OK.**
4. **Add** button, browse your file and click **Open** or drag and drop the file to the spool panel.
5. Check the print layout before printing, select the file and press the **Preview** button, if it is ready click **Print**. If you need to retouch any setting, you can do it in the **Individual Job Settings** (View menu > Job Info).
