HP Pavilion TouchSmart 11 Notebook PC

Maintenance and Service Guide
Product notice

This guide describes features that are common to most models. Some features may not be available on your computer.

Not all features are available in all editions of Windows 8. This computer may require upgraded and/or separately purchased hardware, drivers, and/or software to take full advantage of Windows 8 functionality. See for details.
Safety warning notice

⚠️ **WARNING!** To reduce the possibility of heat-related injuries or of overheating the device, do not place the device directly on your lap or obstruct the device air vents. Use the device only on a hard, flat surface. Do not allow another hard surface, such as an adjoining optional printer, or a soft surface, such as pillows or rugs or clothing, to block airflow. Also, do not allow the AC adapter to contact the skin or a soft surface, such as pillows or rugs or clothing, during operation. The device and the AC adapter comply with the user-accessible surface temperature limits defined by the International Standard for Safety of Information Technology Equipment (IEC 60950).

<td><strong>Product Name</strong></td>
<td>HP Pavilion TouchSmart 11 Notebook PC</td>
</tr>
</tbody>
</table>
| **Processor** | AMD® A6-1450 1.40-GHz processor (1.00-GHz front-side bus (FSB), 2.00-MB L2 cache, DDR3L-1066-MHz, quad core, 8 W, with dynamic configurable TDP)  

AMD A4-1250 1.00-GHz processor (1.00-GHz FSB, 1.00-MB L2 cache, DDR3L-1333-MHz, dual core, 8 W) |
| **Chipset** | AMD system on chip (SoC) fusion controller hub (FCH) integrated in accelerated processing unit (APU)                                        |
| **Graphics** | Internal graphics:  

- AMD Radeon™ HD 8250 Graphics on computer models equipped with an AMD A6-1450 processor  

- AMD Radeon HD 8210 Graphics on computer models equipped with an AMD A4-1250 processor  

Support for DX11, HD decode, and HDMI |
| **Panel** | 11.6-in (1366×768), high-definition (HD), white light emitting diode (WLED), AntiGlare, TouchScreen with MultiTouch enabled; 16:9 ultra-wide aspect ratio; typical brightness: 200 nits; slim (3.6-mm)  

Supports low-voltage differential signaling (LVDS) |
| **Memory** | One customer-accessible/upgradable memory module slots  

Support for DDR3L-1066-MHz at 1.35-V single channel (DDR3L-1600-MHz downgrade to DDR3L-1066-MHz)  

Support for 8192-MB of system RAM in the following configurations:  

- 8192 MB × 1  

- 4096 MB × 1 |

## Display

<table>
<thead>
<tr>
<th>Item</th>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1)</td>
<td>Internal display switch</td>
<td>Turns off the display and initiates Sleep if the display is closed while the power is on.</td>
</tr>
</tbody>
</table>

**NOTE:** The internal display switch is not visible from the outside of the computer.

| (2)  | WLAN antennas (2)*         | Send and receive wireless signals to communicate with wireless local area networks (WLANs). |

**NOTE:** To set up a WLAN and connect to the Internet, you need a broadband modem (either DSL or cable, purchased separately), high-speed Internet service purchased from an Internet service provider, and a wireless router (purchased separately).

<p>| (3)  | Webcam light               | On: The webcam is in use.                                                   |</p>
<table>
<thead>
<tr>
<th>Item</th>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(4)</td>
<td>HP TrueVision HD Webcam</td>
<td>Records video, captures still photographs, and provides access to video conferences and online chat by means of streaming video. To use the webcam, from the Start screen, type ( c ), and then select <strong>CyberLink YouCam</strong> from the list of applications.</td>
</tr>
<tr>
<td>(5)</td>
<td>Internal microphone</td>
<td>Records sound.</td>
</tr>
</tbody>
</table>

*The antennas are not visible from the outside of the computer. For optimal transmission, keep the areas immediately around the antennas free from obstructions. For wireless regulatory notices, see the section of the Regulatory, Safety, and Environmental Notices that applies to your country or region. To access this guide, from the Start screen, type \( \text{support} \), select **HP Support Assistant** app, select **My computer**, and then select **User guides**.
Buttons and speakers

<table>
<thead>
<tr>
<th>Item</th>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
</table>
| (1)  | Power button| • When the computer is off, press the button to turn on the computer.  
• When the computer is on, press the button briefly to initiate Sleep.  
• When the computer is in the Sleep state, press the button briefly to exit Sleep.  
• When the computer is in Hibernation, press the button briefly to exit Hibernation.  

**CAUTION:** Pressing and holding down the power button will result in the loss of unsaved information. If the computer has stopped responding and Microsoft Windows shutdown procedures are ineffective, press and hold the power button down for at least 5 seconds to turn off the computer. To learn more about your power settings, see your power options. From the Start screen, type `power`, select `Settings`, and then select `Power Options` from the list of applications. |
<p>| (2)  | Speakers (2)| Produce sound. |</p>
<table>
<thead>
<tr>
<th>Item</th>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1)</td>
<td>esc key</td>
<td>Reveals system information when pressed in combination with the fn key.</td>
</tr>
<tr>
<td>(2)</td>
<td>fn key</td>
<td>Executes frequently used system functions when pressed in combination with the esc key.</td>
</tr>
</tbody>
</table>
| (3)  | Windows key | Returns you to the Start screen from an open app or the Windows desktop.  
**NOTE:** Pressing the Windows key again will return you to the previous screen. |
| (4)  | Action keys | Execute frequently used system functions. |
## Lights

<table>
<thead>
<tr>
<th>Item</th>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
</table>
| (1)  | Power light | - On: The computer is on.  
- Blinking: The computer is in the Sleep state, a power-saving state. The computer shuts off power to the display and other unneeded components.  
- Off: The computer is off or in Hibernation. Hibernation is a power-saving state that uses the least amount of power. |
| (2)  | Caps lock light | On: Caps lock is on, which switches the keys to all capital letters. |
| (3)  | Mute light   | - Amber: Computer sound is off.  
- Off: Computer sound is on. |
| (4)  | Wireless light | On: An integrated wireless device, such as a WLAN device and/or a Bluetooth device, is on.  
**NOTE:** On some models, the wireless light is amber when all wireless devices are off. |
## TouchPad

<table>
<thead>
<tr>
<th>Item</th>
<th>Component</th>
<th>Description</th>

4 Removal and replacement procedures preliminary requirements

Tools required

You will need the following tools to complete the removal and replacement procedures:

- Flat-bladed screw driver
- Magnetic screw driver
- Phillips P0 and P1 screw drivers

Service considerations

The following sections include some of the considerations that you must keep in mind during disassembly and assembly procedures.

