IMPORTANT! This document is intended for HP authorized service providers only.
Product notice

This guide describes features that are common to most models. Some features may not be available on your computer.

This computer may require upgraded and/or separately purchased hardware and/or a DVD drive to install the Windows 7 software and take full advantage of Windows 7 functionality. See http://windows.microsoft.com/en-us/windows7/get-know-windows-7 for details.

Software terms

By installing, copying, downloading, or otherwise using any software product preinstalled on this computer, you agree to be bound by the terms of the HP End User License Agreement (EULA). If you do not accept these license terms, your sole remedy is to return the entire unused product (hardware and software) within 14 days for a full refund subject to the refund policy of your seller.

For any further information or to request a full refund of the price of the computer, please contact your seller.
Important Notice about Customer Self-Repair Parts

⚠️ **CAUTION:** Your computer includes Customer Self-Repair parts and parts that should only be accessed by an authorized service provider. See Chapter 5, "Removal and replacement procedures for Customer Self-Repair parts," for details. Accessing parts described in Chapter 6, "Removal and replacement procedures for authorized service provider parts," can damage the computer or void your warranty.
Important Notice about Customer Self-Repair Parts
Safety warning notice

⚠️ WARNING! To reduce the possibility of heat-related injuries or of overheating the device, do not place the device directly on your lap or obstruct the device air vents. Use the device only on a hard, flat surface. Do not allow another hard surface, such as an adjoining optional printer, or a soft surface, such as pillows or rugs or clothing, to block airflow. Also, do not allow the AC adapter to contact the skin or a soft surface, such as pillows or rugs or clothing, during operation. The device and the AC adapter comply with the user-accessible surface temperature limits defined by the International Standard for Safety of Information Technology Equipment (IEC 60950-1).

</table>
| **Processors** | 8th generation Intel® Core® processors:  
- i5-8250U, 8 GB and 16 GB with fan/heatsink  
- i5-8350U, 8 GB and 16 GB with fan/heatsink  
- i7-8550U, 8 GB and 16 GB with fan/heatsink  
- i7-8600U, 8 GB and 16 GB with fan/heatsink |
| **Chipset**   | Intel Premium Chipset  
Integrated with processor |
| **Graphics**  | Intel UMA Graphics with shared video memory  
Intel HD Graphics 620 |
| **Panels**    | 33.78-cm (13.3-in) LED backlight  
Full high-definition (FHD), ultra-wide viewing angle (UWVA), (1920 x 1080) eDP 1.3, UltraSlim, touch display, 400 nits  
FHD, UWVA (1920 x 1080), eDP 1.3, UltraSlim, touch display, 700 nits, touch display, privacy  
Ultra-HD (UHD), (3840 x 2160), eDP 1.3, UltraSlim, UWVA, touch display, 500 nits, touch display |
| **Memory**    | On-board (soldered) memory  
LPDDR3, 2133 MHz, dual channel support  
Supports up to 16GB of system RAM |
| **Primary storage** | Supports M.2 SSD SS 2280  
Supports the following M.2 SSDs:  
- 128 GB M2 SATA-3  
- 256 GB PCIe NVMe SS Value  
- 256 GB SATA-3 SED OPAL2 TLC  
- 256 GB PCIe Gen 3x4 NVMe SS TLC  
- 512 GB PCIe Gen 3 x 4 NVMe SS TLC  
- 512 GB PCIe Gen 3 x 4 NVMe SS TLC Opal 2  
- 1 TB PCIe Gen 3 x 4 NVMe SS TLC  
- 2 TB PCIe Gen 3 x 4 NVMe SS TLC |
| **Audio and video** | Two stereo speakers  
HD Bang & Olufsen audio  
IR and RGB camera (1080 p), supports IR “Hello” facial recognition with Windows 10. (supports wide dynamic range) |

**Power requirements**

- **AC adapter:**
  - 65-W AC adapter non-PFC USB-C

- **Power cords:**
  - Duck head power cord – length: 3.29 ft (1.0 m)

**Battery:**

- 4-cell, 56.20 Whr, 7.30 Ahr long life polymer battery

**Security**

- Security lock
- Touch fingerprint reader
- Supports Trusted Platform Module (TPM) 2.0 (Infineon, soldered down)
- Full volume encryption
- Preboot authentication (password)
- Power-on authentication (password)

**Operating system**

- **Preinstalled:**
  - Windows 10 Home 64 Chinese Market CPPP Plus
  - Windows 10 Home 64 Plus
  - Windows 10 Home 64 Plus Single Language
  - Windows 10 Professional 64
  - Windows 10 Professional 64 StF MSNA Plus (For use with i7 processor and more than 4 GB RAM only)

- **Restore media–DR-DVD:**
  - Windows 10 (available with any Windows 10 operating system)
  - Windows 10 DRUSB (for service only)

- **Certified:**
  - Microsoft WHQL: Windows 10 64

- **Web-only support:**
  - Windows 10 Enterprise 64
  - Windows 10 Enterprise 64 LTSB 1709

**Serviceability**

- End user replaceable parts:
  - AC adapter
## 2 External component identification

### Right

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Volume button</td>
<td>Controls speaker volume on the computer.</td>
</tr>
</tbody>
</table>
| (2) Battery light | When AC power is connected:  
  - White: The battery charge is greater than 90 percent.  
  - Amber: The battery charge is from 0 to 90 percent.  
  - Off: The battery is not charging.  
When AC power is disconnected (battery not charging):  
  - Blinking amber: The battery has reached a low battery level. When the battery has reached a critical battery level, the battery light begins blinking rapidly.  
  - Off: The battery is not charging. |
| (3) USB Type-C power connector and Thunderbolt ports with HP Sleep and Charge (2) | Connect an AC adapter that has a USB Type-C connector, supplying power to the computer and, if needed, charging the computer battery.  
  - and –  
Connect and charge most USB devices that have a Type-C connector, such as a cell phone, camera, activity tracker, or smartwatch, and provides high-speed data transfer.  
  - and –  
Connect a display device that has a USB Type-C connector, providing DisplayPort output.  
  
**NOTE:** Your computer may also support a Thunderbolt docking station.  
  
**NOTE:** Cables and/or adapters (purchased separately) may be required. |
<p>| (4) Security cable slot | Attaches an optional security cable to the computer. |</p>
<table>
<thead>
<tr>
<th>Component</th>

</thead>
<tbody>
<tr>
<td><strong>NOTE:</strong></td>
<td>The security cable is designed to act as a deterrent, but it may not prevent the computer from being mishandled or stolen.</td>
</tr>
<tr>
<td><strong>5</strong></td>
<td>HDMI port</td>
</tr>
<tr>
<td><strong>(5)</strong></td>
<td>Connects an optional video or audio device, such as a high-definition television, any compatible digital or audio component, or a high-speed High Definition Multimedia Interface (HDMI) device.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1</strong></td>
<td>USB SuperSpeed port with HP Sleep and Charge</td>
</tr>
<tr>
<td><strong>(1)</strong></td>
<td>Connects a USB device, provides high-speed data transfer, and even when the computer is off, charges most products such as a cell phone, camera, activity tracker, or smartwatch.</td>
</tr>
<tr>
<td><strong>2</strong></td>
<td>Audio-out (headphone)/Audio-in (microphone) combo jack</td>
</tr>
<tr>
<td><strong>(2)</strong></td>
<td>Connects optional powered stereo speakers, headphones, earbuds, a headset, or a television audio cable. Also connects an optional headset microphone. This jack does not support optional standalone microphones.</td>
</tr>
<tr>
<td><strong>WARNING!</strong></td>
<td>To reduce the risk of personal injury, adjust the volume before putting on headphones, earbuds, or a headset. For additional safety information, refer to the Regulatory, Safety, and Environmental Notices.</td>
</tr>
<tr>
<td><strong>To access this guide:</strong></td>
<td>▲ Select the Start button, select HP Help and Support, and then select HP Documentation.</td>
</tr>
<tr>
<td></td>
<td>‒ or ‒</td>
</tr>
<tr>
<td></td>
<td>▲ Select the Start button, select HP, and then select HP Documentation.</td>
</tr>
<tr>
<td><strong>NOTE:</strong></td>
<td>When a device is connected to the jack, the computer speakers are disabled.</td>
</tr>
<tr>
<td><strong>3</strong></td>
<td>Power button</td>
</tr>
<tr>
<td><strong>(3)</strong></td>
<td>• When the computer is off, press the button to turn on the computer.</td>
</tr>
<tr>
<td></td>
<td>• When the computer is on, press the button briefly to initiate Sleep.</td>
</tr>
<tr>
<td></td>
<td>• When the computer is in the Sleep state, press the button briefly to exit Sleep.</td>
</tr>
<tr>
<td></td>
<td>• When the computer is in Hibernation, press the button briefly to exit Hibernation.</td>
</tr>
</tbody>
</table>
CAUTION: Pressing and holding down the power button results in the loss of unsaved information.

If the computer has stopped responding and shutdown procedures are ineffective, press and hold the power button for at least 5 seconds to turn off the computer.

To learn more about your power settings, see your power options.

▲ Right-click the Power meter icon and then select Power Options.

(4) Power light
- On: The computer is on.
- Blinking: The computer is in the Sleep state, a power-saving state. The computer shuts off power to the display and other unneeded components.
- Off: The computer is off or in Hibernation. Hibernation is a power-saving state that uses the least amount of power.

(5) Nano SIM card slot
Supports a wireless subscriber identity module (SIM) card.

</tbody>
</table>
### Special keys

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) esc key</td>
<td>Displays system information when pressed in combination with the fn key.</td>
</tr>
<tr>
<td>(2) fn key</td>
<td>Executes frequently used system functions when pressed in combination with another key. Such key combinations are called hot keys. See Hot keys (select products only) on page 14.</td>
</tr>
<tr>
<td>(3) Windows key</td>
<td>Opens the Start menu.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> Pressing the Windows key again will close the Start menu.</td>
</tr>
<tr>
<td>(4) Action keys</td>
<td>Execute frequently used system functions.</td>
</tr>
<tr>
<td></td>
<td>See Action keys on page 12.</td>
</tr>
<tr>
<td>(5) Embedded numeric keypad</td>
<td>A numeric keypad superimposed over the keyboard alphabet keys. When fn + num lk is pressed, the keypad can be used like an external numeric keypad. Each key on the keypad performs the function indicated by the icon in the upper-right corner of the key. <strong>NOTE:</strong> If the keypad function is active when the computer is turned off, that function is reinstated when the computer is turned back on.</td>
</tr>
<tr>
<td>(6) num lk key</td>
<td>Turns the embedded numeric keypad on and off.</td>
</tr>
</tbody>
</table>
Action keys

An action key performs the function indicated by the icon on the key. To determine which keys are on your product, see Special keys on page 11.

