# 1. Introduction

This document explains how to install and use the Intel® Unite™ plugin for Protected Guest Access on the Intel Unite Solution.

### 1.1 Audience

This document is designed for use by IT professionals within a corporate environment responsible for installing the Intel Unite software and adding optional features to the application, such as enabling Guest Access for their business.

### **1.2 Overview**

The Intel Unite plugin for Protected Guest Access allows a Guest Client device to connect to a Hub without the need to be on the same Enterprise network. This is possible because the Hub can create an ad-hoc/hosted network (Access Point) where the Guest Client device can connect, download, or join the Intel Unite application for their client device.

### **1.3 Recommended Security Controls**

It is recommended that IT personnel follow the recommended security controls mentioned below:

- Turn off network bridging on the hub that is running Guest Access.
- In an Active Directory environment, set Group Policy Object on the hub which limits applications and users (GPO policies).
- Deploy a firewall between Guest Access machines and corporate connections in order to limit unauthorized traffic.
- Ensure there is a firewall on unused ports.
- Deploy software based solutions to prevent unauthorized executables from running on Guest Access machines like McAfee\* Application Control or Windows\* AppLocker.
  - Go to <u>http://www.mcafee.com/us/products/application-control.aspx</u> for more information on McAfee Application control.
  - Go to <u>https://technet.microsoft.com/itpro/windows/whats-new/whats-new/whats-new-windows-10-version-1507-and-1511</u> for more information on Windows AppLocker.

• Deploy hardware and software based solutions to prevent unauthorized executables from running on Guest Access machines like Device Guard on Windows\* 10 devices.

- Go to <u>https://technet.microsoft.com/en-us/itpro/windows/keep-secure/device-guard-deployment-guide</u> for more information on Device Guard.
- For additional information on how to disable network bridging:
  - Go to <u>https://technet.microsoft.com/en-</u> us/library/cc732103(v=ws.10).aspx

# 2. Plugin Installation and Components

### 2.1 Plugin Components

The following components are part of the Protected Guest Access plugin:

- Guest Access Client Plugin (dll)
  - This is the plugin that is loaded by the hub. It implements the functionality defined in the CFCPlugin.dll.
- Guest Access Service (Windows service)

• This is a windows service that is in charge of the creation and configuration of the ad-hoc/hosted network (access point), the GuestAccessClientPlugin.dll sends commands that are received and processed by this service.

- Client Download Page
  - Requires the Intel Unite app v3.0 for the client, configured to run and connect to the Hub that hosts the ad-hoc network. It is available for downloading once the network is created.

### 2.2 Plugin Installation

To install the Intel<sup>®</sup> Unite<sup>™</sup> plugin for Protected Guest Access you will need Administrator rights. You will also need to verify compatibility with your target version of your Intel Unite solution (Intel Unite software versions 1.0 and 2.0 will not be compatible with the latest released plugin versions).

<u>LAN cable required</u>: In addition to the minimum Hub requirements, the only supported network configuration is if the Hub is connected to the corporate network through a wired connection and the wireless network adapter is not connected to another access point.

Before you install the Protected Guest Access Plugin, ensure you have the latest Intel Wireless driver. If this is not the case you need to install it.

#### 2.2.1 Enterprise version

- 1. Run the Intel Unite Plugin for Protected Guest Access installer (Windows Installer Package).
- 2. Go to the plugins folder, located on Program Files(x86) \Intel\Intel Unite\Hub\Plugins, where the GuestAccessClient Plugin.dll has been installed.
- 3. The next step is to obtain the Certificate Hash value (key value) for the Guest Access Client Plugin. It is recommended to obtain and use key values for plugins vs the default value (default value = blank), as key values add security and prevent malicious plugins from being installed and run on Hubs.

**NOTE:** For a test environment, you could use the default key value, but this is not recommended for a production environment.

#### Obtaining the Certificate Hash Value

- 1. In the Intel Unite\Hub\Plugins folder, right click on GuestAccessClientPlugin.dll and choose Properties.
- 2. When the plugin **Properties** window opens, open the **Digital Signatures** tab.

