

Proof a press with Pantone Colors

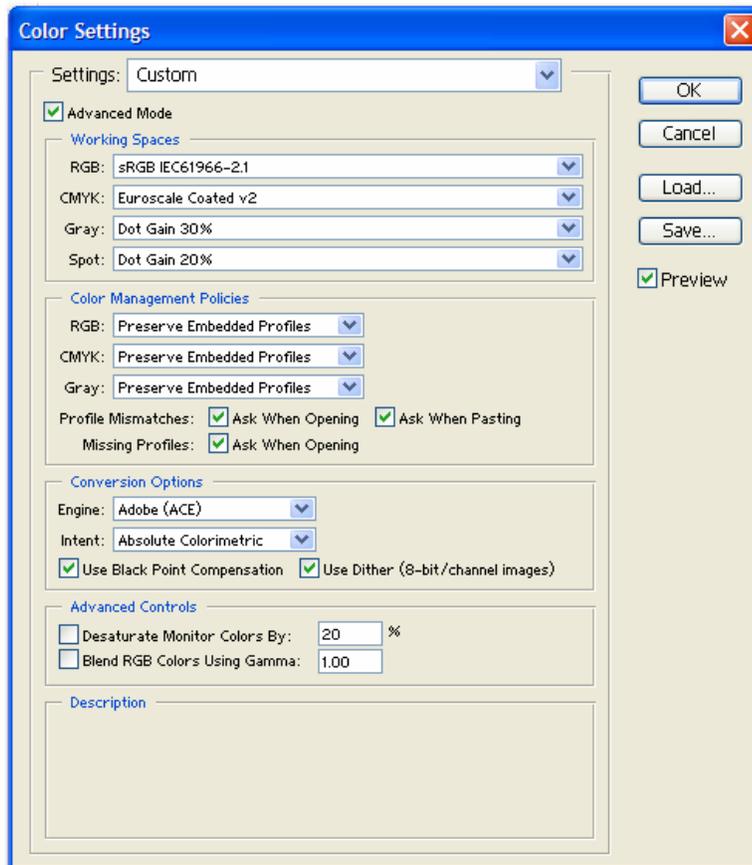

Application: Adobe Photoshop CS

Printer: HP Designjet 30/130 series

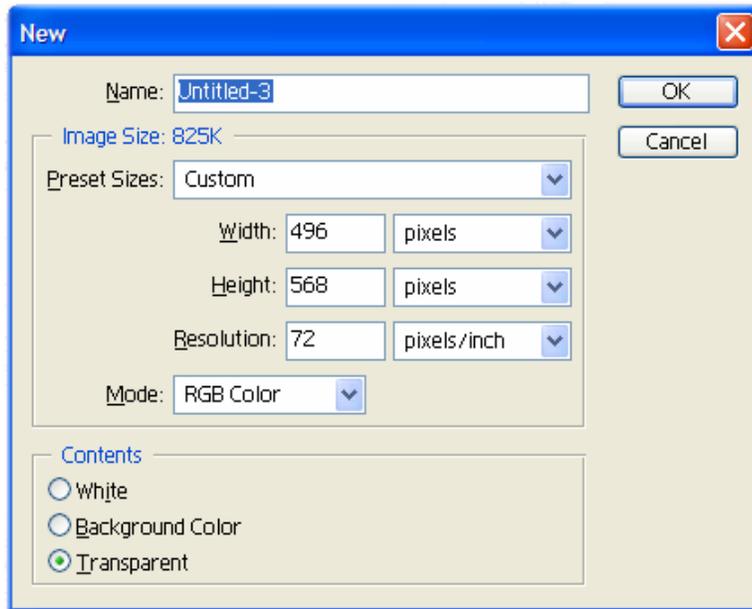

Software: HP Software RIP

Operating System: Windows

1. First recommendations:
 - Some paper types are better than others for proofing, see the [Media type functionality & features](#) and choose the most appropriate media.
 - It is essential to have the media type correctly calibrated with the printer and print mode, consult the [Calibrate my printer](#) document.
2. Open Adobe Photoshop CS.
3. Configure the **Color Settings, Edit menu > Color Settings...**:
 - Make sure that the **Advance Mode** check box is ticked.
 - **Working Space > RGB**: sRGB IEC61966-2.1.
 - **Conversion Options > Intent**: Absolute Colorimetric.