NOTE: As you remove each subassembly from the computer, place the subassembly (and all accompanying screws) away from the work area to prevent damage.

Plastic parts

⚠️ CAUTION: Using excessive force during disassembly and reassembly can damage plastic parts. Use care when handling the plastic parts. Apply pressure only at the points designated in the maintenance instructions.
Cables and connectors

⚠️ **CAUTION:** When servicing the computer, be sure that cables are placed in their proper locations during the reassembly process. Improper cable placement can damage the computer.

Cables must be handled with extreme care to avoid damage. Apply only the tension required to unseat or seat the cables during removal and insertion. Handle cables by the connector whenever possible. In all cases, avoid bending, twisting, or tearing cables. Be sure that cables are routed in such a way that they cannot be caught or snagged by parts being removed or replaced. Handle flex cables with extreme care; these cables tear easily.

Drive handling

⚠️ **CAUTION:** Drives are fragile components that must be handled with care. To prevent damage to the computer, damage to a drive, or loss of information, observe these precautions:

Before removing or inserting a hard drive, shut down the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

Before handling a drive, be sure that you are discharged of static electricity. While handling a drive, avoid touching the connector.

Before removing a diskette drive or optical drive, be sure that a diskette or disc is not in the drive and be sure that the optical drive tray is closed.

Handle drives on surfaces covered with at least one inch of shock-proof foam.

Avoid dropping drives from any height onto any surface.

After removing a hard drive, an optical drive, or a diskette drive, place it in a static-proof bag.

Avoid exposing an internal hard drive to products that have magnetic fields, such as monitors or speakers.

Avoid exposing a drive to temperature extremes or liquids.

If a drive must be mailed, place the drive in a bubble pack mailer or other suitable form of protective packaging and label the package “FRAGILE.”
Grounding guidelines

Electrostatic discharge damage

Electronic components are sensitive to electrostatic discharge (ESD). Circuitry design and structure determine the degree of sensitivity. Networks built into many integrated circuits provide some protection, but in many cases, ESD contains enough power to alter device parameters or melt silicon junctions.

A discharge of static electricity from a finger or other conductor can destroy static-sensitive devices or microcircuity. Even if the spark is neither felt nor heard, damage may have occurred.

An electronic device exposed to ESD may not be affected at all and can work perfectly throughout a normal cycle. Or the device may function normally for a while, then degrade in the internal layers, reducing its life expectancy.

⚠️ **CAUTION:** To prevent damage to the computer when you are removing or installing internal components, observe these precautions:

- Keep components in their electrostatic-safe containers until you are ready to install them.
- Before touching an electronic component, discharge static electricity by using the guidelines described in this section.
- Avoid touching pins, leads, and circuitry. Handle electronic components as little as possible.
- If you remove a component, place it in an electrostatic-safe container.

The following table shows how humidity affects the electrostatic voltage levels generated by different activities.

⚠️ **CAUTION:** A product can be degraded by as little as 700 V.

<table>
<thead>

**Packaging and transporting guidelines**

Follow these grounding guidelines when packaging and transporting equipment:

- To avoid hand contact, transport products in static-safe tubes, bags, or boxes.
- Protect ESD-sensitive parts and assemblies with conductive or approved containers or packaging.
- Keep ESD-sensitive parts in their containers until the parts arrive at static-free workstations.
- Place items on a grounded surface before removing items from their containers.
- Always be properly grounded when touching a component or assembly.
- Store reusable ESD-sensitive parts from assemblies in protective packaging or nonconductive foam.
- Use transporters and conveyors made of antistatic belts and roller bushings. Be sure that mechanized equipment used for moving materials is wired to ground and that proper materials are selected to avoid static charging. When grounding is not possible, use an ionizer to dissipate electric charges.

**Workstation guidelines**

Follow these grounding workstation guidelines:

- Cover the workstation with approved static-shielding material.
- Use a wrist strap connected to a properly grounded work surface and use properly grounded tools and equipment.
- Use conductive field service tools, such as cutters, screw drivers, and vacuums.
- When fixtures must directly contact dissipative surfaces, use fixtures made only of static-safe materials.
- Keep the work area free of nonconductive materials, such as ordinary plastic assembly aids and Styrofoam.
- Handle ESD-sensitive components, parts, and assemblies by the case or PCM laminate. Handle these items only at static-free workstations.
- Avoid contact with pins, leads, or circuitry.
- Turn off power and input signals before inserting or removing connectors or test equipment.
Equipment guidelines

Grounding equipment must include either a wrist strap or a foot strap at a grounded workstation.

- When seated, wear a wrist strap connected to a grounded system. Wrist straps are flexible straps with a minimum of one megohm ±10% resistance in the ground cords. To provide proper ground, wear a strap snugly against the skin at all times. On grounded mats with banana-plug connectors, use alligator clips to connect a wrist strap.

- When standing, use foot straps and a grounded floor mat. Foot straps (heel, toe, or boot straps) can be used at standing workstations and are compatible with most types of shoes or boots. On conductive floors or dissipative floor mats, use foot straps on both feet with a minimum of one megohm resistance between the operator and ground. To be effective, the conductive must be worn in contact with the skin.

The following grounding equipment is recommended to prevent electrostatic damage:

- Antistatic tape
- Antistatic smocks, aprons, and sleeve protectors
- Conductive bins and other assembly or soldering aids
- Nonconductive foam
- Conductive tabletop workstations with ground cords of one megohm resistance
- Static-dissipative tables or floor mats with hard ties to the ground
- Field service kits
- Static awareness labels
- Material-handling packages
- Nonconductive plastic bags, tubes, or boxes
- Metal tote boxes
- Electrostatic voltage levels and protective materials

The following table lists the shielding protection provided by antistatic bags and floor mats.

