Installing the 1394a PCIe x1 Card

1. Turn off power to the system and disconnect the power cord from the power outlet.

WARNING! To avoid the risk of serious injury, ensure that the power cord is unplugged from the electrical outlet at the wall before installing the PCIe x1 card. Failure to do so may expose you to the risk of electric shock.

CAUTION: To avoid the risk of damage to the system, ensure that the power cord is unplugged from the electrical outlet at the wall before installing the PCIe x1 card.

NOTE: Refer to the documentation included with your computer for detailed information on installing an expansion card.

2. Remove the computer cover or access panel.

3. Remove the appropriate expansion slot cover from the rear of the computer.

4. A full-height expansion cover bracket is attached to the 1394a PCIe card. If your computer requires a half-height bracket, remove two screws that secure the full-height bracket to the card, remove the bracket from the card, place the low-profile bracket on the card, and secure the bracket with the two screws.

5. Insert the 1394a PCIe x1 card into an available PCIe expansion slot in the computer.

NOTE: The 1394a PCIe x1 card has a PCIe 2.0 5 GHz interface. For optimal performance, install this card in a PCIe 2.0 slot. Installing it in a PCIe 1.0 slot could cause the card to run at a reduced 2.5 GHz throughput. Refer to the documentation included with your computer for details on installing an expansion card.

6. Look for an available SATA Power connector inside the chassis. If one is available, do the following:

NOTE: The SATA power cable is only required for bus-powered devices that consume over 1 amp of power.

- Using the SATA power cable provided, plug the far end of the cable labeled P3 into the 1394a PCIe card. Plug the other end of the cable labeled P1 into the available SATA power cable.

- If there is no available SATA power connector inside the chassis, do the following:
  - Disconnect the SATA power cable from the rear of any available SATA drive, such as a hard drive or optical drive.
  - Using the SATA power cable provided in the kit, plug the far end of the cable labeled P3 into the 1394a PCIe card. Plug the middle connector on the cable labeled P2 into the rear of the drive that was disconnected in the previous step. Plug the other end of the cable labeled P1 into the SATA power cable that was disconnected from the drive.

7. Replace the computer cover or access panel.

8. Plug in and power on the computer.

9. After powering on the computer, make sure the card is being recognized by the system (a popup message will display in the system tray on the Windows taskbar).

10. Connect your 1394a device(s) to the 1394a port(s) on the 1394a PCIe card. Refer to the device manufacturer’s documentation for specific instructions on connecting a device.

Connecting an External 1394a Port

The 1394a PCIe card is equipped with a 1394a connector on the rear of the card that can be used to connect an external 1394a port. To connect to the external 1394a port, plug the cable from the external port into the connector on the rear of the card.
Federal Communications Commission Notice

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio or television technician for help.

Modifications

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Hewlett-Packard Company may void the user's authority to operate the equipment.

Cables

Connections to this device must be made with shielded cables with metallic RFI/EMI connector hoods in order to maintain compliance with FCC Rules and Regulations.

European Union Regulatory Notice

Products bearing the CE marking comply with the following EU Directives:

- Low Voltage Directive 2006/95/EC
- EMC Directive 2004/108/EC
- Ecodesign Directive 2009/125/EC, where applicable

CE compliance of this product is valid if powered with the correct CE-marked AC adapter provided by HP.

Compliance with these directives implies conformity to applicable harmonized European standards (European Norms) that are listed in the EU Declaration of Conformity issued by HP for this product or product family and available in (in English only) either within the product documentation or at the following web site: www.hp.eu/certificates (type the product number in the search field).

The compliance is indicated by one of the following conformity markings placed on the product:

- For non-telecommunications products and for EU harmonized telecommunications products, such as Bluetooth® within power class below 10mW.
- For EU non-harmonized telecommunications products (if applicable, a 4-digit notified body number is inserted between CE and !).

Please refer to the regulatory label provided on the product.

The point of contact for regulatory matters is Hewlett-Packard Company, Dept./MS: HQ-TRE, Herrenberger Strasse 140, 71034 Boeblingen, GERMANY.