- 4. Select Intel Unite Plugin and click on Details.
- 5. On the **Digital Signatures Details** window, click on **View Certificate.**

- 6. In the **Certificate** window, select the **Details** tab and scroll down until you see **Thumbprint**.
- 7. Select **Thumbprint.** Once the value is displayed, copy and paste it into a notepad or a text file, remove the spaces and save it.

| Certificate  | × |   |

8. This information will be used when you create the Profile for your plugin on the Admin Web Portal. The key value can also be created and entered after the profile has been created.

#### Creating the Profile on the Admin Web Portal

1. Go to the Admin Web Portal, under Groups, select Profiles.

| Devices | Groups <del>-</del>    | Management 👻 |
|---------|------------------------|--------------|
|         | Device Gro<br>Profiles | ups          |

2. Create a Key for the Guest Access Plugin Certificate Hash by clicking on **Create**, and when the **Profile Properties** window opens, enter the following:

| y and value news an |                                 |      |
|---------------------|---------------------------------|------|
| Key                 | NCERTIFICATEHASH_GuestAcces     | el × |
| Data Type           | Text                            | ¥    |
| Value               | 1215e4d3e87ebe08f49a98e87c9b63e | eb9c |

• Key: PluginCertificateHash\_GuestAccessPlugin

(The format is PluginCertificateHash\_XXXX, where X is the name you are giving the plugin)

- Data Type: Text
- Value: Paste the value saved in the notepad or text file mentioned in section Obtaining the Certificate Hash Value (Thumbprint value). This data can also be entered after creating the key.
- 3. Click on **Create** to save the profile.
- 4. In the **Profile Details** window, you will see the new Profile for the plugin and the key value entered.

| PLUGINCERTIFICATEHASH Guest Access Plugin | PLUGINCERTIFICATEHASH_GuestAccessPlugin | 178154E2f6e4d3e87ebe08f49a9{ |
|---|---|------------------------------|
|   |   |                              |

5. You must also ensure the **Verify Plugin Certificate Hash** key in the **Profile Details** window is enabled (green). If it is not enabled, turn it on by switching from red to green.

| Verify Plugin Certificate Hash |  |
|--------------------------------|--|
|--------------------------------|--|

**NOTE:** For a test environment, you could disable the certificate check (not recommended for a production environment).

#### **Registry Keys for the Protected Guest Access Plugin**

Data defined in the Registry Keys:

- a. HKEY\_CURRENT\_USER\software\Intel\Unite\GuestAccess\SSID
- b. HKEY\_CURRENT\_USER\software\Intel\Unite\GuestAccess\PSK

**IMPORTANT:** If a password is specified, the password must be at least 8 characters; if less than 8 characters Guest Access may not start.

c. HKEY\_CURRENT\_USER\software\Intel\Unite\GuestAccess\Download

#### 2.2.2 Standalone version

In the Standalone version, you will need to close the Intel Unite application running on the Hub and open the Intel Unite application **Settings** by clicking on the desktop launcher or from the start menu.

| 1. | On the | Settings | window, | go to | the | Plugins | tab. |
|----|--------|----------|---------|-------|-----|---------|------|
|----|--------|----------|---------|-------|-----|---------|------|

|--|-------------------------------------|--------------------------|
|  |                                     |                          |
| General User Interface Plugins                                     | Miscellaneous                       |                          |
| Phagin Straiga<br>Verdy Centificates on Phagins<br>Trunted Phagins | ¥ Ves ⊃ No<br>⊠ Guest Access Plugin |                          |
| Previous Newt  | Rosert Class Sava                   |                          |
|  |                                     |                          |
|  |                                     |                          |
|  |                                     | (intel) UNITE<br>3:54 PM |

- 2. Select Yes on **Verify Certificates on Plugins**. This setting will ensure only trusted plugins are loaded.
  - Set this to **Yes** if only digitally signed plugins that you trust should be loaded. **No** will allow any installed plugin to be loaded.
- 3. On **Trusted Plugins**, check the Guest Access Plugin box to enable it and click on **Save**. This option will be displayed only if **Verify Certificates on Plugins** is set to **Yes**. If the Trusted Plugin list is empty, it is because there are no digitally signed plugins installed.

## 3. Protected Guest Access Plugin Flow

Intel<sup>®</sup> Unite<sup>™</sup> Solution – Plugin Guide for Protected Guest Access v1.9

Page 11 of 17

# 4. How to enable Guest Access with your Client device

The user will require a client machine locally connected to the Hub (in-room participant) using the PIN displayed on the monitor or display where the Guest Access Client will be able to connect.