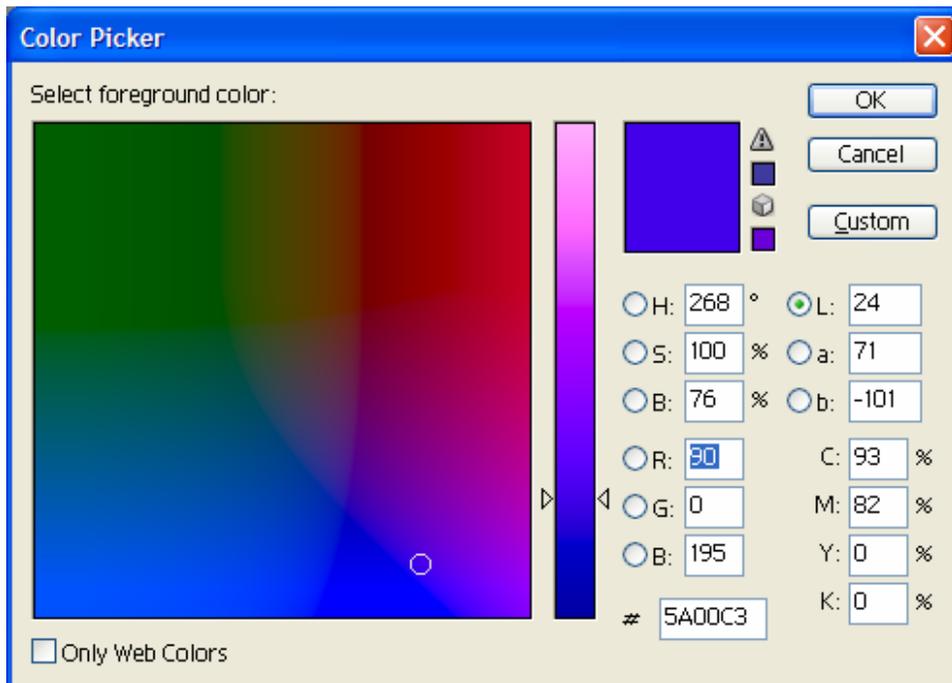

4. Create a new file in an RGB color mode, **File menu -> New...**:
 - **Width, Height and Resolution**: select the image size and resolution you need.
 - **Mode**: RGB Color