▲ To use an action key, press and hold the key.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
</table>
| ![icon](image) | Helps prevent side-angle viewing from onlookers. If needed, decrease or increase brightness for well-lit or darker environments. Press the key again to turn off the privacy screen.  
**NOTE:** To quickly turn on the highest privacy setting, press fn+p. |
| ![icon](image) | Decreases the screen brightness incrementally as long as you hold down the key. |
| ![icon](image) | Increases the screen brightness incrementally as long as you hold down the key. |
| ![icon](image) | Turns the keyboard backlight off or on.  
**NOTE:** To conserve battery power, turn off this feature. |
<p>| <img src="image" alt="icon" /> | Plays the previous track of an audio CD or the previous section of a DVD or a Blu-ray Disc (BD). |
| <img src="image" alt="icon" /> | Starts, pauses, or resumes playback of an audio CD, a DVD, or a BD. |
| <img src="image" alt="icon" /> | Plays the next track of an audio CD or the next section of a DVD or a BD. |
| <img src="image" alt="icon" /> | Stops audio or video playback of a CD, a DVD, or a BD. |
| <img src="image" alt="icon" /> | Decreases speaker volume incrementally while you hold down the key. |
| <img src="image" alt="icon" /> | Increases speaker volume incrementally while you hold down the key. |
| <img src="image" alt="icon" /> | Mutes the microphone. |
| <img src="image" alt="icon" /> | Mutes or restores speaker sound. |</p>
<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
</table>
| ![Icon](image1) | Turns the wireless feature on or off.  
**NOTE:** A wireless network must be set up before a wireless connection is possible. |
| ![Icon](image2) | Turns the TouchPad and TouchPad light on and off. |
| ![Icon](image3) | Switches the screen image among display devices connected to the system. For example, if a monitor is connected to the computer, repeatedly pressing the key alternates the screen image from computer display to monitor display to simultaneous display on both the computer and the monitor. |
| ![Icon](image4) | Initiates Sleep, which saves your information in system memory. The display and other system components turn off and power is conserved. To exit Sleep, briefly press the power button.  
**CAUTION:** To reduce the risk of information loss, save your work before initiating Sleep. |
| ![Icon](image5) | Provides quick access to your Skype for Business calendar.  
**NOTE:** This feature requires Skype® for Business or Lync® 2013 running on Microsoft Exchange or Office 365® servers. |
| ![Icon](image6) | Turns the screen sharing function on or off.  
**NOTE:** This feature requires Skype for Business or Lync 2013 running on Microsoft Exchange or Office 365 servers. |
| ![Icon](image7) | • Answers a call.  
• Starts a call during a 1-on-1 chat.  
• Places a call on hold.  
**NOTE:** This feature requires Skype for Business or Lync 2013 running on Microsoft Exchange or Office 365 servers. |
| ![Icon](image8) | • Ends a call.  
• Declines incoming calls.  
• Ends screen sharing.  
**NOTE:** This feature requires Skype for Business or Lync 2013 running on Microsoft Exchange or Office 365 servers. |

**NOTE:** The action key feature is enabled at the factory. You can disable this feature by pressing and holding the fn key and the left shift key. The fn lock light will turn on. After you have disabled the action key feature, you can still perform each function by pressing the fn key in combination with the appropriate action key.
Hot keys (select products only)

A hot key is the combination of the fn key and another key.

To use a hot key:

▲ Press the fn key, and then press one of the keys listed in the following table.

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>Turns on the insert function.</td>
</tr>
<tr>
<td>W</td>
<td>Pauses the operation.</td>
</tr>
</tbody>
</table>

Bottom

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Vents</td>
<td>Enable airflow to cool internal components.</td>
</tr>
</tbody>
</table>

**NOTE:** The computer fan starts up automatically to cool internal components and prevent overheating. It is normal for the internal fan to cycle on and off during routine operation.

(2) Speakers | Produce sound. |
Labels

The labels affixed to the computer provide information you may need when you troubleshoot system problems or travel internationally with the computer. Labels may be in paper form or imprinted on the product.

**IMPORTANT:** Check the following locations for the labels described in this section: the bottom of the computer, inside the battery bay, under the service door, on the back of the display, or on the bottom of a tablet kickstand.

- **Service label**—Provides important information to identify your computer. When contacting support, you may be asked for the serial number, the product number, or the model number. Locate this information before you contact support.

Your service label will resemble one of the examples shown below. Refer to the illustration that most closely matches the service label on your computer.

![Service label diagram]

<table>
<thead>
<tr>
<th>Component</th>

<tr>
<td>(3) Product ID</td>
<td></td>
</tr>
<tr>
<td>(4) Serial number</td>
<td></td>
</tr>
<tr>
<td>(5) Warranty period</td>
<td></td>
</tr>
</tbody>
</table>

- **Regulatory label(s)**—Provide(s) regulatory information about the computer.

- **Wireless certification label(s)**—Provide(s) information about optional wireless devices and the approval markings for the countries or regions in which the devices have been approved for use.
3 Illustrated parts catalog

Computer major components

NOTE: HP continually improves and changes product parts. For complete and current information on supported parts for your computer, go to http://partsurfer.hp.com, select your country or region, and then follow the on-screen instructions.

NOTE: Details about your computer, including model, serial number, product key, and length of warranty, are on the service tag at the bottom of your computer. See Labels on page 15 for details.

Tools required

You will need the following tools to complete the removal and replacement procedures:

- Flat-bladed screwdriver
- Magnetic screwdriver
- Phillips P0 and P1 screwdrivers
- Torx T8 screw driver

Service considerations

The following sections include some of the considerations that you must keep in mind during disassembly and assembly procedures.

**NOTE:** As you remove each subassembly from the computer, place the subassembly (and all accompanying screws) away from the work area to prevent damage.

Plastic parts

**CAUTION:** Using excessive force during disassembly and reassembly can damage plastic parts. Use care when handling the plastic.

Cables and connectors

**CAUTION:** When servicing the computer, be sure that cables are placed in their proper locations during the reassembly process. Improper cable placement can damage the computer.

Cables must be handled with extreme care to avoid damage. Apply only the tension required to unseat or seat the cables during removal and insertion. Handle cables by the connector whenever possible. In all cases, avoid bending, twisting, or tearing cables. Be sure that cables are routed in such a way that they cannot be caught or snagged by parts being removed or replaced. Handle flex cables with extreme care; these cables tear easily.
Drive handling

⚠️ CAUTION: Drives are fragile components that must be handled with care. To prevent damage to the computer, damage to a drive, or loss of information, observe these precautions:

- Before removing or inserting a hard drive, shut down the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
- Before handling a drive, be sure that you are discharged of static electricity. While handling a drive, avoid touching the connector.
- Before removing an optical drive, be sure that a disc is not in the drive and be sure that the optical drive tray is closed.
- Handle drives on surfaces covered with at least one inch of shock-proof foam.
- Avoid dropping drives from any height onto any surface.
- After removing a hard drive or an optical drive, place it in a static-proof bag.
- Avoid exposing an internal hard drive to products that have magnetic fields, such as monitors or speakers.
- Avoid exposing a drive to temperature extremes or liquids.
- If a drive must be mailed, place the drive in a bubble pack mailer or other suitable form of protective packaging and label the package “FRAGILE.”

Electrostatic discharge damage

Electronic components are sensitive to electrostatic discharge (ESD). Circuitry design and structure determine the degree of sensitivity. Networks built into many integrated circuits provide some protection, but in many cases, ESD contains enough power to alter device parameters or melt silicon junctions.

- A discharge of static electricity from a finger or other conductor can destroy static-sensitive devices or microcircuitry. Even if the spark is neither felt nor heard, damage may have occurred.
- An electronic device exposed to ESD may not be affected at all and can work perfectly throughout a normal cycle. Or the device may function normally for a while, then degrade in the internal layers, reducing its life expectancy.

⚠️ CAUTION: To prevent damage to the tablet when you are removing or installing internal components, observe these precautions:

- Keep components in their electrostatic-safe containers until you are ready to install them.
- Before touching an electronic component, discharge static electricity by using the guidelines described in this section.
- Avoid touching pins, leads, and circuitry. Handle electronic components as little as possible.
- If you remove a component, place it in an electrostatic-safe container.

The following table shows how humidity affects the electrostatic voltage levels generated by different activities.

⚠️ CAUTION: A product can be degraded by as little as 700 V.

Packaging and transporting guidelines

Follow these grounding guidelines when packaging and transporting equipment:

- To avoid hand contact, transport products in static-safe tubes, bags, or boxes.
- Protect ESD-sensitive parts and assemblies with conductive or approved containers or packaging.
- Keep ESD-sensitive parts in their containers until the parts arrive at static-free workstations.
- Place items on a grounded surface before removing items from their containers.
- Always be properly grounded when touching a component or assembly.
- Store reusable ESD-sensitive parts from assemblies in protective packaging or nonconductive foam.
- Use transporters and conveyors made of antistatic belts and roller bushings. Be sure that mechanized equipment used for moving materials is wired to ground and that proper materials are selected to avoid static charging. When grounding is not possible, use an ionizer to dissipate electric charges.

Workstation guidelines

Follow these grounding workstation guidelines:

- Cover the workstation with approved static-shielding material.
- Use a wrist strap connected to a properly grounded work surface and use properly grounded tools and equipment.
- Use conductive field service tools, such as cutters, screw drivers, and vacuums.
- When fixtures must directly contact dissipative surfaces, use fixtures made only of static-safe materials.
- Keep the work area free of nonconductive materials, such as ordinary plastic assembly aids and Styrofoam.
- Handle ESD-sensitive components, parts, and assemblies by the case or PCM laminate. Handle these items only at static-free workstations.
- Avoid contact with pins, leads, or circuitry.
- Turn off power and input signals before inserting or removing connectors or test equipment.
Equipment guidelines

Grounding equipment must include either a wrist strap or a foot strap at a grounded workstation.

- When seated, wear a wrist strap connected to a grounded system. Wrist straps are flexible straps with a minimum of one megohm ± 10% resistance in the ground cords. To provide proper ground, wear a strap snugly against the skin at all times. On grounded mats with banana-plug connectors, use alligator clips to connect a wrist strap.

- When standing, use foot straps and a grounded floor mat. Foot straps (heel, toe, or boot straps) can be used at standing workstations and are compatible with most types of shoes or boots. On conductive floors or dissipative floor mats, use foot straps on both feet with a minimum of one megohm resistance between the operator and ground. To be effective, the conductive must be worn in contact with the skin.