Component replacement procedures

Please read and follow the procedures described here to access and replace Customer Self-Repair parts successfully.

Details about your computer, including model, serial number, product key, and length of warranty, are on the service tag at the bottom of your computer. See Locating the serial number, product number, and model number on page 13 for details.

This chapter provides removal and replacement procedures for Customer Self-Repair parts.

There are as many as 9 screws that must be removed, replaced, and/or loosened when servicing Customer Self-Repair parts. Make special note of each screw size and location during removal and replacement.
Battery

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>3-cell, 36-Wh, 3.20-Ah, Li-ion battery</td>
<td>729892-001</td>
</tr>
</tbody>
</table>

Before removing the battery, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

Remove the battery:

⚠ **WARNING!** To reduce potential safety issues, use only the user-replaceable battery provided with the computer, a replacement battery provided by HP, or a compatible battery purchased from HP.

⚠ **CAUTION:** Removing a user-replaceable battery that is the sole power source for the computer can cause loss of information. To prevent loss of information, save your work or shut down the computer through Windows before removing the battery.

1. Turn the computer upside down on a flat surface.

2. Position the computer with the rear toward you.

3. Slide the battery lock latch (1) to the unlocked position.

 NOTE: The battery lock latch automatically returns to its original position when the battery is removed.

4. Slide the battery release latch (2) to release the battery.

5. Remove the battery (3).

Reverse this procedure to install the battery.
NOTE: This section applies only to computer models equipped with an Intel processor.

### Service cover

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service cover</td>
<td>737253-001</td>
</tr>
</tbody>
</table>

Before removing the service cover, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27).

Remove the service cover:

1. Lift up on the rear edge of the service cover (1) until the left and right sides detach from the computer.

2. Remove the service cover (2).

Reverse this procedure to install the service cover.
**Hard drive**

**NOTE:** The hard drive spare part kit does not include the hard drive bracket, hard drive connector cable, and screws. These components are included in the Hard Drive Hardware Kit, spare part number 731424-001.

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>500-GB, 5400-rpm, 7.0-mm</td>
<td>683802-001</td>
</tr>
<tr>
<td>320-GB, 5400-rpm, 7.0-mm</td>
<td>645193-001</td>
</tr>
</tbody>
</table>

Before removing the hard drive, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the battery (see **Battery on page 27**).
5. Remove the service cover (see **Service cover on page 28**).

Remove the hard drive:

1. Disconnect the hard drive connector cable (1) from the system board.
2. Release the hard drive connector cable from the routing channel (2) built into the base enclosure.
3. Remove the four Phillips PM2.0×2.75 screws (3) that secure the hard drive to the computer.
4. Remove the hard drive.

5. If it is necessary to disassemble the hard drive, perform the following steps:
   
   a. Position the hard drive with the connector toward you.
   
   b. Disconnect the hard drive connector cable (1) from the hard drive.
   
   c. Remove the four Phillips PM3.0×3.25 screws (2) that secure the hard drive bracket to the hard drive.
   
   d. Remove the hard drive bracket (3) from the hard drive.

   The hard drive bracket, hard drive connector cable, and screws are available in the Hard Drive Hardware Kit, spare part number 731424-001.
Reverse this procedure to install the hard drive.

**WLAN module**

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Atheros AR9485 802.11b/g/n WiFi Adapter</td>
<td>675794-001</td>
</tr>
<tr>
<td>Broadcom BCM943228HM8 802.11abgn 2x2 Wi-Fi Adapter, Broadcom Bluetooth 4.0 Adapter</td>
<td>730668-001</td>
</tr>
<tr>
<td>Ralink RT3290LE 802.11b/g/n 1x1 WiFi and Bluetooth 4.0 Combo Adapter</td>
<td>690020-001</td>
</tr>
<tr>
<td>Realtek RTL8188EE 802.11bgn Wi-Fi Adapter</td>
<td>709848-001</td>
</tr>
</tbody>
</table>

⚠️ **CAUTION:** To prevent an unresponsive system, replace the wireless module only with a wireless module authorized for use in the computer by the governmental agency that regulates wireless devices in your country or region. If you replace the module and then receive a warning message, remove the module to restore device functionality, and then contact technical support.

Before removing the WLAN module, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see **Battery on page 27**).

5. Remove the service cover (see **Service cover on page 28**).
Remove the WLAN module:

1. Disconnect the WLAN antenna cables (1) from the terminals on the WLAN module.

   **NOTE:** The WLAN antenna cable labeled “1” connects to the WLAN module “Main” terminal labeled “1”. The WLAN antenna cable labeled “2” connects to the WLAN module “Aux” terminal labeled “2”.

2. Remove the Phillips PM2.0×3.5 screw (2) that secures the WLAN module to the system board. (The WLAN module tilts up.)

3. Remove the WLAN module (3) by pulling the module away from the slot at an angle.

   **NOTE:** If the WLAN antenna cables are not connected to the terminals on the WLAN module, the protective sleeves must be installed on the antenna connectors, as shown in the following illustration.
Reverse this procedure to install the WLAN module.

## Memory module

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>8-GB (PC3L, 12800, 1600-MHz)</td>
<td>693374-001</td>

<tr>
<td>4-GB (PC3L, 12800, 1600-MHz)</td>
<td>691740-001</td>
</tr>
</tbody>
</table>

### Update BIOS before adding memory modules

Before adding new memory, make sure you update the computer to the latest BIOS.

⚠️ **CAUTION:** Failure to update the computer to the latest BIOS prior to installing new memory may result in various system problems.

To update BIOS:

2. Click Support & Drivers > click Drivers & Software.
3. In the Enter a product name/number box, type the computer model information, and then click Search.
4. Click the link for the computer model.
5. Select the operating system, and then click Next.
6. Under Step 2: Select a Download, click the BIOS link.
7. Click the link for the most recent BIOS.
8. Click the Download button, and then follow the on-screen instructions.

Before removing a memory module, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the battery (see Battery on page 27).
5. Remove the service cover (see Service cover on page 28).

Remove the memory module:

1. Spread the retaining tabs (1) on each side of the memory module slot to release the memory module. (The memory module tilts up.)
2. Remove the memory module (2) by pulling the module away from the slot at an angle.

