Abstract

This document provides HP ProLiant Essentials Rapid Deployment Pack—Windows Edition hardware and operating system support information.

Related Documents

HP recommends reviewing the HP ProLiant Essentials Rapid Deployment Pack Planning Guide before reading this guide.

HP recommends reviewing the following documentation after reading this guide:

All of the documents can be found in .pdf format at http://www.hp.com/servers/rdp, from the Rapid Deployment Pack CD autorun utility, at \docs on the product CD, and at \docs on the Deployment Server.

Where to Go for Additional Help

Refer to the following sources for additional information about the Rapid Deployment Pack.

Online Resources

- Altiris website at http://www.altiris.com
Telephone Numbers

For the name of your nearest HP authorized reseller:

• In the United States, call 1-800-345-1518.
• In Canada, call 1-800-263-5868.

For HP technical support:

• In North America:
  — Call 1-800-HP-INVENT (1-800-474-6836). This service is available 24 hours a day, 7 days a week. For continuous quality improvement, calls may be recorded or monitored.
  — If you have purchased a Care Pack (service upgrade), call 1-800-633-3600. For more information about Care Packs, refer to the HP website http://www.hp.com/

• Outside North America, call the nearest HP Technical Support Phone Center. For telephone numbers for worldwide Technical Support Centers, refer to the HP website http://www.hp.com/
Supported Deployment Infrastructure

The Deployment Server can be installed on the following operating systems:

**NOTE:** The operating systems that can be deployed on a target server are listed in the section “Supported Operating Systems”.

- Microsoft® Windows® 2000 Server
- Microsoft Windows 2000 Advanced Server
- Microsoft Windows Server 2003, Enterprise Edition

The NFS server can be installed on Red Hat Linux or SUSE LINUX.

For more details about requirements, refer to Chapter 2 of the *HP ProLiant Essentials Rapid Deployment Pack—Windows Edition Installation Guide*. 
## Supported Target Platforms

The Rapid Deployment Pack supports deployment to the target platforms listed in Table 1.

**Table 1: Supported Target Platforms**

</tbody>
</table>

1. After certain deployment operations, the MAC address of the server might be set to 0. To resolve this issue, apply SoftPaq SP26187. Refer to Table 2 when applying this update to any ProLiant server with the NC7770 stand-up NIC.

2. Disk drive size must be smaller than 137 GB to successfully complete image capture and deploy with ATA RAID.

3. RAID set through the ROM-Based Setup Utility (RBSU) is not supported.

4. Might stop responding when loading the Q57.DOS network driver. To resolve this issue, apply SoftPaq SP26187.
Supported Deployment Mechanisms

The Altiris Deployment Solution has several mechanisms for deploying target servers. All methods use the Altiris Deployment Agent for DOS. Table 5 displays a matrix of supported target servers and the supported deployment mechanisms available for each server.

Preboot eXecution Environment

Target servers can connect to the Deployment Server by performing a Preboot eXecution Environment (PXE) boot and receiving a boot image over the network. The boot image is analogous to a boot diskette. PXE provides the most automated, hands-free bootstrap method for server deployment.

All newer ProLiant servers ship with PXE-enabled embedded NICs or PXE-enabled stand-up NICs. Some older servers that do not have PXE support can obtain it with a PXE-enabled stand-up NIC. Refer to Table 2 for a list of stand-up NICs with PXE support.

Table 2: Stand-Up NICs with PXE Support

<table>

</tr>
<tr>
<td>NC7771</td>
<td>6.2.11</td>
</tr>
</tbody>
</table>

1. You must flash NC3123/Rev. 1 to enable PXE support. The IBAUTIL.EXE utility that updates the PXE firmware is available in SP23495.exe.

2. Only NC7770/Rev. E or later is flash upgradeable. You must move the EPROM WRITE jumper on the board to enable. Firmware update is available in SP24987.exe.

3. For Wake-on-LAN (WOL) support with stand–up NICs, WOL must be enabled on the NIC by the driver and ROM-Based Setup Utility (RBSU).

Some servers require a firmware upgrade to use PXE in the Rapid Deployment Pack. Refer to Table 5 for details on required upgrades.

The boot images used by the Altiris PXE Server are DOS-based. By default, these images use the Universal Network Driver Interface (UNDI) driver for network connectivity. The UNDI driver functions with any PXE-enabled NIC.