The following grounding equipment is recommended to prevent electrostatic damage:

- Antistatic tape
- Antistatic smocks, aprons, and sleeve protectors
- Conductive bins and other assembly or soldering aids
- Nonconductive foam
- Conductive tabletop workstations with ground cords of one megohm resistance
- Static-dissipative tables or floor mats with hard ties to the ground
- Field service kits
- Static awareness labels
- Material-handling packages
- Nonconductive plastic bags, tubes, or boxes
- Metal tote boxes
- Electrostatic voltage levels and protective materials

The following table lists the shielding protection provided by antistatic bags and floor mats.

<table>
<thead>
<tr>

5 Removal and replacement procedures for authorized service provider parts

CAUTION: Components described in this chapter should be accessed only by an authorized service provider. Accessing these parts can damage the computer or void the warranty.

CAUTION: This computer does not have user-replaceable parts. Only HP authorized service providers should perform the removal and replacement procedures described here. Accessing the internal part could damage the computer or void the warranty.

Component replacement procedures

NOTE: Details about your computer, including model, serial number, product key, and length of warranty, are on the service tag at the bottom of your computer. See for details.

NOTE: HP continually improves and changes product parts. For complete and current information on supported parts for your computer, go to http://partsurfer.hp.com, select your country or region, and then follow the on-screen instructions.

There are as many as xx screws that must be removed, replaced, and/or loosened when servicing the parts described in this chapter. Make special note of each screw size and location during removal and replacement.

Bottom cover

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bottom cover for use in all models</td>
<td>L31851-001</td>
</tr>
</tbody>
</table>

Before removing the bottom cover, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.

Remove the bottom cover:

1. Remove the four Torx T8M2.0×4.3 screws (1) and loosen the captive screw (2) that secures the bottom cover to the computer.
2. Remove the bottom cover (3).
Reverse the removal procedures to install the bottom cover.

**Battery**

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>4-cell, 49-Whr, 6.4-Ah, Li ion battery</td>
<td>915191-855</td>
</tr>
</tbody>
</table>

Before disassembling the computer, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.

2. Disconnect the power from the computer by unplugging the power cord from the computer.

3. Disconnect all external devices from the computer.

4. Remove the bottom cover (see [Bottom cover on page 26](#)).

Remove the battery:

1. Disconnect the battery cable from the system board (1).

2. Remove the four Phillips screws (2) that secure the battery to the computer.
3. Remove the Phillips broadhead screw, and lift the battery out of the computer (3).
### Solid State drive

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid State drive (SSD)</td>
<td></td>
</tr>
<tr>
<td>128 GB, M2 SATA-3 TLC</td>
<td>L31873-001</td>
</tr>
<tr>
<td>256 GB, PCIe NVMe TLC</td>
<td>L31875-001</td>
</tr>
<tr>
<td>256 GB, PCIe NVMe Value</td>
<td>L31881-001</td>
</tr>
<tr>
<td>256 GB, SED OPAL2 TLC</td>

</tr>
<tr>
<td>1 TB, PCIe NVMe TLC</td>
<td>L31874-001</td>
</tr>
<tr>
<td>2TB, PCIe NVMe TLC</td>
<td>L31877–001</td>
</tr>
</tbody>
</table>

Before removing the SSD, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the bottom cover (see [Bottom cover on page 26](#)).
5. Remove the battery. (see [Battery on page 27](#)).

Remove the SSD:

1. Remove the Mylar strip that covers the SSD.
2. Remove the Phillips PM2.0×1.8 screw (1) that secures the drive to the system board.

3. Remove the drive (2) by pulling it away from the connector.

**NOTE:** SSDs are designed with notches to prevent incorrect insertion.

Reverse this procedure to reassemble and install the SSD.
System board

**NOTE:** The system board spare part kit includes replacement thermal material.

All system boards use the following part numbers:

xxxxxxx-001: Windows 7 or non-Windows operating systems

xxxxxxx-601: Windows 8.1 or Windows 10 operating system

<table>

</tr>
</tbody>
</table>

Before removing the system board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the bottom cover (see Bottom cover on page 26).
5. Remove the battery (see Battery on page 27).
6. Remove the SSD (see Solid State drive on page 29).

Remove the system board:

1. Disconnect the following cables:
   (1): Audio
   (2): Power button
   (3): Speaker
   (4): Panel
   (5): TouchPad
   (6): Keyboard back light
   (7): NFC module
   (8): Keyboard
   (9): Fingerprint reader
2. Remove the SIM card insert (1), and then remove the 2 long screws (2).

3. Remove the HDMI module (3).

4. Remove the eight Phillips screws (4) that secure the system board to the computer.

5. Pull the system board up (5) and away from the computer (6), making sure the connectors on the side of the board are clear of the computer.

⚠️ **CAUTION:** To avoid damaging or breaking the system board, use two hands when removing the board. Do not lift up on the narrow end of the board.
Reverse this procedure to install the system board.
Display assembly

This section describes removing components that require you to completely remove the display panel. Individual components are not spared for the display assembly.

Before removing the display assembly, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the bottom cover (see Bottom cover on page 26).

Remove the display assembly:

1. Open the computer completely and fold the display under the base enclosure.
2. Remove the six Phillips screws (1) that secure the left and right brackets, and open the display slightly.
3. Slide the display slightly toward the front (2) to disengage the display from the computer and remove the display (3).

Reverse this procedure to reinstall the display assembly.
Before removing the audio module, follow these steps:

1. Shut down the computer.
2. Disconnect all external devices connected to the computer.
3. Disconnect the power from the computer by first unplugging the power cord from the AC outlet and then unplugging the AC adapter from the computer.
4. Remove the battery (see Battery on page 27).

Remove the Audio jack board:

1. Disconnect the audio jack board cable from the system board (1).
2. Remove the Phillips screw (2), and then remove the audio jack board (3).

Reverse this procedure to install the audio jack board.
Power module

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power module</td>
<td>L31857-001</td>
</tr>
</tbody>
</table>

**IMPORTANT:** Make special note of each screw and screw lock size and location during removal and replacement.

Before removing the power module, follow these steps:

1. Shut down the computer.
2. Disconnect all external devices connected to the computer.
3. Disconnect the power from the computer by first unplugging the power cord from the AC outlet and then unplugging the AC adapter from the computer.
4. Remove the battery (see Battery on page 27).

Remove the Power module:

1. Disconnect the Power module (1).
2. Remove the two Phillips screws (2), and then remove the Power module.

Reverse this procedure to install the power module.
Speaker assembly

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Speaker assembly contains four speakers, with foam/rubber tape</td>
<td>L31854-001</td>
</tr>
</tbody>
</table>

Before removing the speaker assembly, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the bottom cover (see Bottom cover on page 26).
5. Remove the battery (see Battery on page 27).

Remove the speaker assembly:

1. Disconnect the speaker cables from the system board (1).
2. Remove the six screws securing the speakers (2).
3. Remove the plastic tape holding the speaker cable (3), and then remove the wiring (4).
4. Remove the left and right speakers (5).

Reverse this procedure to install the speaker.
Fingerprint reader board

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fingerprint reader board (includes cable)</td>
<td>L31852-001</td>
</tr>
</tbody>
</table>

Before removing the fingerprint reader board, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the bottom cover (see Bottom cover on page 26).
5. Remove the battery (see Battery on page 27).

Remove the fingerprint reader board:

1. Disconnect the fingerprint reader board from the system board (1).
2. Remove the Phillips screw (2) that secures the assembly to the computer.
3. Lift the bracket up at the screw end and remove the fingerprint bracket (3).
4. Remove the fingerprint reader board and cable from the computer (4).

Reverse this procedure to install the fingerprint reader board.
## TouchPad

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>TouchPad</td>
<td>L31855-001</td>
</tr>
<tr>
<td>TouchPad with NFC module (includes antenna and tape)</td>
<td>L31856-001</td>
</tr>
</tbody>
</table>

Before removing the TouchPad, follow these steps:

1. Turn off the computer. If you are unsure whether the computer is off or in Hibernation, turn the computer on, and then shut it down through the operating system.
2. Disconnect the power from the computer by unplugging the power cord from the computer.
3. Disconnect all external devices from the computer.
4. Remove the bottom cover (see Bottom cover on page 26).
5. Remove the battery (see Battery on page 27).

Remove the TouchPad:

1. Disconnect the TouchPad cable (1) from the system board.
2. Remove the six Phillips screws (2) that secure the TouchPad to the computer, and then lift the TouchPad from the computer (3).

Reverse the removal procedures to install the TouchPad.
NFC board

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>NFC board</td>
<td>L31856-001</td>
</tr>
</tbody>
</table>

**NOTE:** The NFC board spare part kit does not include the NFC board cable. The NFC board cable is included in the Cable Kit, spare part number.

**IMPORTANT:** Make special note of each screw and screw lock size and location during removal and replacement.

Before removing the NFC board, follow these steps:

1. Shut down the computer.
2. Disconnect all external devices connected to the computer.
3. Disconnect the power from the computer by first unplugging the power cord from the AC outlet and then unplugging the AC adapter from the computer.
4. Disconnect all external devices from the computer.
5. Remove the bottom cover.
6. Remove the battery (see Battery on page 27).

Remove the NFC board:

1. Release the ZIF connector (1) to which the NFC board cable is attached, and then disconnect the NFC board cable from the card reader board.
2. Release the grounding tape (2) that secures the NFC board cable to the NFC board.
3. Release the ZIF connector (3) to which the NFC board cable is attached, and then disconnect the NFC board cable from the NFC board.
4. Detach the NFC board (4) from the keyboard/top cover. (The NFC board is attached to the keyboard/top cover with double-side adhesive.)

5. Remove the NFC board.

Reverse this procedure to install the NFC board.
WWAN module

<table>
<thead>
<tr>
<th>Description</th>
<th>Spare part number</th>
</tr>
</thead>
<tbody>
<tr>
<td>WWAN module</td>
<td></td>
</tr>
<tr>
<td>HP It4132 LTE/HSPA+ 4G with GPS M.2 WWAN module</td>
<td>L29292–800</td>
</tr>
</tbody>
</table>

⚠️ **CAUTION:** To prevent an unresponsive system, replace the wireless board only with a wireless board authorized for use in the computer by the governmental agency that regulates wireless devices in your country or region. If you replace the board and then receive a warning message, remove the board to restore device functionality, and then contact technical support.

⚠️ **IMPORTANT:** Make special note of each screw and screw lock size and location during removal and replacement.

Before removing the WWAN module, follow these steps:

1. Shut down the computer.
2. Disconnect all external devices connected to the computer.
3. Disconnect the power from the computer by first unplugging the power cord from the AC outlet and then unplugging the AC adapter from the computer.
4. Remove the battery (see [Battery on page 27](#)), and then remove the following components:

Remove the WWAN module:

⚠️ **NOTE:** In order to remove or replace the WWAN module, you may need to first remove the Mylar strip that may block access to the WWAN module.