Reverse this procedure to install a memory module.
6 Removal and replacement procedures for Authorized Service Provider parts

⚠️ CAUTION: Components described in this chapter should only be accessed by an authorized service provider. Accessing these parts can damage the computer or void the warranty.

Component replacement procedures

This chapter provides removal and replacement procedures for Authorized Service Provider only parts.

There are as many as 44 screws that must be removed, replaced, and/or loosened when servicing the computer. Make special note of each screw size and location during removal and replacement.

RTC battery

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>RTC battery (includes double-sided tape)</td>
<td>738824-001</td>
</tr>
</tbody>
</table>

Before removing the RTC battery, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27).

5. Remove the service cover (see Service cover on page 28).

Remove the RTC battery:

1. Disconnect the RTC battery cable (1) from the system board.

2. Release the RTC battery cable (2) from the routing channel built into the bottom cover.
3. Detach the RTC battery (3) from the bottom cover. (The RTC battery is attached to the bottom cover by double-sided tape.)

4. Remove the RTC battery.

Reverse this procedure to install the RTC battery.
Display assembly

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>11.6-inch, AG, SVA, LED TouchScreen display assembly (includes webcam/microphone module and wireless antenna cables)</td>
<td>730892-001</td>
</tr>
</tbody>
</table>

Before removing the display assembly, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the battery (see Battery on page 27).
5. Remove the service cover (see Service cover on page 28).

Remove the display assembly:

1. Remove the rear rubber feet (1).
   The rear rubber feet are included in the Rubber Feet Kit, spare part number 730888-001.
2. Remove the two Phillips PM2.2×5.5 screws (2) that secure the rear corner covers to the computer.
3. Remove the left and right rear corner covers (3).

The rear corner covers are included in the bottom cover spare part kit, spare part number 730887-001.

4. Disconnect the wireless antenna cables (1) from the WLAN module.

5. Release the wireless antenna cables from the retention clips (2) and routing channel built into the bottom cover.

6. Disconnect the display panel cable (3) from the system board.
7. Release the display panel cable from the retention clips (4) and routing channel built into the bottom cover.

8. Remove the four Phillips PM2.0×5.5 screws (1) and the two Phillips PM2.5×10.5 screws (2) that secure the display assembly to the computer.

9. Open the display hinges (3) as far as they will open.

10. Separate the display assembly (4) from the computer.
Reverse this procedure to install the display assembly.

Power connector cable

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power connector cable (includes bracket)</td>
<td>730900-001</td>
</tr>
</tbody>
</table>

Before removing the power connector cable, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27).

5. Remove the service cover (see Service cover on page 28).

Remove the power connector cable:

1. Remove the two Phillips PM2.0×5.5 screws (1) and the two Phillips PM2.5×10.5 screws (2) that secure the display assembly right hinge to the computer.

2. Open the display assembly right hinge (3) as far as it will open.

3. Disconnect the power connector cable (4) from the system board.

4. Release the power connector cable from the retention clips (2) and routing channel built into the bottom cover.
5. Release the power connector (6) from the clips and mold built into the bottom cover.

6. Remove the power connector cable.

Reverse this procedure to install the power connector cable.
Before removing the bottom cover, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the battery (see Battery on page 27).
5. Remove the service cover (see Service cover on page 28).
6. Disconnect the RTC battery cable from the system board (see RTC battery on page 35).
7. Remove the display assembly (see Display assembly on page 37).

NOTE: When replacing the bottom cover, be sure that the RTC battery is removed from the defective bottom cover and installed in the replacement bottom cover.

Remove the bottom cover:

1. Release the zero insertion force (ZIF) connector (1) to which the keyboard cable is attached, and then disconnect the keyboard cable from the system board.
2. Release the ZIF connector (2) to which the TouchPad button board cable is attached, and then disconnect the TouchPad button board cable from the system board.
3. Release the ZIF connector (3) to which the power button board ribbon cable is attached, and then disconnect the power button board ribbon cable from the system board.

4. Remove the thirteen Phillips PM2.0×4.5 screws that secure the bottom cover to the top cover.
5. Remove the bottom cover from the top cover.

Reverse this procedure to install the bottom cover.

**Power button board**

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power button board (includes cable)</td>
<td>730899-001</td>
</tr>
</tbody>
</table>

Before removing the power button board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see [Battery on page 27](#)), and then remove the following components:
   a. Service cover (see [Service cover on page 28](#))
   b. Display assembly (see [Display assembly on page 37](#))
   c. Bottom cover (see [Bottom cover on page 42](#))

Remove the power button board:

1. Remove the two Phillips PM2.0×2.75 screws (1) that secure the power button board to the top cover.

2. Detach the power button board cable (2) from the top cover. (The power button board cable is attached to the top cover with double-sided tape.)
3. Remove the power button board (3) and cable.

Reverse this procedure to install the power button board.
Before removing the TouchPad button board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27), and then remove the following components:
   a. Service cover (see Service cover on page 28)
   b. Display assembly (see Display assembly on page 37)
   c. Bottom cover (see Bottom cover on page 42)

Remove the TouchPad button board:

1. Release the ZIF connector (1) to which the TouchPad board cable is attached, and then disconnect the TouchPad board cable from the TouchPad board.

2. Remove the two Phillips PM2.0×4.5 screws (2) that secure the TouchPad button board to the top cover.

3. Remove the TouchPad button board bracket (3).
4. Remove the TouchPad button board (4) and cables.

Reverse this procedure to install the TouchPad button board.
**Media card reader board**

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Media card reader board (includes cable)</td>
<td>730901-001</td>
</tr>
</tbody>
</table>

Before removing the media card reader board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see [Battery on page 27](#)), and then remove the following components:
   - a. Service cover (see [Service cover on page 28](#))
   - b. Display assembly (see [Display assembly on page 37](#))
   - c. Bottom cover (see [Bottom cover on page 42](#))

Remove the media card reader board:

1. Release the ZIF connector (1) to which the media card reader board cable is attached, and then disconnect the media card reader board cable from the system board.