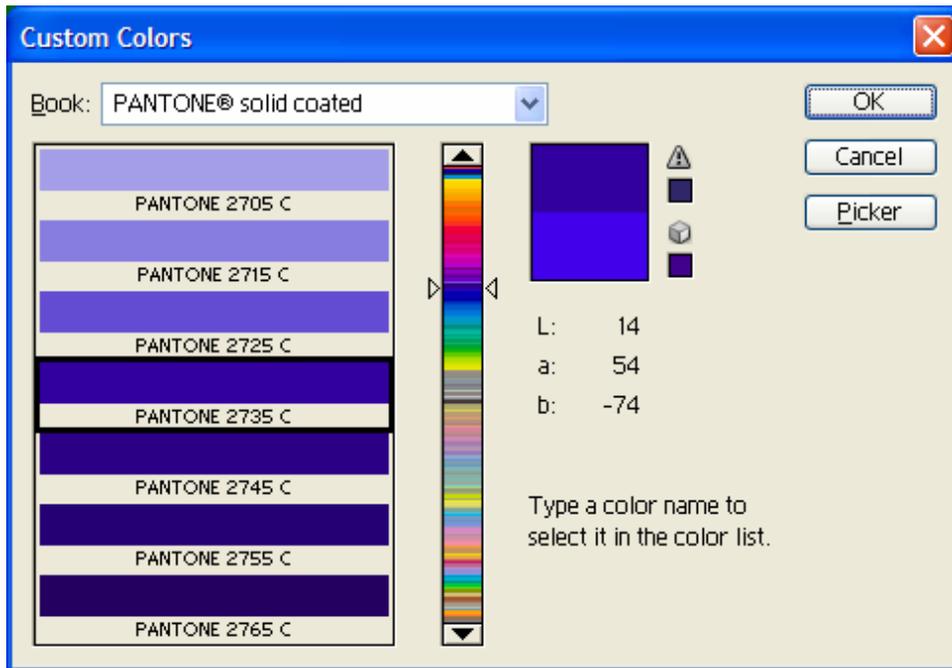

5. Select your Pantone Color and draw/paint your image:

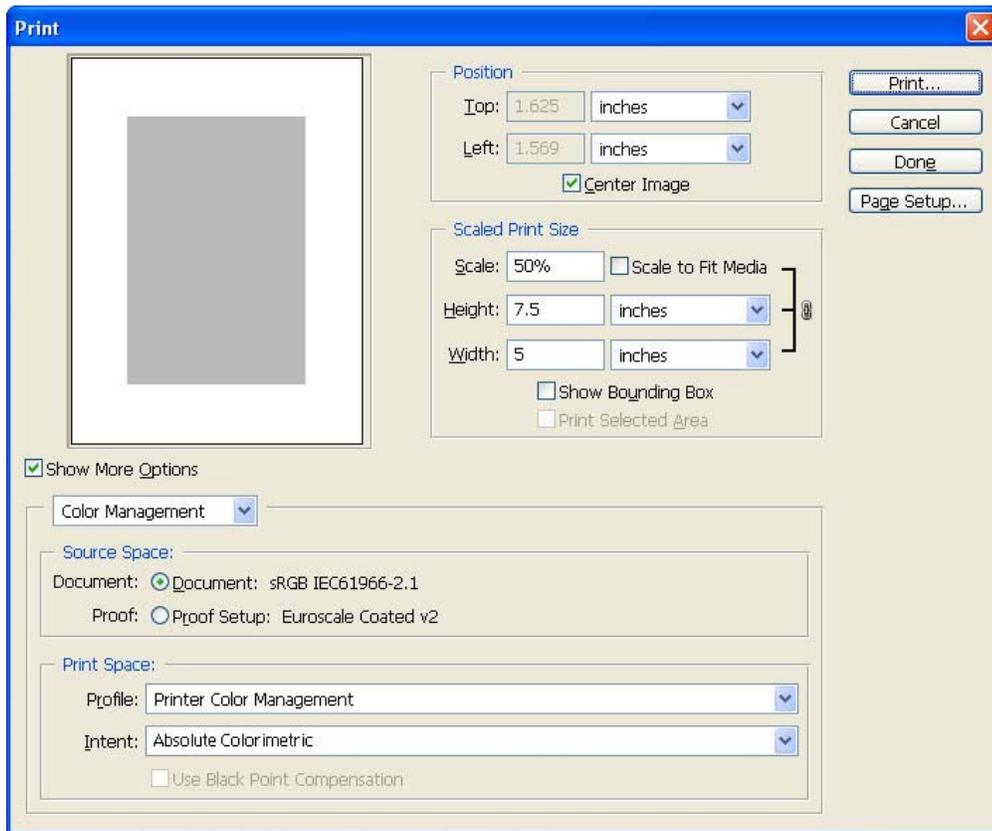

- Double-click on the **color box** of the **Tools** window to open the **Color Picker**:

- Select **Custom** and open the **Pantone Solid Coated** book, now you can select the desired Pantone color.

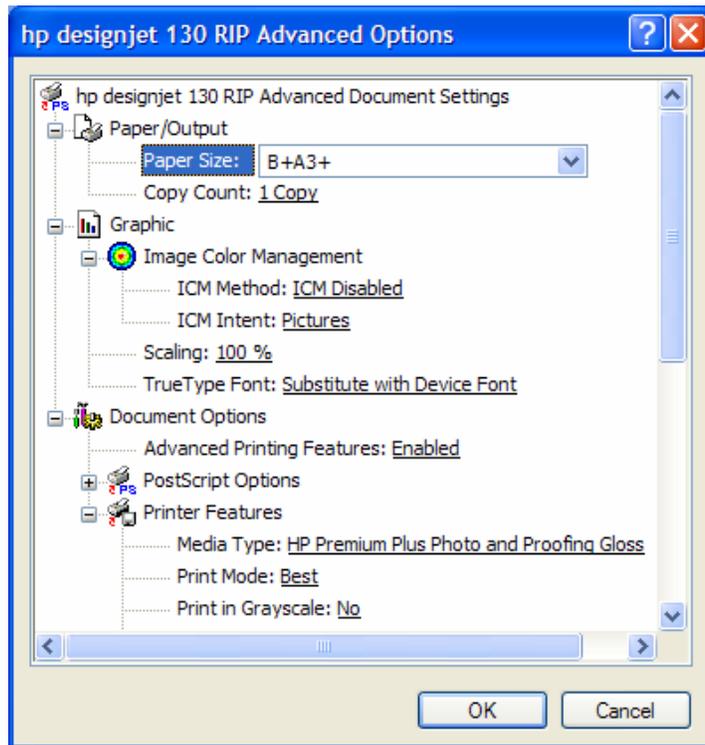

- Click **OK**. Now you can paint/draw.
6. Adobe Photoshop **Print with Preview...** settings, **File menu > Print with Preview...**:
- **Page Setup:**
 - **Printer...**: Select the printer (ex. HP designjet 130 RIP).
 - Click **OK**.
 - **Paper Size**: Select the paper size of the media loaded on the printer.
 - **Orientation**: Select how to orient you image on the paper.
 - Click **OK**.
 - Set the **Position** and the **Scaled Print Size** you need.
 - Check **Show More Options**.
 - Select the **Color Management** tab:
 - **Source Space**: Document.
 - **Print Space > Profile**: Printer Color Management.
 - **Print Space > Intent**: Absolute Colorimetric.

7. RIP settings, **Print... > Properties > Advanced...**:

• **Document Options > Printer Features:**

- Select the **Media Type** that is loaded on the printer (always calibrated)
- **Print Mode:** Best (always calibrated).
- You don't need to worry about the RIP color settings (Perform Color Correction, CMYK and RGB Input Profiles and Color rendering intent) because you have selected **Printer Color Management** option in the application, then, the application tells the RIP which source profile and rendering intent should be used for the conversion to the print space, these are the Document profile and the Print Space Intent of the application. The RIP color settings will be overridden.

- Click **OK**, until print.