1. Disconnect the WWAN antenna cables (1) from the terminals on the WWAN module.
NOTE: The #5/red WWAN antenna cable connects to the WWAN module #5/Main terminal. The #6/blue WWAN antenna cable connects to the WWAN module #6/Aux terminal.

2. Remove the Phillips PM2.0×2.4 screw (2) that secures the WWAN module to the system board. (The WWAN module tilts up.)

3. Remove the WWAN module (3) by pulling the board away from the slot at an angle.

NOTE: If the WWAN antenna is not connected to the terminal on the WWAN module, a protective sleeve must be installed on the antenna connector, as shown in the following illustration.

Reverse this procedure to install the WWAN module.
This chapter is primarily focused on troubleshooting HP Mobile Workstations and HP Notebooks. The information is provided so that you can solve problems yourself or at least narrow down what may be causing the problem. Based on some of the most common symptoms, this chapter helps to identify logical steps and available resources or tools for resolving an issue. HP recommends that you follow the instructions carefully, observe safety precautions, and note any observations or results. Capturing this information may help identify and resolve the problem faster.

⚠️ WARNING! To reduce the risk of electric shock or damage to the equipment:
- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) outlet that is easily accessible at all times.
- Disconnect power from the equipment by unplugging the power cord from the AC outlet.
- Before disassembling notebooks, always disconnect power and remove the battery.

⚠️ CAUTION: Static electricity can damage the electronic components of the computer. To prevent damage to the computer, carefully observe the electrostatic discharge precautions.
- Discharge static electricity by briefly touching a grounded metal object before you begin.
- Work on a static-free mat.
- Wear a static strap to ensure that any accumulated electrostatic charge is discharged from your body to the ground.
- Create a common ground for the equipment you are working on by connecting the static-free mat, static strap, and peripheral units to that piece of equipment.
- Refer to the Electrostatic Discharge Section of the Maintenance & Service Guide for more information.

⚠️ CAUTION: The computer includes customer self-repair parts and parts that should only be accessed by an authorized service provider. See the chapter titled "Removal and replacement procedures for Customer Self-Repair parts," for details. Accessing parts described in the chapter titled "Removal and replacement procedures for authorized service provider only parts" can damage the computer or void the computer warranty.
## Resources

</tr>
</tbody>
</table>

### General troubleshooting steps

A basic logic should be used when troubleshooting computer issues. This section will help you become familiar with troubleshooting methodology and efficiently resolve problems. Proceed through the steps in the following table until the issue is resolved, and then move on to the next step that is relevant to the issue. For example, if you resolve a memory issue using the HP PC Diagnostics (UEFI) tool in step 6, you can then move on to step 10 to reseat the memory into its memory slot.

**NOTE:** General troubleshooting steps do not have to be followed in a specific order if an issue does not apply.

#### Table 6-1  Troubleshooting methodology and general troubleshooting steps

</tbody>
</table>
Identify the issue

1. Understand the issue

It is important to understand the issue that occurred, including related symptoms. It helps to understand the basic computer boot-up sequence as well as the failure itself. The boot-up sequence and associated failures are described below.

Boot up sequence

The computer performs several steps after you press the power button or restart the computer.

It is important to understand where in the boot-up sequence the symptoms occur. The following table lists the phases of the boot-up sequence and explains the symptoms that may occur in each phase. For example, a blue screen error (BSOD) often occurs during the performance phase.

Table 6-2 Boot-up sequence

<table>
<thead>
<tr>
<th>Item</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power-on</td>
<td>After power button is pressed, the computer boots after all internal power rails (i.e., 5V, 3.3V) are stable. Confirm that power lights are on fan is spinning. Next step: If the computer experiences a power-on issue, see “Verify Power Good (Troubleshooting) lights” in No Power on page 63. Common issues: all lights are off; troubleshooting lights are on; does not boot; video is absent.</td>
</tr>
<tr>
<td>POST (UEFI/BIOS)</td>
<td>Power-On Self-Test (POST) verifies that hardware components (processor, hard drive, memory, etc.) are functional. When POST is complete, the HP logo displays briefly and then disappears. If there are errors, the computer may exhibit blinking lights and POST error messages. Common issues: lights blink, error message appears, hangs.</td>
</tr>
<tr>
<td>Performance (operating system)</td>
<td>System boots to operating system, and Windows logo screen appears. Common issues: hangs (lock up/freezes), blue screen, video distorted, driver conflict, slow performance, display issue (dead pixel), I/O issue (no speaker sound), wireless/audio unavailable, noise. See Analyze the issue on page 49 table below for detailed troubleshooting information.</td>
</tr>
</tbody>
</table>

Failure classification

Failure classification is a breakdown of different types of failures and symptoms that could occur during the boot-up sequence. Table 3 and table 4 represent the failure classification for common notebook failures.

Table 3 categorizes failures by the boot-up sequence.

1. Power-on: Common issues are No Power, Recycle/Reboot, etc.
2. POST: Common issues are No Boot (have power), Light Flash or Diagnostics Error.
3. Performance: Common issues are Intermittent Loss of Power, Blue Screen, Hang, etc. In many cases, issues may be identified and associated with a particular hardware (i.e., display, storage).

Table 4 categorizes failures by hardware.

4. Display
5. I/O devices (Input/Output)
6. Storage
7. Mechanical

A single symptom can be listed under different groups. For example, No Video can belong to (1) Power-on or (4) Display; but Flickering when powered should be listed in (4) Display. Or, in another example, a blue screen can be caused by a driver conflict in Performance (4), but it can also be caused by a defective hard drive under (6) Storage. Therefore, failures that share similar symptoms are noted.

If possible, make a record of the failure symptom, the phase of the boot-up sequence where the failure occurs, and the most likely location in the failure tree (Table 6-3 Failure classification by boot-up sequence on page 47 and Table 6-4 Failure classification by hardware devices and mechanical on page 48). This will help isolate the issue and indicate the next steps. For example, when the computer is running the operating system, it may experience an issue with (4) Display, (5) I/O devices (keyboard, wireless, and so on), (6) Storage, or (7) Mechanical components (stuck buttons, thermal shutdown, and so on).

**NOTE:** "Uncategorized" is used if an issue found is not listed. For example, Bluetooth is offered on certain hardware configurations; therefore, a Bluetooth issue can be classified under "I/O Device" if needed.

## 2. Examine the environment

It is important to examine the computer’s environment. If you can quickly identify the cause of the issue, fewer resolution steps may be needed. Perform the following environment inspections:

- Check all cables and connections to be sure that there are no loose connections.
- Confirm that power sources are good, such as wall power type/adapter (110V/220V ac), power strip. Test with a verified working AC outlet.
- Check for compatibility issues between the computer and third-party devices, peripherals, noncertified devices, incompatible hardware (i.e., Mac OS device). Incompatibility can result in blue screen errors, improper operation, and so on.
- Isolate the computer from sources of electromagnetic interference (EMI), such as cell phones, 2-way radios, floor mats, fans (and other electronic motors). EMI may contribute to a display freeze issue or lock-up.
3. Perform a visual inspection of hardware

It is important to do a visual inspection of the hardware itself. Perform physical inspection of the computer:

- Look for abnormalities such as a cracked display, dented battery, broken latches for battery bay, keyboard key caps popped out, dust over connectors, liquid spill over keyboard, etc.
- Look for signs of drop, movement, or vibration that may cause internal and external loose connections.

4. Update BIOS and drivers

**IMPORTANT:** Whenever possible, update to the latest BIOS, firmware, and drivers before troubleshooting.

Note that some customer company policies prohibit updates. Check your company policy before taking action.

The updates may include fixes for your computer issues, and they may also enhance system performance. HP continually improves the update process to make it easier. The BIOS update can be done locally through a manual process, through an automatic installation, or through a remote installation on multiple units.

**Manually updating BIOS and drivers**

- See the Computer Setup chapters to manually update BIOS and drivers.
- Refer to specific BIOS update installation instructions that accompany the download.

**Remotely deploying BIOS and drivers**

Instead of manually searching for and downloading each SoftPaq, users and IT personnel can use two tools to identify and download all appropriate SoftPaqs for the selected HP models.

- HP SoftPaq Download Manager (SDM) is a software tool designed to streamline the download, extraction, and installation process of SoftPaqs, including BIOS and drivers.
- HP System Software Manager (SSM) is a software tool designed to simplify the deployment of SoftPaqs to HP computers.

Analyze the issue

5. Remove or uninstall recently added hardware, software

HP has designed this computer and validated it using a full-range hardware and software qualification matrix. If an issue appears to have started recently, it may be related to the recent addition of hardware or software. A good method to determine the root cause is to remove recently added components or uninstall applications one at a time and restart the computer when necessary.

**IMPORTANT:** After you have completed the process of uninstalling hardware or software and are ready to reinstall, when installing a new device be sure that it is seated properly and all cables are correctly connected. After installing the device, restart the computer and make sure the new device is powered on. In addition, if the new device is a root cause of a problem, it could cause a conflict in drivers or incompatibility issues with other programs installed. For any new hardware you have added, be sure to install the latest drivers available from the device vendor website.
6. HP Hardware Diagnostics and Tools

HP offers different diagnostics and tools to diagnose hardware failure. This section describes how to use some of these tools. Make sure to check for the latest versions before use.

HP PC Hardware Diagnostics (UEFI)

HP PC Hardware Diagnostics is a Unified Extensible Firmware Interface (UEFI) that allows you to run diagnostic tests to determine whether the computer hardware is functioning properly. The HP PC Hardware Diagnostics (UEFI) tool is built within BIOS (basic memory and hard drive diagnostics only), or within new hard drives themselves. These drives contain more advanced versions of the diagnostic tool than the BIOS-based version.

The tool runs outside the operating system so that it can isolate hardware failures from issues that are caused by the operating system or other software components. In reality, many problems can be determined using this tool if the issue is a defective part or a loose connection (i.e., reseating keyboard cable after the tool reports a keyboard error).

The tool has three major functions:

- **System Tests** – Check the computer’s hardware to assure everything is functioning properly. If your system won’t boot into Windows, try the Quick System Test. For more comprehensive testing, use the Extensive System Test option. If the System Test did not detect a hardware problem, continue with the Component Tests.
- **Component Tests** – Focus on selected hardware components in your computer.
- **Firmware Management** – Update your computer’s BIOS to the latest version (available separately) or roll back to a previous version.