2. Remove the Phillips PM2.0×4.5 screw (2) that secures the media card reader board to the top cover.

3. Remove the media card reader board (4) and cable.
Reverse this procedure to install the media card reader board.

**Fan**

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fan (includes cable and cowling)</td>
<td>730903-001</td>
</tr>
</tbody>
</table>

Before removing the fan, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the battery (see [Battery on page 27](#)), and then remove the following components:
   - a. Service cover (see [Service cover on page 28](#))
   - b. Display assembly (see [Display assembly on page 37](#))
   - c. Bottom cover (see [Bottom cover on page 42](#))

Remove the fan:

1. Disconnect the fan cable (1) from the system board.
2. Detach the cowling tape (2) that secures the fan to the heat sink.
3. Remove the two Phillips PM2.0×4.5 screws (3) that secure the fan to the system board.
4. Remove the fan (4).

Reverse this procedure to install the fan.
Monitor connector board

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitor connector board (includes cable)</td>
<td>730897-001</td>
</tr>
</tbody>
</table>

Before removing the monitor connector board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27), and then remove the following components:
   a. Service cover (see Service cover on page 28)
   b. Display assembly (see Display assembly on page 37)
   c. Bottom cover (see Bottom cover on page 42)

Remove the monitor connector board:

1. Disconnect the monitor connector board cable (1) from the system board.

2. Remove the Phillips PM2.0×2.25 broad head screw (2) that secures the monitor connector board to the top cover.
3. Remove the monitor connector board (3) and cable.

Reverse this procedure to install the monitor connector board.
**System board**

NOTE: The system board spare part kit includes replacement thermal material.

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equipped with an AMD A6-1450 processor, a graphics subsystem with UMA memory, and the Windows 8 Standard operating system</td>
<td>730894-501</td>
</tr>
<tr>
<td>Equipped with an AMD A6-1450 processor, a graphics subsystem with UMA memory, and the Linux operating system</td>
<td>730894-001</td>
</tr>
<tr>
<td>Equipped with an AMD A4-1250 processor, a graphics subsystem with UMA memory, and the Windows 8 Standard operating system</td>
<td>730893-501</td>
</tr>
<tr>
<td>Equipped with an AMD A4-1250 processor, a graphics subsystem with UMA memory, and the Linux operating system</td>
<td>730893-001</td>
</tr>
</tbody>
</table>

Before removing the system board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27), and then remove the following components:
   a. Service cover (see Service cover on page 28)
   b. Hard drive (see Hard drive on page 29)
   c. Display assembly (see Display assembly on page 37)
   d. Bottom cover (see Bottom cover on page 42)
   e. Media card reader board (see Media card reader board on page 48)
   f. Fan (see Fan on page 49)

NOTE: When replacing the system board, be sure that the following components are removed from the defective system board and installed on the replacement system board:

- WLAN module (see WLAN module on page 31)
- Memory module (see Memory module on page 33)
- Heat sink (see Heat sink on page 55)

Remove the system board:

1. Disconnect the monitor connector board cable (1) from the system board.

2. Disconnect the speaker cable (2) from the system board.
3. Release the speaker cable from the tabs (3) built into the system board.

4. Remove the three Phillips PM2.0×4.5 screws (1) that secure the system board to the top cover.

5. Lift the left side of the system board (2) until it rests at an angle.
6. Remove the system board (3) by sliding it up and to the left an angle.

Reverse this procedure to install the system board.

**Heat sink**

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heat sink (includes 4 captive screws and replacement thermal material)</td>
<td>730902-001</td>
</tr>
</tbody>
</table>

Before removing the heat sink, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the battery (see Battery on page 27), and then remove the following components:
   a. Service cover (see Service cover on page 28)
   b. Hard drive (see Hard drive on page 29)
   c. Display assembly (see Display assembly on page 37)
   d. Bottom cover (see Bottom cover on page 42)
e. Media card reader board (see Media card reader board on page 48)

f. Fan (see Fan on page 49)

g. System board (see System board on page 53)

Remove the heat sink:

1. Turn the system board upside down, with the front toward you.

2. Following the 1 through 4 sequence stamped into the heat sink, loosen the four captive Phillips PM2.0×2.5 screws (1) that secure the heat sink to the system board.

3. Remove the heat sink (2).

**NOTE:** Due to the adhesive quality of the thermal material located between the heat sink and the system board components, it may be necessary to move the heat sink from side to side to detach it.

**NOTE:** The thermal material must be thoroughly cleaned from the surfaces of the heat sink and the system board components each time the heat sink is removed. Thermal paste is used on the processor (1) and the heat sink section (2) that services it.
Reverse this procedure to install the heat sink.

**Speakers**

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Speaker Kit (includes left and right speakers and cables)</td>
<td>730890-001</td>
</tr>
</tbody>
</table>

Before removing the speakers, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the battery (see Battery on page 27), and then remove the following components:
   a. Service cover (see Service cover on page 28)
   b. Hard drive (see Hard drive on page 29)
   c. Display assembly (see Display assembly on page 37)
   d. Bottom cover (see Bottom cover on page 42)
   e. Media card reader board (see Media card reader board on page 48)
f. Fan (see Fan on page 49)

g. System board (see System board on page 53)

Remove the speakers:

1. Remove the two Phillips PM2.0×3.75 screws (1) and the two Phillips PM2.0×2.75 screws (2) that secure the speakers to the bottom cover.

2. Remove the speakers (3).

Reverse this procedure to install the speakers.
Setup Utility, or Basic Input/Output System (BIOS), controls communication between all the input and output devices on the system (such as disk drives, display, keyboard, mouse, and printer). Setup Utility (BIOS) includes settings for the types of devices installed, the startup sequence of the computer, and the amount of system and extended memory.

**Starting Setup Utility (BIOS)**

To start Setup Utility (BIOS), turn on or restart the computer, quickly press esc, and then press f10.

Information about how to navigate in Setup Utility (BIOS) is located at the bottom of the screen.

**NOTE:** Use extreme care when making changes in Setup Utility (BIOS). Errors can prevent the computer from operating properly.

**Updating the BIOS**

Updated versions of the BIOS may be available on the HP website.

Most BIOS updates on the HP website are packaged in compressed files called SoftPaqs.

Some download packages contain a file named Readme.txt, which contains information regarding installing and troubleshooting the file.

