Adding or replacing memory modules

The computer has two memory module compartments. The primary memory module compartment and the expansion memory module compartment are located on the bottom of the computer under the hard drive cover.

The memory capacity of the computer can be upgraded by adding a memory module to the empty expansion memory module slot or by upgrading the existing memory module in the primary memory module slot.

⚠️ **WARNING!** To reduce the risk of electric shock and damage to the equipment, unplug the power cord and remove all batteries before installing a memory module.

⚠️ **CAUTION:** Electrostatic discharge (ESD) can damage electronic components. Before beginning any procedure, touch a grounded metal object to be sure that you are discharged of static electricity.
Adding or replacing a memory module in the expansion memory module slot

To add or replace a memory module in the expansion memory module slot, follow these steps:

1. Save your work.
2. Shut down the computer and close the display.
   If you are not sure whether the computer is off or in Hibernation, turn the computer on by pressing the power button. Then shut down the computer through the operating system.
3. Disconnect all external devices connected to the computer.
4. Unplug the power cord from the AC outlet.
5. Turn the computer upside down on a flat surface.
6. Remove all batteries from the computer.
7. Loosen the hard drive cover screws (1).
8. Lift the hard drive cover (2) away from the computer.
9. Remove the memory module from the expansion memory module slot:
   a. Pull away the retention clips (1) on each side of the memory module.
      The memory module tilts up.

\[\text{CAUTION:}\] To prevent damage to the memory module, hold the memory module by the edges only. Do not touch the components on the memory module.
b. Grasp the edge of the memory module (2), and gently pull the module out of the memory module slot.

To protect a memory module after removal, place it in an electrostatic-safe container.

10. Insert a memory module into the expansion memory module slot:
   a. Align the notched edge (1) of the memory module with the tab in the memory module slot.

   △ **CAUTION:** To prevent damage to the memory module, hold the memory module by the edges only. Do not touch the components on the memory module and do not bend the memory module.

   b. With the memory module at a 45-degree angle from the surface of the memory module compartment, press the module (2) into the memory module slot until it is seated.

   c. Gently press the memory module (3) down, applying pressure to both the left and right edges of the memory module, until the retention clips snap into place.

11. Align the tabs (1) on the hard drive cover with the notches on the computer.

12. Close the cover (2).
13. Tighten the hard drive cover screws (3).

14. Reinstall the batteries.

15. Reconnect external power and external devices.

16. Turn on the computer.
Upgrading or replacing a memory module in the primary memory module slot

To upgrade a memory module in the primary memory module slot, follow these steps:

1. Save your work.
2. Shut down the computer.
   If you are not sure whether the computer is off or in Hibernation, turn the computer on by pressing the power button. Then shut down the computer through the operating system.
3. Disconnect all external devices connected to the computer.
4. Unplug the power cord from the AC outlet.
5. Turn the computer upside down on a flat surface.
6. Remove all batteries from the computer.
7. Loosen the hard drive cover screws (1).
8. Lift the hard drive cover (2) away from the computer.

\[\text{NOTE:} \] If the expansion memory module slot is empty, omit step 9.

9. Remove the memory module from the expansion memory module slot:
   a. Pull away the retention clips (1) on each side of the expansion memory module.
      The memory module tilts up.

\[\text{CAUTION:} \] To prevent damage to the memory module, hold the memory module by the edges only. Do not touch the components on the memory module.
b. Grasp the edge of the memory module (2), and gently pull the module out of the memory module slot.

To protect a memory module after removal, place it in an electrostatic-safe container.

10. Remove the memory module from the primary memory module slot:

a. Pull away the retention clips (1) on each side of the memory module.

The memory module tilts up.

⚠️ CAUTION: To prevent damage to the memory module, hold the memory module by the edges only. Do not touch the components on the memory module.

b. Grasp the edge of the memory module (2), and gently pull the module out of the memory module slot.

To protect a memory module after removal, place it in an electrostatic-safe container.
11. Insert the memory module into the primary memory module slot:
   a. Align the notched edge (1) of the memory module with the tab in the memory module slot.
   △ **CAUTION:** To prevent damage to the memory module, hold the memory module by the edges only. Do not touch the components on the memory module and do not bend the memory module.
   b. With the memory module at a 45-degree angle from the surface of the memory module compartment, press the module (2) into the memory module slot until it is seated.
   c. Gently press the memory module (3) down, applying pressure to both the left and right edges of the memory module, until the retention clips snap into place.

12. Insert the memory module into the expansion memory module slot:
   a. Align the notched edge (1) of the memory module with the tab in the memory module slot.
   △ **CAUTION:** To prevent damage to the memory module, hold the memory module by the edges only. Do not touch the components on the memory module and do not bend the memory module.
   b. With the memory module at a 45-degree angle from the surface of the memory module compartment, press the module (2) into the memory module slot until it is seated.
c. Gently press the memory module (3) down, applying pressure to both the left and right edges of the memory module, until the retention clips snap into place.

13. Align the tabs (1) on the hard drive cover with the notches on the computer.
14. Close the cover (2).
15. Tighten the hard drive cover screws (3).

16. Reinstall the batteries.
17. Reconnect external power and external devices.
18. Turn on the computer.