To start HP PC Hardware Diagnostics (UEFI):

1. Turn on or restart the computer, quickly press the `esc` button on the computer, and then press `F2`. The BIOS searches three places for the diagnostic tools, in the following order:
   a. Connected USB drive
   b. Hard drive
   c. BIOS
2. When the diagnostic tool opens, use the keyboard arrow keys to select the type of diagnostic test you want to run, and then follow the on-screen instructions.

Screen shot appearance may vary.

**NOTE:** Users should utilize this tool, especially when the computer cannot boot to Windows.

**NOTE:** If a component fails a test, write down the information so it is available when contacting support. The information is also available in Test Logs on the Main Menu.

For more information, see the chapter titled "Using HP PC Hardware Diagnostics (UEFI)."
HP Support Assistant (HPSA)

HP Support Assistant (HPSA) helps you maintain peak performance and resolve problems through automatic updates, built-in diagnostics, and a variety of assistance options. HPSA is preinstalled on every new HP PC with Windows 7, Windows 8, or Windows 10. HP is continually improving this tool. Please verify the latest version is installed to receive the most benefit. For more information, see [http://www.hp.com/go/hpsupportassistant](http://www.hp.com/go/hpsupportassistant).

**NOTE:** HPSA can be used only if the computer boots into Windows. If the computer does not boot into Windows, use HP PC Hardware Diagnostics (UEFI) instead.

HPSA also integrates diagnostics and tools that help resolve issues. See example screen shots as follows.

![Example Screen Shots](image-url)
HP BIOS Configuration Utility (BCU)

HP BCU is a free utility that captures the BIOS settings and their values. This tool provides a text file of the computer’s BIOS configuration. This can help identify any settings that may be contributing to an issue.

In some cases, it may help to compare this BIOS text file to the default settings of the computer.

**NOTE:** HP recommends that you reset BIOS before trying BCU. Resetting the BIOS is always available and relatively quick to try, whereas BCU takes extra time and effort.

HP Image Diagnostic Tool

Available to HP Authorized Support Partners (ASPs) and users from the [ftp://ftp.hp.com/pub/idr/ImageDiags/](ftp://ftp.hp.com/pub/idr/ImageDiags/), this tool collects information about the current state of the computer, including product serial number, platform and BIOS information, and information about user-installed software and hardware components. HP encourages you to review the report before sending it to support. The report may assist you with diagnostics and solutions to problems you encounter.

**NOTE:** Available only to authorized service providers/technicians.

HP Thermal Monitor

Available only for HP internal use, HP Thermal Monitor can be used to stress the processor and GPU and monitor the temperature values of various components in the system. The components that are currently monitored include the processor, GPU, ACPI thermal zones, hard drive, and battery. The tool reads the temperatures of the components, logs the data, and helps to determine whether the computer would overheat in the event of thermal shutdown, fan spinning loud, etc.

Non HP diagnostics tools

*Windows-to-Go USB*

Windows-To-Go USB is a Microsoft-based tool for Enterprise editions of Windows that can help in troubleshooting. You can find a process online about how to create a live Windows USB drive. For more information, see [https://technet.microsoft.com/en-us/library/hh831833.aspx](https://technet.microsoft.com/en-us/library/hh831833.aspx).

*Intel Processor Diagnostic Tool*

Determine what processor is in your computer and verify the processor operating frequency. The tool also tests specific processor features and performs a stress test on the processor. For more information, see [http://www.intel.com/supportprocessors/sb/CS-031726.htm?id=subhdr+tools_procdiagtool](http://www.intel.com/supportprocessors/sb/CS-031726.htm?id=subhdr+tools_procdiagtool).
7. Status lights, blinking light codes, troubleshooting lights, and POST error messages

Carefully observe any behavior the computer may be exhibiting: status lights, blinking lights, and POST error messages during boot. It is important to understand what these indicators mean.

**Status lights**

See the chapter titled “External Component Identification” for light locations. The following table describes basic lights on the computer.

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power button</td>
<td>When the computer is off, press the button to turn on the computer.</td>
</tr>
<tr>
<td></td>
<td>When the computer is on, press the button briefly to initiate Sleep (Windows) or Suspend (Linux).</td>
</tr>
<tr>
<td></td>
<td>When the computer is in the Sleep state, press the button briefly to exit Sleep (Windows) or Suspend (Linux).</td>
</tr>
<tr>
<td></td>
<td>When the computer is in Hibernation, press the button briefly to exit Hibernation.</td>
</tr>
<tr>
<td><strong>CAUTION:</strong> Pressing and holding down the power button results in the loss of unsaved information.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>If the computer has stopped responding and operating system shutdown procedures are ineffective, press and hold the power button.</td>
</tr>
<tr>
<td>Front power light</td>
<td>On: The computer is on.</td>
</tr>
<tr>
<td></td>
<td>Blinking: The computer is in the Sleep state.</td>
</tr>
<tr>
<td></td>
<td>Off: The computer is off.</td>
</tr>
<tr>
<td>Front AC adapter and battery light</td>
<td>White: The computer is connected to external power and the battery is charged from 90 to 99 percent.</td>
</tr>
<tr>
<td></td>
<td>Amber: The computer is connected to external power and the battery is charged from 0 to 90 percent.</td>
</tr>
<tr>
<td></td>
<td>Blinking amber: A battery that is the only available power source has reached a low battery level. When the battery reaches a critical battery level, the battery light begins blinking rapidly. By default, the critical battery level is defined in Power Options as 5%.</td>
</tr>
<tr>
<td></td>
<td>Off: The battery is fully charged.</td>
</tr>
<tr>
<td>Front hard drive light</td>
<td>Blinking white: The hard drive is being accessed.</td>
</tr>
<tr>
<td></td>
<td>Amber: HP 3D DriveGuard has temporarily parked the hard drive.</td>
</tr>
<tr>
<td>Rear AC adapter light</td>
<td>White: The computer is connected to external power.</td>
</tr>
<tr>
<td></td>
<td>Off: The computer is not connected to external power.</td>
</tr>
</tbody>
</table>
**Blinking light codes**

During startup, the computer may not boot properly. If this occurs, blinking light codes that will help identify what is causing the issue. The computer uses the blinking lights below to identify a hardware component that reports an error during startup. For more information, see Blinking lights and boot error codes on page 105.

<table>
<thead>
<tr>
<th>Blink codes</th>
<th>Error</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amber battery light: blinks 1 Hz continuously</td>
<td>Embedded controller unable to load firmware</td>
</tr>
<tr>
<td>Caps/num lock lights = 1 blink</td>
<td>Processor not executing code</td>
</tr>
<tr>
<td>Caps/num lock lights = 2 blinks</td>
<td>BIOS recovery code unable to find valid BIOS recovery image</td>
</tr>
<tr>
<td>Caps/num lock lights = 3 blinks</td>
<td>Memory module error</td>
</tr>
<tr>
<td>Caps/num lock lights = 4 blinks</td>
<td>Graphics controller error</td>
</tr>
<tr>
<td>Caps/num lock lights = 5 blinks</td>
<td>System board error</td>
</tr>
<tr>
<td>Caps/num lock lights = 6 blinks</td>
<td>Intel Trusted Execution Technology (TXT) Error</td>
</tr>
<tr>
<td>Caps/num lock lights = 7 blinks</td>
<td>Sure Start unable to find valid BIOS Boot Block image</td>
</tr>
<tr>
<td>Caps/num lock lights = 8 blinks</td>
<td>Sure Start has identified a problem (Manual Recovery Policy Set)</td>
</tr>
</tbody>
</table>

**POST error messages**

The Power-On Self-Test (POST) is a series of diagnostic tests that runs automatically when the computer is powered on. If the POST encounters a problem, visual error messages are displayed before the operating system starts. POST checks the following items to ensure that the computer system is functioning properly:

- Memory
- Processors
- BIOS
- Mass storage devices
- Fans

The following table describes errors encountered during HP PC Hardware Diagnostics (UEFI).

<table>
<thead>
<tr>
<th>Test description</th>
<th>Failure description</th>
<th>Error code</th>
<th>Suggested user actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Startup Test</td>
<td>Memory module</td>
<td>200</td>
<td>Attempt to reseat the memory module and then repeat the test. For details on troubleshooting issues related to the memory module, search for support documentation at <a href="http://www.hp.com/support">http://www.hp.com/support</a>.</td>
</tr>
<tr>
<td>Startup Test</td>
<td>Hard Disk 1 SMART</td>
<td>301</td>
<td>Attempt to reseat the hard drive and repeat the test. The hard drive may have failed.</td>
</tr>
<tr>
<td>Boot Device Manager</td>
<td>Boot device not found</td>
<td>3F0</td>
<td>Reset BIOS. Then reseat the hard drive and repeat the test.</td>
</tr>
<tr>
<td>BIOS Recovery</td>
<td>BIOS Recovery Occurred</td>
<td>500</td>
<td>This message indicates that BIOS recovery was completed successfully. No further action is required.</td>
</tr>
</tbody>
</table>
Table 6-6  System diagnostics failure codes and user actions (continued)

<table>
<thead>
<tr>
<th>Test description</th>
<th>Failure description</th>
<th>Error code</th>
<th>Suggested user actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOS Application</td>
<td>BIOS Application Error</td>
<td>501</td>
<td>The BIOS installation may have become corrupted. Download the latest version of the BIOS and install it. If reinstalling the BIOS fails, contact support for further assistance.</td>
</tr>
<tr>
<td>CMOS Recovery</td>
<td>CMOS Recovery Occurred</td>
<td>502</td>
<td>This message indicates that CMOS recovery was completed successfully. No further action is required.</td>
</tr>
<tr>
<td>Battery Check</td>
<td>Primary Battery Replace</td>
<td>601</td>
<td>This message indicates that the primary battery has very low capacity. Search for support documentation at <a href="http://www.hp.com/support">http://www.hp.com/support</a> for details on using the HP Support Assistant to verify the battery capacity and, if necessary, order a replacement.</td>
</tr>
<tr>
<td>Wireless Modules</td>
<td>Not installed or responding</td>
<td>701</td>
<td>Reseat the wireless adapter module and antennas. Because seating or reseating a wireless LAN adapter is unique to each computer model, see the WLAN module removal section in the removal and replacement chapter for further details. Contact support if third-party wireless adapters are installed in the computer.</td>
</tr>
<tr>
<td>Fan</td>
<td>Fan not operating correctly</td>
<td>90B</td>
<td>The system fan may be malfunctioning. Replace the fan.</td>
</tr>
</tbody>
</table>

Power Good (Troubleshooting) lights

HP has added troubleshooting power lights to ZBook G3 Mobile Workstations (Studio, ZBook 15, and ZBook 17) to help troubleshoot power-on issues. The lights indicate when the system board power rails are unstable and/or the system needs a hardware reset.

