1 Getting started

This chapter identifies the visible hardware features of the HP USB Media Port Replicator and provides the instructions for setting up the port replicator.

 **NOTE:** The port replicator may have features that are not supported by your computer.

Identifying components

Rear components

	Component	Description
(1)	Power connector	Connects the AC adapter to the port replicator. NOTE: The port replicator does not provide power to the computer.
(2)	USB ports (4)	Connect optional USB devices.
(3)	Audio-in (microphone) jack	Connects an optional computer headset microphone, stereo array microphone, or monaural microphone.
(4)	Audio-out (headphone) jack	Produces computer sound when connected to optional powered stereo speakers, headphones, ear buds, a headset, or television audio.
(5)	USB connector	Connects the port replicator to the computer.
(6)	RJ-45 (network) jack	Connects a network cable.
(7)	External monitor port	Connects an optional external VGA monitor or projector.
(8)	Security cable slot	Attaches an optional security cable to the port replicator. NOTE: The security cable is designed to act as a deterrent, but it may not prevent the port replicator from being mishandled or stolen.

Setting up the port replicator

Step 1: Connect to AC power

⚠ **WARNING!** To reduce the risk of electric shock or damage to your equipment:

Plug the power cord into an AC outlet that is easily accessible at all times.

Disconnect power from the product by unplugging the power cord from the AC outlet.

If provided with a 3-pin attachment plug on the power cord, plug the cord into a grounded (earthed) 3-pin outlet. Do not disable the power cord grounding pin, for example, by attaching a 2-pin adapter. The grounding pin is an important safety feature. It is possible to receive an electric shock from a system that is not properly grounded.

1. Connect the computer AC adapter to the power connector (1).
2. Connect the AC power cord to the AC adapter (2).
3. Connect the AC power cord to the AC outlet (3).

Step 2: Connect the computer

To connect the computer to the port replicator:

1. Connect the USB cable to the USB connector on the port replicator (1).

2. Connect the USB cable to a USB port on the computer (2).

 **NOTE:** The location of the USB port on your computer varies by computer series and model.

Step 3: Prevent the computer from sleeping

To ensure that the computer does not initiate Sleep or Standby when the display is closed:

1. Open the Windows Control Panel Power Options page, and then click the **Advanced** tab.
2. In the **Power Buttons** section, click **Do nothing** from the **When I close the lid of my portable computer** list, and then click **OK**.

 **NOTE:** For instructions on accessing the Power Options page, refer to Help and Support on the computer.

2 Using the port replicator

Port replicator guidelines

- **Operating systems**—For optimal performance, use the port replicator with HP or Compaq computers running Microsoft® Windows® 7, Windows XP, or Windows Vista® operating systems.
- **Power**—To use port replicator features, AC power must be connected to the port replicator.
- **Connecting and disconnecting**—The computer can be connected or disconnected from the port replicator whether the computer is on or off.
- **External devices**—When the computer is connected to the port replicator, you may attach external devices to the ports on the rear panel of the port replicator or to the ports on the computer.

Connecting to a network

You can connect your computer through the port replicator to a network. This requires an Ethernet cable (purchased separately).

1. Connect the port replicator to your computer.
2. Connect one end of the Ethernet cable to the RJ-45 (network) jack on the port replicator **(1)** and the other end to a RJ-45 wall jack **(2)** or router.

Connecting USB devices

The port replicator has 4 USB ports. Use these ports to connect optional external USB devices, such as a keyboard or mouse.

Connecting to a VGA display device

The port replicator can also be connected to an external VGA display device, such as a monitor or a projector, through the external monitor port.

To connect an external VGA display device:

1. Connect the device cable to the external monitor port on the back of the port replicator.
2. If using Windows 7, press **fn+f4** on the computer one or more times to switch the screen image to the external display device.

 **NOTE:** If you are not using Windows 7, the computer will automatically detect the external device. Refer to Help and Support for more information.

NOTE: To use extended display, refer to the operating system display settings of the computer.

NOTE: If the computer lid switch is set to initiate Standby or Sleep when the display is closed, do not close the computer display while the computer is connected to an external display device. You can modify lid switch settings through the computer power options.

 **NOTE:** The port replicator does not support viewing Blu-ray and other protected content on a display device connected to the external monitor port on the port replicator.

Connecting audio

You can connect headphones or speakers directly into the headphone jack on the port replicator. In addition, you can also connect analog audio devices.

 **NOTE:** Do not connect more than one audio device to the port replicator.

NOTE: The headphone jack on the computer is disabled when an audio device is connected to the port replicator, or when the port replicator is connected to the HP USB Notebook Speaker (purchased separately).

Connecting analog audio devices

To connect analog audio:

1. Connect one end of an audio Y-cable (purchased separately) to the headphone jack on the port replicator (1).
2. Connect the other end to the red and white audio-in jacks on your television or stereo equipment (2). Refer to your television or stereo equipment user guide for the jack names and locations.

Connecting an optional security cable

 **NOTE:** The security cable is designed to act as a deterrent, but it may not prevent the port replicator from being mishandled or stolen.

To install a security cable:

1. Loop the security cable around a secured object.
2. Insert the key (1) into the cable lock (2).
3. Insert the cable lock into the security cable slot on the port replicator (3), and then turn the key.

3 Troubleshooting

Solving common problems

The following tables list possible problems and the recommended solutions.

General use and connection problems

Problem	Possible cause	Solution
The ports or jacks on the port replicator are not working.	The port replicator is not connected to AC power.	Connect the AC adapter to the power connector on the port replicator and to an AC outlet.
	The computer is not connected to the port replicator correctly.	Disconnect the USB cable from the computer, and then reconnect the cable to the computer.

Audio problems

Problem	Possible cause	Solution
Headphones or other audio device connected to the computer does not produce sound.	Headphones or another audio device is connected to the headphone jack on the port replicator. Using the headphone jack on the port replicator mutes sound through the computer.	Disconnect the headphones or other audio device from the headphone jack on the port replicator, or use the device connected to it.
	More than one audio device is connected to the port replicator.	Be sure that only one audio device is connected to the port replicator.
A microphone connected to the computer does not work.	A microphone is connected to the port replicator. While a microphone is connected to the port replicator, the microphone jack on the computer is disabled.	Either use the microphone connected to the port replicator or disconnect it.
A connected home entertainment system does not have audio.	Audio is not connected properly.	Be sure that the port replicator is properly connected to the home entertainment system.

Video problems

Problem	Possible cause	Solution
A video device connected to the external monitor port on the computer displays a black screen when playing Blu-Ray or other protected content.	The port replicator does not support viewing Blu-Ray or other protected content on an external display device connected to the external monitor port on the port replicator.	Use the display device on the computer.

Getting more information

- For comprehensive information about your computer, as well as governmental agency and safety information about the use of your computer, access Help and Support by clicking **Start**, and then clicking **Help and Support**.
- The HP Web site (<http://www.hp.com>) provides product news and software updates.

Technical support

If you cannot solve a problem using the troubleshooting tips in this chapter, you may need to contact technical support.

For the fastest possible resolution of your problem, have the following information available when you call or e-mail:

- The computer and port replicator model types
- Serial numbers for the computer and port replicator
- Dates the computer and port replicator were purchased
- Conditions under which the problem occurred
- Error messages that have been displayed
- Hardware configuration of the computer
- Hardware and software you are using
- The manufacturer and model of the printer or other accessories connected to the computer and port replicator
- Configuration settings, including contents of the system files

To contact technical support, click **Start**, click **Help and Support**, and then click **Contact support** to start a chat session with a support specialist.