It is possible to re-create the boot images so that they use an NDIS2 driver. However, these images only function with servers in your environment that have NICs supported by that NDIS2 driver.

IMPORTANT: HP strongly recommends that you use the default UNDI driver in your PXE boot images.
The default location of PXE or Network boot in the boot order varies based on the server and the options installed. For the servers listed in Table 3, PXE or Network boot must be placed first in the boot order to support the server.

**Table 3: Servers Requiring PXE or Network Boot Be First in Boot Order**

</table>

(1) Mandatory upgrade for PXE support.
(2) Required to support Windows 2003 scripted install jobs. Recommended for various bug fixes and enhancements to the PXE firmware (version 3.1.15).
(3) Recommended upgrade. Refer to Customer Advisory EB030321_CW1.
(4) Required for server MAC address issue referenced in Table 1.
(5) Required to support deployment on systems with no diskette drive.
Bootworks Diskette, RILOE, and iLO with Virtual Floppy

As an alternative to PXE, target servers can connect to the Deployment Server by creating a physical Bootworks diskette with networking support that, when booted, automatically connects to the Altiris Deployment Server. This diskette can be used in the physical diskette drive, or an image of it can be booted through the Virtual Floppy feature of Remote Insight Lights-Out Edition (RILOE) or Integrated Lights-Out (iLO). However, the Virtual Floppy feature of RILOE and iLO is not an integrated feature of the Rapid Deployment Pack.

The boot diskette must use an NDIS2 driver for network connectivity. For this reason, drivers for each type of NIC in your environment are required (for example, Intel® or Broadcom).

**NOTE:** For details on creating a Bootworks diskette, refer to Chapter 4 of the *HP ProLiant Essentials Rapid Deployment Pack—Windows Edition Installation Guide*.

**NOTE:** A physical boot diskette can only be used with the headless ProLiant BL e-Class servers with the bootable USB diskette drive attached to the diagnostic adapter. A physical boot diskette can only be used with the headless ProLiant BL p-Class servers using the Virtual Floppy feature of iLO.

Bootworks Partition

Similar to the Bootworks diskette mechanism, a hidden or embedded partition can be created on the hard drive of the server. When the partition is made active and booted, it automatically connects to the Deployment Server.

**NOTE:** The Bootworks Partition deployment mechanism is not recommended for initial deployment or scripted install redeployments.

Supported Storage Area Network Connectivity

Storage Area Network (SAN) driver support for deploying servers that connect to a SAN and servers that boot from a SAN are provided for the following operating systems:

- Windows 2000 Server
- Windows Server 2003
- Red Hat Enterprise Linux 2.1 Update 6 for x86 (support is only for servers that connect to a SAN)
- Red Hat Enterprise Linux 3 Update 4 for x86
- SUSE LINUX Enterprise Linux 9 Service Pack 1 for x86

SAN driver support is specifically for the following servers:

Table 6: ProLiant Servers Supporting SAN Drivers

<tr>
<td>ProLiant BL25p</td>
<td>ProLiant BL35p NEW</td>
</tr>
</tbody>
</table>

\* SAN connectivity is not supported for Windows 2000 Server and Windows Server 2003 operating systems.

Manual procedures are required to create the SAN storage and to set up the server hardware to boot from the SAN. For more information, refer to the Rapid Deployment Pack Knowledge Base at [http://www.hp.com/servers/rdp/kb](http://www.hp.com/servers/rdp/kb) (Articles 105 and 127).
Supported Operating Systems

The Rapid Deployment Pack jobs in the Altiris Deployment Server Console enable the installation of supported operating systems, using either scripting or imaging, on supported platforms using the supported deployment mechanisms. The following tables display the supported platforms for each supported operating system. The specific platform might support additional operating systems that cannot be installed with the Rapid Deployment Pack.

Microsoft Windows NT 4.0

Microsoft Windows NT® 4.0 with Service Pack 2 or greater can be deployed using only image install to the platforms listed in Table 7. Scripted install is not supported.

Table 7: Platforms Supporting Microsoft Windows NT 4.0 Deployment

¹ Only image install is supported.

² Windows 2000 Service Pack 4 slipstream is required.
Microsoft Windows Server 2003

**IMPORTANT:** If you plan to perform scripted installations with PXE, refer to Table 4 for important firmware prerequisites. HP strongly recommends that you use the default UNDI driver in your PXE boot images (instead of the NDIS2 driver).