Example

![Troubleshooting LEDs diagram](image)

These lights should be visible after removing the service door or bottom cover. Consult with support for platform-specific locations of the lights.

- Example: System board is good. Lights that turn on briefly (< 1 second) and immediately turn off indicate normal function. In this case, system (3.3V), power good (3.3V), and system reset (3.3V) are all good and troubleshooting lights should not be lit. However, other external lights should be lit as normal afterward.
Example: System board needs replacement. When (1) system 3.3V exists, but one power rail is bad then (2) power good is low (0V), and troubleshooting lights will turn on.

After you press the system power button, troubleshooting lights will turn on for 5 seconds and turn off. The system external lights will not light up. Follow general troubleshooting steps (i.e., remove recently added hardware, test with minimum configuration, etc.) prior to replacing the system board.

Resolve the issue

8. Hard reset

A hard reset (or forced reset) erases all information in the computer's memory and may restore functionality. Resetting the computer forces the system to clear and reestablish the connections between the BIOS and the hardware. For more information, see http://support.hp.com/us-en/document/c01684768.

Performing a hard reset might fix the following common conditions:

- Windows stops responding.
- Computer stops before Windows loads, indicated by incomplete boot-up, blinking cursor on a black background, and errors relating to operating system not found or a missing drive.
- Display suddenly goes blank and stays blank.
- Software freezes.
- Keyboard stops responding.
- The computer does not exit Sleep or Suspend state.
- An external device stops responding. Turn off the power to that device in addition to performing the steps in this document.

Before performing a hard reset, you must disconnect or remove all peripheral devices. You should start and test the computer by itself, and if the problem is not resolved, reconnect one peripheral device at a time. To resolve the startup or operational problem, run HP Support Assistant, or manually install all updated drivers from Microsoft and HP.

Before beginning, turn the computer over and look for a battery compartment door (service door). For 2015 platforms, the battery is considered removable but not accessible. See the battery section for how to remove/unplug the battery.

To perform a hard reset on a computer with a sealed or non removable battery, use the following steps:

1. Turn off the computer.
2. Remove the computer from any port replicator or docking station.
3. Disconnect all external connected peripheral devices such as USB storage devices, external displays, and printers.
4. Unplug the AC adapter from the computer.

5. Disconnect the battery.

6. Press and hold the power button for at least 15 seconds to drain residual power.

7. Reconnect the battery and plug the AC adapter back into the computer, but do not connect any of the peripheral devices.

8. Press the power button to turn on the computer.

9. If a startup menu appears, use the arrow keys to select Start Windows Normally, and then press the Enter key.

10. After reconnecting each of the peripheral devices, run Windows Update and HP Support Assistant to update all device drivers.

**Clear CMOS**

CMOS refers to the battery-powered, semiconductor chip located on computer’s system board. Notebooks store low-level settings like the system time and hardware settings in CMOS. Sometimes it is necessary to clear CMOS, which requires removing and reinserting the 3V RTC battery for a short period of time (a few minutes before reinserting), in addition to removing the AC adapter and battery.

**NOTE:** Clearing the CMOS should only be performed for troubleshooting purposes. There is no reason to clear CMOS if the computer is working properly.

The notebook service door must be removed to access the CMOS battery. If the computer has a replaceable RTC battery, see the RTC battery replacement section for the battery removal/replacement.

**9. Soft reset (Default Settings)**

**NOTE:** Some company policies prohibit updates or changes. Check whether the computer has custom BIOS settings before taking action.

If your computer is having issues booting, has errors during boot, is running into issues after adding hardware, or you are having other abnormal system behaviors that cannot be resolved through any other methods (i.e., hard reset), it may be necessary to reset the system BIOS to default settings.

To load BIOS to default settings: Reboot the computer, and then press F10 > Main > Restore defaults. For more information, see the BIOS F10 Setup technical white paper at http://support.hp.com, enter your computer model, and then go to Manuals > White papers > HP PC BIOS F10 Setup Guide.

**10. Reseat cables and connections**

**NOTE:** Before disassembling the computer to reseat cables and connections, always disconnect power and remove the battery or disconnect a non removable battery.

Many problems are caused by improper connections or loose connections due to abnormal movement and vibration. See Cable management on page 116 and Connector types on page 117 for suggested cable management practices when removing and installing components.

You can access and reseat connections for Customer Self-Repair (CSR) parts (see the “Removal and replacement procedures for Customer Self-Repair parts” chapter for details). Examples of reseating hardware include:

- Reseating the battery into the battery bay can resolve no-battery found and no-charging issues.
- Reseating memory modules can resolve memory error, no-boot, and blue screen issues.
- Reseating the hard drive can resolve a POST error 3F0 (no boot device) issue (see POST Error Messages and User Actions on page 107).
● Reseating the keyboard cable can resolve an unrecognized keys error.

● Reseating the wireless module and antenna cable can resolve a wireless connection issue.

For field replaceable units (FRUs), authorized service providers can try the following steps (for more information, see the “Removal and replacement procedures for authorized service provider parts” chapter).

● Reseating the fan cable can fix POST error 90B (no fan detected) issue (see POST Error Messages and User Actions on page 107).

● Reseating the power cable can fix a no boot issue.

● Reseating the daughterboards (some models may have a power button board, VGA board, etc.) can resolve their functional issues.

● Reseating graphics cables and panel connectors can fix distorted/flickering video.

● Replacing thermal pads may resolve thermal power-down issue.

11. Test with minimum configuration

The factory-shipped computer (hardware configuration and preinstalled operating system image) is well tested and ready for use. Therefore, using the original factory hardware configuration and/or booting to operating system safe mode often resolves issues quickly.

● Disconnect any external USB storage, remove any discs in optical drives, remove the computer from a docking station, remove external video, etc.

● In addition to removing recently added components, the issue can be narrowed down further with a minimum configuration. For example, if HP PC Diagnostics reports a memory error, test one memory module at a time to isolate the defective module.

● If the computer does not successfully boot the operating system, booting to safe mode may help identify what may be causing the issue as described below.

**Essential hardware configuration**

⚠️ **NOTE:** This step is to be used by authorized service providers only. HP will not honor the warranty for a system tested with the system board removed without the heat sink, fan, etc.

If none of the steps above resolve the issue, start the computer with essential hardware only. The purpose is to remove as much as hardware as possible while still maintaining the computer’s ability to turn on.

This essential configuration is often used to troubleshoot power-on related issues, such as no-boot, reboot, and freezing issues.

The essential hardware consists of the following:

● System board

● AC adapter (unplug nonremovable battery or remove battery)

● Processor (and heat sink/fan). (Processor may be integrated into the system board.)

● Memory (one verified working memory DIMM)

● Graphics card (if no VGA port is available on the system board). Platform may have both Intel integrated graphics and discrete graphics. Therefore, discrete graphics card may not be needed.

● External VGA monitor
- External USB keyboard
- External mouse

NOTE: After the service door is removed, disconnect all connections (internal keyboard, display, discrete GPU, hard drive/solid-state drive, daughterboards, etc.) to achieve the essential hardware configuration above. DO NOT disassemble the system board from its enclosure at this time.

Reverse the procedure above by reinstalling each piece of hardware removed, one piece at a time, and testing your computer after each installation. Since your computer works with only the essential hardware installed, those parts must be working properly. This means that one of the hardware components removed is causing the computer to not work properly. By installing each device back into the computer and testing each time, the failing hardware will eventually be identified.

Safe mode

A driver conflict often results in a blue screen error message. Therefore, booting in safe mode can resolve many issues in Windows because safe mode forces the computer to load a limited version of Windows which only contains essential files. Safe mode is useful for troubleshooting problems with programs and drivers that might not start correctly or that might prevent Windows from starting correctly.

If a problem does not reappear when you start in safe mode, eliminate the default settings and basic device drivers as possible causes. Refer to the links below for how to start your computer in safe mode:

12. Test with verified working configuration (hardware and/or operating system)

One troubleshooting technique that can quickly isolate an issue is using a verified working part while testing. A good example is to use an external keyboard, mouse, or VGA monitor when you have issues with an internal keyboard, TouchPad, or display. Testing with a verified working AC adapter can identify an error caused by a faulty one. Similarly, testing with a verified working operating system can determine bad behaviors of the current operating system. See Non HP diagnostics tools on page 53 for instructions about obtaining and using a Windows-To-Go USB.

NOTE: In some situations, more than one item may contribute to a problem.

13. Replace the system board

The system board may be replaced only by authorized service providers. This should not be considered an initial step taken to resolve an issue. Review and perform all steps discussed previously before replacing the system board. 4. Update BIOS and drivers on page 49, 7. Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54, 8. Hard reset on page 57, and 9. Soft reset (Default Settings) on page 58, and/or 10. Reseat cables and connections on page 58 can resolve many system board issues without requiring the effort of replacing unnecessary hardware.

Review Table 6-1 Troubleshooting methodology and general troubleshooting steps on page 45 for appropriate troubleshooting steps.

IMPORTANT: System board failure is not common. Do not replace the system board until you have tried all other troubleshooting options.

NOTE: Determine whether a previous service case might be related to the current problem. For example, a fan detection issue may be caused by a loose connection resulting from previous service.

TIP: Without an RTC battery (3V coin-cell battery), the computer automatically reboots. This is a useful feature when the power connector cable (between external AC adapter and system board) is defective.
NOTE: Most of the time, effective troubleshooting can prevent a system board replacement.

Items that may prevent resolution of the issue:

- The information provided about the issue omits key details, including any actions taken before the issue occurred.
- BIOS, software, and drivers have not been updated.
- Cables or connections are loose.
- Technician is unaware of information available from the HP Support website (i.e., CA - Customer Advisory).
- The issue is related to existing or known issues that may be identified in existing support articles.
- Technician may have omitted steps in the provided repair instructions (e.g., Spare Part Replacement Instructions).
- Skipping one of steps from Troubleshooting Methodology table results in No Defect Found (NDF)/No Fault Found (NFF)/No Issue Detected (NID) messages.

Verify solution

- Verify that the implemented solution works. Reboot the system or device and try to complete the task that produced the issue.
- If a part has been replaced, verify other basic functions. For example, GPU replacement requires keyboard removal. Therefore, it is good practice to verify all basic components to be sure that the solution is complete.
- Explain to the customer why the issue occurred and what was done to resolve it. If the solution you used was in an HP Public document, provide the document information to the customer, letting them know it can be located on www.hp.com. Also, tell them that there are other solutions available on the website. Advise the customer to check the website first when they have an issue. It may save them time calling in.
- Document the correct issue. Update the case with as many details as possible for other agents and engineering to analyze and study for lessons learned.