**Determining the BIOS version**

To determine whether available BIOS updates contain later BIOS versions than those currently installed on the computer, you need to know the version of the system BIOS currently installed.

BIOS version information (also known as ROM date and System BIOS) can be revealed by pressing fn +esc (if you are already in Windows) or by using Setup Utility (BIOS).

2. Use the arrow keys to select Main.
3. To exit Setup Utility (BIOS) without saving your changes, use the arrow keys to select **Exit**, select **Exit Discarding Changes**, and then press **enter**.

4. Select **Yes**.

### Downloading a BIOS update

⚠️ **CAUTION:** To reduce the risk of damage to the computer or an unsuccessful installation, download and install a BIOS update only when the computer is connected to reliable external power using the AC adapter. Do not download or install a BIOS update while the computer is running on battery power, docked in an optional docking device, or connected to an optional power source. During the download and installation, follow these instructions:

Do not disconnect power from the computer by unplugging the power cord from the AC outlet.

Do not shut down the computer or initiate Sleep.

Do not insert, remove, connect, or disconnect any device, cable, or cord.

1. From the Start screen, type **support**, and then select the **HP Support Assistant** app.

2. Click **Updates and tune-ups**, and then click **Check for HP updates now**.

3. Follow the on-screen instructions.

4. At the download area, follow these steps:

   a. Identify the most recent BIOS update and compare it to the BIOS version currently installed on your computer. If the update is more recent than your BIOS, make a note of the date, name, or other identifier. You may need this information to locate the update later, after it has been downloaded to your hard drive.

   b. Follow the on-screen instructions to download your selection to the hard drive.

      If the update is more recent than your BIOS, make a note of the path to the location on your hard drive where the BIOS update is downloaded. You will need to access this path when you are ready to install the update.

   **NOTE:** If you connect your computer to a network, consult the network administrator before installing any software updates, especially system BIOS updates.

   BIOS installation procedures vary. Follow any instructions that are revealed on the screen after the download is complete. If no instructions are revealed, follow these steps:

   1. From the Start screen, type **e**, and then select **File Explorer**.

   2. Click your hard drive designation. The hard drive designation is typically Local Disk (C:).

   3. Using the hard drive path you recorded earlier, open the folder on your hard drive that contains the update.

   4. Double-click the file that has an .exe extension (for example, `filename.exe`).

      The BIOS installation begins.

   5. Complete the installation by following the on-screen instructions.
NOTE: After a message on the screen reports a successful installation, you can delete the downloaded file from your hard drive.

Using HP PC Hardware Diagnostics (UEFI)

HP PC Hardware Diagnostics is a Unified Extensible Firmware Interface (UEFI) that allows you to run diagnostic tests to determine whether the computer hardware is functioning properly. The tool runs outside the operating system so that it can isolate hardware failures from issues that are caused by the operating system or other software components.

To start HP PC Hardware Diagnostics UEFI:

1. Turn on or restart the computer, quickly press esc, and then press f2.

   The BIOS searches three places for the HP PC Hardware Diagnostics (UEFI) tools in the following order:

   a. Connected USB drive

      NOTE: To download the HP PC Hardware Diagnostics (UEFI) tool to a USB drive, see Downloading HP PC Hardware Diagnostics (UEFI) to a USB device on page 61.

   b. Hard drive

   c. BIOS

2. Click the type of diagnostic test you want to run, and then follow the on-screen instructions.

   NOTE: If you need to stop a diagnostic test, press esc.

Downloading HP PC Hardware Diagnostics (UEFI) to a USB device

NOTE: The HP PC Hardware Diagnostics (UEFI) download instructions are provided in English only.

2. Click Support & Drivers, and then click the Drivers & Software tab.

3. Enter the product name in the text box, and then click Search.

4. Select your computer model, and then select your operating system.

5. In the Diagnostic section, click HP UEFI Support Environment.

   – or –

   Click Download, and then select Run.

*1 GB = 1 billion bytes when referring to hard drive storage capacity. Actual accessible capacity is less.

**NOTE:** Certain restrictions and exclusions apply. Contact technical support for details.
Your computer includes tools provided by HP and the operating system to help you safeguard your information and retrieve it if you ever need to. These tools will help you return your computer to a proper working state or even back to the original factory state, all with simple steps.

This chapter provides information about the following processes:

- Creating recovery media and backups
- Restoring and recovering your system

**NOTE:** This guide describes an overview of backing up, restoring and recovering options. For more details about the tools provided, see Help and Support. From the Start screen, type h, and then select Help and Support.
Creating recovery media and backups

Recovery after a system failure is only as good as your most recent backup.

1. After you successfully set up the computer, create HP Recovery media. This step creates a backup of the HP Recovery partition on the computer. The backup can be used to reinstall the original operating system in cases where the hard drive is corrupted or has been replaced.

HP Recovery media you create will provide the following recovery options:

- System Recovery—Reinstalls the original operating system and the programs that were installed at the factory.
- Minimized Image Recovery—Reinstalls the operating system and all hardware-related drivers and software, but not other software applications.
- Factory Reset—Restores the computer to its original factory state by deleting all information from the hard drive and re-creating the partitions. Then it reinstalls the operating system and the software that was installed at the factory.

2. As you add hardware and software programs, create system restore points. A system restore point is a snapshot of certain hard drive contents saved by Windows System Restore at a specific time. A system restore point contains information that Windows uses, such as registry settings. Windows creates a system restore point for you automatically during a Windows update and during other system maintenance (such as a software update, security scanning, or system diagnostics). You can also manually create a system restore point at any time. For more information and steps for creating specific system restore points, see Help and Support. From the Start screen, type h, and then select Help and Support.

3. As you add photos, video, music, and other personal files, create a backup of your personal information. Windows File History can be set to regularly and automatically back up files from libraries, desktop, contacts, and favorites. If files are accidentally deleted from the hard drive and they can no longer be restored from the Recycle Bin, or if files become corrupted, you can restore the files that you backed up using File History. Restoring files is also useful if you ever choose to reset the computer by reinstalling Windows or choose to recover using HP Recovery Manager.