On the Client machine allowing Guest Access:

- 1. Connect to the Intel Unite application using the PIN shown on the Hub.
- 2. Once connected, click on the **Guest Access** icon displayed on the window.

3. The **Guest Access** window will be displayed. You can now click on **Start Guest Access** to enable local Wi-Fi access for the guest to join.

- 4. The Hub -this is your monitor or display in the room- will show:
  - Guest Access SSID "unique network name"
  - Password to use
  - Guest Access Download link

On the Client machine connecting through Guest Access (Session Guest):

1. Connect to the **Guest Access SSID** and enter the **Password** shown on the Hub.

2. In your browser, go to the **Guest Access Download** link shown on the monitor. Use the displayed format http://<hostIP>/guest.

3. The following Web page will be displayed:

| Bave the Intel <sup>®</sup> Unite <sup>™</sup> application v3.0 installed?<br>Guest Join  |  |
|---|--|
| Don't have the Intel® Unite™ application v3.0? Get it here:   |  |
| Having trouble or don't have administrator rights on your machine?<br>Use the one time Guest Access version*<br><sup>Intot al features may be available in single use version.</sup><br>Windows <sup>®</sup>  |  |
| Guest Access requires the Intel® Unite® client v3.0 or later. If you don't have the client you can download above.<br>Installation of the Intel® Unite® client requires administrator permissions on your system and may require a reboot.<br>CopyrigH© 2016 Intel® Corporation - All Rights Reserved |  |

- 4. Select according to the following 3 options:
  - Do you have the Intel Unite application v3.0 installed?
    - Use this option when your client machine has the Intel Unite application already installed, just click on **Guest Join** to connect (requires v3.0)

#### • Don't have the Intel Unite application v3.0? Get it here:

• Use this option when your client machine does not have the Intel Unite app installed. Click on **Windows\*** or **OS X\*** according to your OS and download the app to connect.

#### • Having trouble or don't have administrator rights on your machine? Use the one time Guest Access version

• Use this option if you do not have the Intel Unite application on your machine and/or if you had trouble downloading the application (previous 2 options) or do not have administrator rights to download and install the app. You can use the one time Guest Access version. With this option the Intel Unite app will be opened for a one time use and will not reside on your client machine. This option is only available for **Windows\*** OS.

5. Download and run the installer according to your selection.

6. After finishing the installation the Client machine will display the **Connect to** window, the guest will be able to enter the PIN and connect to the session.

7. On the Guest Access window, you will be able to see guests that are connected to the session when the **Show info** icon is displayed. When clicking on the **Show info** icon, the monitor (Hub) will display a toast message with the Guest Access information used by guests.

8. When all users are disconnected from the session the client devices using Guest Access will be disconnected. The Hub (your monitor or display) will show for a few seconds a toast message indicating no users are connected through Guest Access.

## **Appendix A. Firewall exceptions**

Please verify and validate that the Intel Unite application and the GuestAccessService is added to the Allowed Apps list in your Firewall settings.

The following boxes need to be checked as shown in the example below.

- 1. Internet Information Service (IIS)
- 2. Manager and World Wide Web (HTTP)
- 3. GuestAccessService

|               | Allow   | ed apps                         |              |                       |                       |      | -                   |        |

## **Appendix B. Troubleshooting**

You can also consult the Windows\* event log for additional information.

#### Guest Access is not starting (or not showing up)

- Verify that Certificate hashes preventing the plugin to work are not entered in the admin portal.
- Your organization GPO Policies (Group Policy Object) might not allow virtual hosted networks, please consult with your system Administrator.
- Ensure the Plugin Certificate Hash key value for Protected Guest Access has been entered on the Admin Web Portal (Enterprise version).
- Ensure the Plugin Certificate Hash has been enabled on the Admin Web Portal.
- Ensure the hub is connected to the corporate network through a wired connection.
- When in Standalone version, verify that you have enabled the plugin in the Settings Plugin Tab- section by clicking on the checkbox "Trusted Plugins".
- If the password value was changed in the Registry Keys HKCU/software/intel/unite/guestaccess/PSK (you are not using the default value), ensure it contains at least 8 characters.
- Ensure you have the latest Intel Wireless driver.