Helpful Hints

After you become familiar with the general troubleshooting steps above (General troubleshooting steps on page 45), follow the helpful hints below before running diagnostics and troubleshooting.

At startup

**TIP:** If you have installed an operating system other than the factory-installed operating system, go to http://www.hp.com/go/quickspecs and verify that it is supported on your system.

1. Be sure that the computer is plugged into a working AC outlet.
2. Be sure that power is connected to the docking station if a dock is used.
3. Be sure that the AC adapter light is on.
4. Be sure that the AC adapter is connected when you update BIOS to avoid BIOS corruption.
5. Be sure that the computer is turned on, the rear power light is solid white (connected to an external power source) and the front power light is solid white (normal operation).
6. Remove all optical and flash drives from your system before turning it on.
7. Be sure that the boot option is set to a working operating system drive.
8. Be sure that externally connected monitors are turned on and their power lights are on. Not all monitors are equipped with lights to indicate their functionality.

9. Turn up the brightness and contrast controls of a display or external display device if the screen is dim.

**During operation**

1. To wake the computer:
   a. Press the power button or any key on the keyboard.
   b. If the system remains in the Sleep (Windows), Suspend (Linux), or Hibernate state, shut down the system by pressing and holding the power button for at least four seconds.
   c. If the system does not shut down, unplug the power cord, wait a few seconds, and then plug it in again. Then press the power button again to restart the system. If it does not turn on, press the power button to start the computer.

2. Look for blinking lights on the computer. The blinking lights could be error codes that will help diagnose the problem.

3. Check all cables for loose or incorrect connections (external devices, power cords, dock, etc.).

4. After installing a non-Plug and Play expansion board or other option, reconfigure the computer. For example, if you upgrade to a solid-state drive, you may need to reconfigure the boot order.

5. Be sure that all required device drivers have been installed. For example, if you have connected a printer, you must install a printer driver.

6. If there is a network connection issue, plug another computer with a different cable into the network connection. There might be a problem with the network plug or cable.

7. If hardware has recently been installed, remove it and determine whether the computer functions properly.

8. If software has recently been installed, uninstall it and determine whether the computer functions properly.

9. If the screen is blank, confirm the display choice by pressing Windows logo + P and set to screen only. Or plug an external monitor into a different video port on the computer if one is available and close the computer lid.

10. Verify that the latest version of BIOS, drivers, and software are installed. A new release might support new features or fix the problem.

11. Press the caps lock and/or num lock key. If the caps lock and/or num lock light toggles on or off, the keyboard is likely operating correctly.

12. Press the TouchPad On/Off button light. If the light toggles on or off, the TouchPad is likely operating correctly.

**Consulting with HP Service**

If further HP support is required, a lot of the following information may be requested when you call, so it may be helpful to take notes.

- Technical support registration number (if applicable)
- Product serial number
- Product model name and number
- Product identification number
Common issues and possible solutions

This section contains common issues, symptoms, and a series of tables that describe possible solutions to issues from Failure classification on page 46 tables. The following sections identify the issue with symptoms and solutions to resolve an issue.

Power-on issues

No Power

When a unit experiences no power there are several contributing factors to consider. Be sure to consider all symptoms related to this behavior in troubleshooting.

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Computer does not start</td>
<td>Failed power input to the computer (external power source, AC adapter, faulty battery).</td>
</tr>
<tr>
<td>Display is black or blank</td>
<td>Bad connection to the computer (bad power button, power connector).</td>
</tr>
<tr>
<td>No fan noise</td>
<td>Defective parts (memory, hard drive, graphics) or failed system board.</td>
</tr>
<tr>
<td>No hard drive spinning</td>
<td></td>
</tr>
<tr>
<td>Lights do not glow</td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps

Perform quick check

Remove all external devices, including docking station.

Verify external power source (7. Examine the environment on page 48).

Verify AC adapter

It is preferable to verify the battery before verifying the AC adapter. However, you can verify the AC adapter first, before opening the service door for a battery check.

- Verify AC adapter is compatible with product. Verify that the part number is for this computer if possible.
- Verify AC adapter and power cord are good (no physical damage, bent middle ID pin).
- Verify AC adapter works on a verified working computer.
- Plug in AC adapter and power on computer without battery.
- Inspect power port on computer side for any damage, dust, or debris.
- Check power light (7. Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54). Rear power light indicates external power to the computer is good.
## Verify battery condition/status

1. Check battery condition (overall result, cycle life, voltage, etc.) using HP PC Hardware Diagnostics (UEFI) or HPSA tools.
2. Verify that battery is installed properly in battery bay without a gap and that latch locks are tight (for models with removable batteries).
3. Check battery status light (7. Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54). Be sure that battery is not fully discharged, preventing system from booting.
4. Determine whether the computer can turn on with battery only.
5. Remove service door and test with a verified working battery. If the computer boots, inspect original battery before replacement.
6. Test battery with a verified working computer to verify that it is OK.
7. If there is still no boot, remove battery and boot on AC power only.

### The sections below are intended for authorized service providers/technicians.

#### Verify AC adapter – voltage

1. Measure DC voltage output that should be around 19.5 VDC and acceptable voltage range is from 18.5 – 20.5 VDC.
2. If the DC voltage is out of range, replace the AC adapter.

**NOTE:** This action requires a digital voltmeter.

**NOTE:** 2015 mWS does not have the power cable between system board and power connector on chassis.

#### Verify power button, power connector

1. Be sure that power button is not stuck.
2. Reseat power connector cable (if applicable).
3. Replace new power connector cable (if the cable exists and is defective)
4. To isolate faulty power connector cable and power button, technicians can short power-on pads/pins to power up the computer. Contact HP Engineering for this information.

#### Verify blinking lights (7. Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54)

At this point, there should be sufficient power from the AC adapter to the system board. Expect to hear the fan spinning and see blinking lights or error messages (i.e., faulty memory, HDD, etc)

#### Verify Power Good (Troubleshooting) lights

1. Verify if the system board has power-on issue related. If there is no power-on issue, move to next steps. For more information, see Power Good (Troubleshooting) lights on page 56.
2. Verify all connections and reseat parts (10. Reseat cables and connections on page 59).

#### Verify system board

1. Test essential hardware configuration (11. Test with minimum configuration on page 53, 12. Test with verified working configuration (hardware and/or operating system) on page 60, 13. Replace the system board on page 60) by removing nonessential parts.
## Items

### Procedures

1. Follow actions in [No Power on page 63](#).
   - a. Be sure that AC adapter has correct DC voltage.
   - b. Verify battery - test with a confirmed working battery.
   - c. Verify that power button is not stuck.
   - d. Verify that power connector is not loose.
   - e. Verify that Power Good LEDs are solid.
   - f. Remedy loose connections and reseat major components (processor, memory, GPU, hard drive/solid-state drive, etc).

2. Perform visual check for loose connections, bent pins, stray wires, dust, nearly faulty parts (bulging/leaking capacitor).

3. Test [essential hardware configuration](#) (11. Test with minimum configuration on page 59)
   - a. If system boots, reinstall nonessential hardware one component at a time to isolate issue.
   - b. If system does not boot, replace essential hardware with verified working parts, one component at a time. If system still does not boot, replace system board.

The sections below are intended for authorized service providers/technicians.

---

### Intermittent power-on, shutdown, reboot

#### Items

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Possible causes</th>
<th>Possible causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does not always turn on</td>
<td>Electrical short, fluctuating power source, unstable power rails, loose connections, bent pins, stray wires, dust, obvious damage, nearly faulty parts (bulging/leaking capacitor).</td>
<td></td>
</tr>
<tr>
<td>Intermittently hangs</td>
<td>Potentially will turn into a no power issue soon (<a href="#">No Power on page 63</a>).</td>
<td></td>
</tr>
<tr>
<td>Intermittently shuts down</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Spontaneously reboots</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### Troubleshooting steps

1. Visually check power ports on both AC adapter and computer sides.
2. Inspect power sources:
   - a. Verify AC adapter working correctly. Use a confirmed working adapter to test.
   - b. Verify that battery is not depleted while system is in Sleep state. Test with a confirmed working battery.

---

### Tips and tricks

Computer automatically boots without pressing power button when RTC 3V battery has been removed. Therefore, after the service door and RTC 3V battery are removed, no need to press power button from top side.

In essential hardware configuration, mWS G1 and G2 may require discrete GPU to boot. However, mWS G3 can boot with integrated graphics.
AC adapter issue

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Possible causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>No sign of power</td>
<td>AC adapter and others (i.e., external power source)</td>
</tr>
<tr>
<td>No boot</td>
<td></td>
</tr>
<tr>
<td>No rear power light</td>
<td></td>
</tr>
<tr>
<td>No front power light</td>
<td></td>
</tr>
<tr>
<td>Battery does not charge when AC adapter is connected</td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps

Quick check

1. Verify external power source ([Examine the environment on page 49](#)).
2. Remove all external devices, including docking station.
3. Perform a hard reset for the computer ([Hard reset on page 57](#)).
4. Disconnect and reassemble the power cord and adapter in case the adapter experienced short circuit, over current, over temperature events.
5. Use a verified working adapter. If the computer operates normally, there is a problem with the original adapter.
6. Verify that the AC adapter works on a verified working computer. If the computer operates normally, there is no problem with the adapter. See [HP Smart Adapter warning message on page 80](#) for further information.

Verify AC adapter

1. Remove working battery.
2. Verify that AC adapter is compatible with product. Verify that part number is for this computer if possible.
3. Inspect AC adapter and power cord for physical damage, bent middle ID pin.
4. Plug in AC adapter and power the computer without battery.
5. Inspect the power port on computer side for any damage, dust, debris.
6. Check power light ([Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54](#)). Rear power light indicates that external power to the computer is good.
7. If there is still no rear power light or no boot, replace the AC adapter.

Tips and tricks

The HP Smart AC adapter has a special pin in the middle, called the ID pin, for power rating and throttling purpose. If this pin is broken, the rear power light will be on but the power button and front power lights will blink continuously and the computer will not turn on. Third party AC adapter will not work on the computer.

Use the AC adapter that came with the computer for better performance.