**NOTE:** File History is not enabled by default, so you must turn it on.

For more information and steps for enabling Windows File History, see Help and Support. From the Start screen, type h, and then select Help and Support.
Creating HP Recovery media

HP Recovery Manager is a software program that offers a way to create recovery media after you successfully set up the computer. HP Recovery media can be used to perform system recovery if the hard drive becomes corrupted. System recovery reinstalls the original operating system and the software programs installed at the factory, and then configures the settings for the programs. HP Recovery media can also be used to customize the system or aid in the replacement of a hard drive.

- Only one set of HP Recovery media can be created. Handle these recovery tools carefully, and keep them in a safe place.

- HP Recovery Manager examines the computer and determines the required storage capacity for the blank USB flash drive or the number of blank DVD discs that will be required.

- To create recovery discs, your computer must have an optical drive with DVD writer capability, and you must use only high-quality blank DVD-R, DVD+R, DVD-R DL, or DVD+R DL discs. Do not use rewritable discs such as CD±RW, DVD±RW, double-layer DVD±RW, or BD-RE (rewritable Blu-ray) discs; they are not compatible with HP Recovery Manager software. Or instead you can use a high-quality blank USB flash drive.

- If your computer does not include an integrated optical drive with DVD writer capability, but you would like to create DVD recovery media, you can use an external optical drive (purchased separately) to create recovery discs, or you can obtain recovery discs for your computer from the HP website. For U.S. support, go to http://www.hp.com/go/contactHP. For worldwide support, go to http://welcome.hp.com/country/us/en/wwcontact_us.html. If you use an external optical drive, it must be connected directly to a USB port on the computer; the drive cannot be connected to a USB port on an external device, such as a USB hub.

- Be sure that the computer is connected to AC power before you begin creating the recovery media.

- The creation process can take up to an hour or more. Do not interrupt the creation process.

- If necessary, you can exit the program before you have finished creating all of the recovery DVDs. HP Recovery Manager will finish burning the current DVD. The next time you start HP Recovery Manager, you will be prompted to continue, and the remaining discs will be burned.

To create HP Recovery media:

1. From the Start screen, type recovery, and then select HP Recovery Manager.

2. Select Recovery Media Creation, and then follow the on-screen instructions.

If you ever need to recover the system, see Recovering using HP Recovery Manager on page 69.
There are several options for recovering your system. Choose the method that best matches your situation and level of expertise:

- If you need to restore your personal files and data, you can use Windows File History to restore your information from the backups you created. For more information and steps for using File History, see Help and Support. From the Start screen, type `h`, and then select Help and Support.

- If you need to correct a problem with a preinstalled application or driver, use the Drivers and Applications Reinstall option of HP Recovery Manager to reinstall the individual application or driver.

  From the Start screen, type `recovery`, select HP Recovery Manager, select Drivers and Applications Reinstall, and then follow the on-screen instructions.

- If you want to restore the system to a previous state without losing any personal information, Windows System Restore is an option. System Restore allows you to restore without the requirements of Windows Refresh or a reinstallation. Windows creates system restore points automatically during a Windows update and other system maintenance events. Even if you did not manually create a restore point, you can choose to restore to a previous point, automatically created. For more information and steps for using Windows System Restore, see Help and Support. From the Start screen, type `h`, and then select Help and Support.

- If you want a quick and easy way to recover the system without losing your personal information, settings, or apps that came preinstalled on your computer or were purchased from the Windows Store, consider using Windows Refresh. This option does not require backing up data to another drive. See Using Windows Refresh for quick and easy recovery on page 68.

- If you want to reset your computer to its original state, Windows provides an easy way to remove all personal data, apps, and settings, and reinstall Windows.

  For more information, see Remove everything and reinstall Windows on page 68.

- If you want to reset your computer using a minimized image, you can choose the HP Minimized Image Recovery option from the HP Recovery partition (select models only) or HP Recovery media. Minimized Image Recovery installs only drivers and hardware-enabling applications. Other applications included in the image continue to be available for installation through the Drivers and Applications Reinstall option in HP Recovery Manager.

  For more information, see Recovering using HP Recovery Manager on page 69.

- If you want to recover the computer’s original factory partitioning and content, you can choose the System Recovery option from the HP Recovery media. For more information, see Recovering using HP Recovery Manager on page 69.

- If you have replaced the hard drive, you can use the Factory Reset option of HP Recovery media to restore the factory image to the replacement drive. For more information, see Recovering using HP Recovery Manager on page 69.

- If you wish to remove the recovery partition to reclaim hard drive space, HP Recovery Manager offers the Remove Recovery Partition option.
Using Windows Refresh for quick and easy recovery

When your computer is not working properly and you need to regain system stability, the Windows Refresh option allows you to start fresh and keep what is important to you.

**IMPORTANT:** Refresh removes any traditional applications that were not originally installed on the system at the factory.

**NOTE:** During Refresh, a list of removed traditional applications will be saved so that you have a quick way to see what you might need to reinstall. See Help and Support for instructions on reinstalling traditional applications. From the Start screen, type `h`, and then select Help and Support.

**NOTE:** You may be prompted for your permission or password when using Refresh. See Help and Support for more information. From the Start screen, type `h`, and then select Help and Support.

To start Refresh:

1. From the Start screen, point to the upper-right or lower-right corner of the screen to reveal the charms.
2. Click Settings.
3. Click Change PC settings in the bottom-right corner of the screen, and then select General from the PC settings screen.
4. Scroll the right-side choices down to display Refresh your PC without affecting your files.
5. Under Refresh your PC without affecting your files, select Get started, and then follow the on-screen instructions.

Remove everything and reinstall Windows

Sometimes you want to perform detailed reformatting of your computer, or you want to remove personal information before you give away or recycle your computer. The process described in this section provides a speedy, simple way to return the computer to its original state. This option removes all personal data, apps, and settings from your computer, and reinstalls Windows.

**IMPORTANT:** This option does not provide backups of your information. Before using this option, back up any personal information you wish to retain.

You can initiate this option by using the f11 key or from the Start screen.

To use the f11 key:

1. Press f11 while the computer boots.
   - or -
   Press and hold f11 as you press the power button.
2. Choose your keyboard layout.
3. Select **Troubleshoot** from the boot options menu.

4. Select **Reset your PC**, and then follow the on-screen instructions.

To use the Start screen:

1. From the Start screen, point to the upper-right or lower-right corner of the screen to reveal the charms.

2. Click **Settings**.

3. Click **Change PC settings** in the bottom-right corner of the screen, and then select **General** from the PC settings screen.

4. Scroll the right-side choices down to display **Remove everything and reinstall Windows**.

**Recovering using HP Recovery Manager**

HP Recovery Manager software allows you to recover the computer to its original factory state. Using the HP Recovery media you created, you can choose from one of the following recovery options:

- **System Recovery**—Reinstalls the original operating system, and then configures the settings for the programs that were installed at the factory.

- **Minimized Image Recovery**—Reinstalls the operating system and all hardware-related drivers and software, but not other software applications.

- **Factory Reset**—Restores the computer to its original factory state by deleting all information from the hard drive and re-creating the partitions. Then it reinstalls the operating system and the software that was installed at the factory.

The HP Recovery partition (select models only) allows Minimized Image Recovery.

**What you need to know**

- HP Recovery Manager recovers only software that was installed at the factory. For software not provided with this computer, you must either download the software from the manufacturer’s website or reinstall the software from the media provided by the manufacturer.

- Recovery through HP Recovery Manager should be used as a final attempt to correct computer issues.

- HP Recovery media must be used if the computer hard drive fails.

- To use the Factory Reset or System Recovery options, you must use HP Recovery media.

**IMPORTANT:** HP Recovery Manager does not automatically provide backups of your personal data. Before beginning recovery, back up any personal data you wish to retain.
Using the HP Recovery partition to recover a minimized image (select models only)

The HP Recovery partition (select models only) allows you to perform a minimized image recovery without the need for recovery discs or a recovery USB flash drive. This type of recovery can only be used if the hard drive is still working.

To start HP Recovery Manager from the HP Recovery partition:

1. Press f11 while the computer boots.
   - or -
   Press and hold f11 as you press the power button.

2. Choose your keyboard layout.

3. Select Troubleshoot from the boot options menu.

4. Select HP Recovery Manager, and follow the on-screen instructions.

Using HP Recovery media to recover

You can use HP Recovery media to recover the original system. This method can be used if your system does not have an HP Recovery partition or if the hard drive is not working properly.

1. If possible, back up all personal files.

2. Insert the first HP Recovery disc you created into the optical drive on your computer or into an optional external optical drive, and then restart the computer.
   - or -
   Insert the HP Recovery USB flash drive you created into a USB port on your computer, and then restart the computer.

   **Note:** If the computer does not automatically restart in HP Recovery Manager, change the computer boot order. See Changing the computer boot order on page 70.

3. Follow the on-screen instructions.

Changing the computer boot order

If computer does not restart in HP Recovery Manager, you can change the computer boot order, which is the order of devices listed in BIOS where the computer looks for startup information. You can change the selection for an optical drive or a USB flash drive.

To change the boot order:

1. Insert the HP Recovery media you created.

2. Restart the computer, quickly press esc, and then press f9 for boot options.
3. Select the optical drive or USB flash drive you want to boot from.

4. Follow the on-screen instructions.

**Removing the HP Recovery partition**

HP Recovery Manager software allows you to remove the HP Recovery partition to free up hard drive space.

**IMPORTANT:** Removing the HP Recovery partition means you can no longer use Windows Refresh, the Windows Remove everything and reinstall Windows option, or the HP Recovery Manager option for minimized image recovery. Create HP Recovery media before removing the Recovery partition to ensure you have recovery options; see [Creating HP Recovery media on page 66](#).

Follow these steps to remove the HP Recovery partition:

1. From the Start screen, type `recovery`, and then select **HP Recovery Manager**.

2. Select **Remove Recovery Partition**, and then follow the on-screen instructions.
The wide-range input feature of the computer permits it to operate from any line voltage from 100 to 120 volts AC, or from 220 to 240 volts AC.

The 3-conductor power cord set included with the computer meets the requirements for use in the country or region where the equipment is purchased.

Power cord sets for use in other countries and regions must meet the requirements of the country or region where the computer is used.

Requirements for all countries

The following requirements are applicable to all countries and regions:

- The length of the power cord set must be at least 1.0 m (3.3 ft) and no more than 2.0 m (6.5 ft).
- All power cord sets must be approved by an acceptable accredited agency responsible for evaluation in the country or region where the power cord set will be used.
- The power cord sets must have a minimum current capacity of 10 amps and a nominal voltage rating of 125 or 250 V AC, as required by the power system of each country or region.
- The appliance coupler must meet the mechanical configuration of an EN 60 320/IEC 320 Standard Sheet C13 connector for mating with the appliance inlet on the back of the computer.

1. The flexible cord must be Type HO5VV-F, 3-conductor, 1.0-mm² conductor size. Power cord set fittings (appliance coupler and wall plug) must bear the certification mark of the agency responsible for evaluation in the country or region where it will be used.

2. The flexible cord must be Type SPT-3 or equivalent, No. 18 AWG, 3-conductor. The wall plug must be a two-pole grounding type with a NEMA 5-15P (15 A, 125 V) or NEMA 6-15P (15 A, 250 V) configuration.

3. The appliance coupler, flexible cord, and wall plug must bear a “T” mark and registration number in accordance with the Japanese Dentori Law. The flexible cord must be Type VCT or VCTF, 3-conductor, 1.00-mm² conductor size. The wall plug must be a two-pole grounding type with a Japanese Industrial Standard C8303 (7 A, 125 V) configuration.

4. The flexible cord must be Type RVV, 3-conductor, 0.75-mm² conductor size. Power cord set fittings (appliance coupler and wall plug) must bear the certification mark of the agency responsible for evaluation in the country or region where it will be used.

5. The flexible cord must be Type VCTF, 3-conductor, 0.75-mm² conductor size. Power cord set fittings (appliance coupler and wall plug) must bear the certification mark of the agency responsible for evaluation in the country or region where it will be used.
When a non-rechargeable or rechargeable battery has reached the end of its useful life, do not dispose of the battery in general household waste. Follow the local laws and regulations in your area for battery disposal.

HP encourages customers to recycle used electronic hardware, HP original print cartridges, and rechargeable batteries. For more information about recycling programs, see the HP Web site at http://www.hp.com/recycle.