Battery not recognized, not charging

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>No battery status light</td>
<td>Defective AC adapter and/or battery.</td>
</tr>
<tr>
<td>Blinking amber (critically low battery level)</td>
<td><strong>NOTE:</strong> Before proceeding, verify that the computer can boot to BIOS or Windows with a good AC adapter.</td>
</tr>
<tr>
<td>No boot without AC adapter</td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps
<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Visual inspections</strong></td>
<td>1. Inspect battery connectors for any signs of damage.</td>
</tr>
<tr>
<td></td>
<td>2. Verify that battery is installed properly in battery bay without gap or obstructions and latch locks are tight. Reseat battery (for models with removable batteries).</td>
</tr>
<tr>
<td></td>
<td>3. Determine whether battery gets hot (batteries heat up when charging, but not too hot to touch).</td>
</tr>
<tr>
<td><strong>Check battery warranty</strong></td>
<td>To see whether the battery is new or its warranty is expired. Battery capacity degrades over time.</td>
</tr>
</tbody>
</table>
| **Verify front battery status light** | 1. Battery status light is off: battery not recognized.  
                              2. Battery status light is blinking amber: critically low battery level.               |
| **Reset**             | 1. Hard reset ([8. Hard reset on page 57](#))                                                                                              |
|                       | 2. Soft reset ([9. Soft reset (Default Settings) on page 58](#))                                                                            |
| **Verify AC adapter**  | 1. Determine whether the computer needs the AC adapter to boot and operate. Sometimes, intermittently bad AC adapter and loose connection between adapter and computer results in inability to charge battery which causes short run time. |
|                       | 2. Inspect AC adapter to verify that it is functioning.                                                                                     |
|                       | 3. Test with a working AC adapter and confirm whether battery is charging.                                                                |
|                       | 4. Be sure that battery is fully charged (AC adapter plugged in at least 2.5 hours).                                                        |
| **Diagnostics**       | HP tools will report results such as passed, calibrate, weak, replace, no battery and unknown, and suggest corresponding actions.       |
| **Use HP Hardware Diagnostics (UEFI)** ([6. HP Hardware Diagnostics and Tools on page 50](#)) | ● HP PC Hardware Diagnostics (UEFI) is a good tool to use to isolate and determine faulty battery, especially for quickly discharging (short life) battery. |
| **Use HP Support Assistant tools in Windows** ([HP Support Assistant (HPSA) on page 52](#)) | 1. Verify that battery is recognized and charging.                                                                                 |
|                       | 2. Verify battery condition if battery cycle life is over specs (i.e., long life of 1000-cycle life and 3-year warranty). Battery may have premature capacity loss within its cycle life or warranty. |
|                       | 3. If issue remains, test with a verified working battery and verify battery status lights and battery conditions.                         |
|                       | 4. If issue remains, replace system board.                                                                                                 |
|                       | 5. Verify the new replacement.                                                                                                             |
### Battery discharges too fast

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Battery has good status light but discharges too fast</td>
<td>AC adapter and/or battery.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

**Verify AC adapter**

Determine whether the computer needs the AC adapter to boot and operate. Sometimes, intermittently bad AC adapter and loose connection between adapter and computer results in inability to charge battery and causes short run time.

1. Inspect AC adapter to verify that it is working.
2. Test with AC adapter alone and with a verified working AC adapter.

**Verify battery:** Battery capacity can degrade over time, so check the warranty coverage. Run a battery test to confirm if issue is hardware-related.

1. Review battery power plans in Control Panel > Power Options that may consume more energy and discharge battery faster. Resetting default to Power Saver option can conserve battery power.
2. Determine whether any graphics processing is running.
3. Verify battery maintenance and operations. Leaving the battery at a high level of charge in a high-temperature environment for extended periods accelerates the loss of capacity.
4. Test and calibrate battery using HP PC Hardware Diagnostics (UEFI).
5. Verify battery life cycle using HP Support Assistant tool.
   - If battery cycle life is over specs (long life battery of 1000-cycle life and 3-year warranty), battery may have capacity loss beyond its lifecycle or warranty.
6. Compare discharge time with a verified working battery (remove AC adapter) using Hardware Diagnostics (UEFI) > Hard Drive Tests > Extensive Test > Loop until error.

**Tips and tricks**

To conserve battery power, turn off Wireless On-Off button and other peripherals/USB devices, applications, processes (in Task Manager) when not in use; also, reduce screen brightness.

### Burnt smell

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Emits smoke, burnt smell</td>
<td>Defective on-board components.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

**General visual inspection**

1. Disconnect the computer from power source (AC adapter and battery).
2. Inspect for visual damage on AC adapter and battery. Test on a known working computer to isolate issue. If issue follows AC adapter or battery, replace it.
<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.</td>
<td>Inspect any sign of liquid spill on the computer (back of keyboard).</td>
</tr>
</tbody>
</table>

The sections below are intended for authorized service providers/technicians.

Further inspection on components

1. Inspect further sources internally after disassembling chassis, such as burnt or damaged components.
2. If the issue persists, replace boards, AC adapter, and battery for safety concern and report issues to HP.

POST

No video (with power)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
</table>

Symptoms

- No video (black/blank image) but have power
- Light activity
- No error messages
- Fan noise
- Hard drive light blinking and hard drive noise

Possible causes

- Failed display
- Failed critical components (memory, hard drive, system board)
- Loose connection
- Recently added hardware

NOTE: Assume the computer has not previously been set up for multiple displays.

Troubleshooting steps

Quick check

1. Verify that system light activity is OK.
2. Remove all external devices, including docking station. Recently added hardware and/or applications may cause graphics driver conflict and result in loss of video.
3. Perform hardware reset (8. Hard reset on page 57) and verify that HP Logo is presented correctly on display screen when pressing F10.
4. Test with external monitor via VGA port (or DisplayPort, HDMI, etc). Press power button and close the computer lid to force video output to external video. If unsuccessful, contact HP service.
5. If external video is OK, update BIOS, software, and drivers (4. Update BIOS and drivers on page 49) and perform soft reset (9. Soft reset (Default Settings) on page 58) if needed. Go to next step to verify display.

Verify display

- When booting to Windows, determine whether image appears on display screen (via Windows Screen Solutions or Windows logo + P for display switcher).
- If there is video on display, disconnect external display device, open the computer lid and restart.

The sections below are intended for authorized service providers/technicians.

1. Verify Power Good lights are on to be sure that system board power is functional.
2. Reseat display cable connection on system board.
3. Reseat display cable connection on display panel side.
4. Examine and reseat major components, such as hard drive, memory.
5. Test with minimum configuration by removing hard drive to isolate operating system issues and testing video in F10 Setup.
6. If video is present, restart and retest the computer.
7. If video is present but bad, go to Display on page 81 section.
8. If issue persists (no video), test with external video.
9. If issue persists, test or replace a confirmed working display.
10. If issue persists, replace discrete graphics card.
11. If issue persists, replace system board due to defective video function.

Tips and tricks

Swipe a metal piece (screwdriver) over wireless/mute buttons to act as if closing lid to force video output to external display device. See the “External component identification – Display” section for location of the magnetic sensor.

Blinking lights

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Possible causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lights blink on keyboard</td>
<td>Blinking lights on startup usually indicate a problem with basic functionality of a critical component (processor, BIOS, graphics cards, memory, etc.) due to loose connection, defective parts, or recently added parts.</td>
</tr>
</tbody>
</table>

Troubleshooting steps

1. Check for any blink patterns. Count the number of blinks in a sequence, followed by a pause for a few seconds.
2. See Status, Blinking Lights, and Error Message for corrective actions.
3. If internal hardware components (memory, hard drive, etc.) have been recently added, a component may not be connected properly. Remove and reseat new components one at a time.

Note

Since the display may not be functional, lights are used to indicate an error.

Diagnostics error messages

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Possible causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer has power</td>
<td>Diagnostic error messages indicate a problem. There may be a problem with the instruction being sent from the BIOS to a hardware component (e.g., keyboard failures), or incompatible hardware. Can usually be resolved by installing updated firmware for the component.</td>
</tr>
<tr>
<td>POST error message displays (Windows logo has not yet appeared)</td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps
## Items

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>See <a href="#">7. Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54</a> for corrective actions. An example of a POST error message is shown below.</td>
</tr>
<tr>
<td><img src="image" alt="Boot Device Not Found" /></td>
<td><strong>Note</strong> An Error Message means the system has finished BIOS hardware validation and is ready to launch the <strong>Startup Menu</strong>. To access the <strong>Startup Menu</strong> for further options, press the <strong>Esc</strong> key while restarting the computer.</td>
</tr>
<tr>
<td>2.</td>
<td>If there is power, you may be able to access BIOS. Reset BIOS to its default condition. (<a href="#">9. Soft reset (Default Settings) on page 58</a>)</td>
</tr>
<tr>
<td>3.</td>
<td>Restore hardware to its original condition (i.e., bootable solid-state drive instead of hard drive).</td>
</tr>
<tr>
<td>4.</td>
<td>Reseat suspected components and verify connection.</td>
</tr>
<tr>
<td>5.</td>
<td>Test suspected components using HP PC Hardware Diagnostics (UEFI) tool.</td>
</tr>
</tbody>
</table>
## BIOS password

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Some sections are unavailable (grayed out)</td>
<td>BIOS administration password is required.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Review F10 BIOS Setup Overview to determine which features must be enabled.
2. Your BIOS settings may be managed by a BIOS administrator password setup.
3. If you lost or forgot user password, contact your IT personnel.
4. If you lost or forgot administrator password, contact HP service to reset the password. This process requires a unique UUID.

**Reference**

HP F10 Setup Overview

http://h10032.www1.hp.com/ctg/Manual/c04460979
http://h10032.www1.hp.com/ctg/Manual/c04685655

2015 Business PC models – see the BIOS F10 Setup technical white paper at http://support.hp.com, enter your computer model, and then go to Manuals > White papers > HP PC BIOS F10 Setup Guide.

## Performance (OS)

**NOTE:** Most software problems occur as a result of the following:

- The application was not installed or configured correctly.
- There is insufficient memory available to run the application.
- There is a conflict between applications.

Make sure that all the needed device drivers are installed.

If an operating system other than the factory operating system is installed, check whether the operating system is supported and the application is certified for the version of the operating system.

HP ships and supports Windows 7 with BIOS Legacy boot mode and Windows 8, 10 with BIOS UEFI boot mode. Therefore, HP recommends that you switch BIOS boot mode from Legacy to UEFI Native for clean Windows 8, 10 installations, or to UEFI Hybrid (if available) for upgrading the option from Windows 7 to Windows 8, 10. UEFI Windows 8, 10 avoids many unexpected behaviors (i.e., blue screen error, graphics/video issues) in the BIOS Legacy setting.
Intermittent shutdown

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td>Possible causes</td>
</tr>
<tr>
<td>• Shutdown during startup</td>
<td>It is often difficult to troubleshoot an intermittent issue. Possible causes include the following:</td>
</tr>
<tr>
<td>• Shutdown during operation</td>
<td>Power-related issue: defective or insufficient power sources, poor connection.</td>
</tr>
<tr>
<td></td>
<td>OS Custom Setting: Energy Saver (Power Management),</td>
</tr>
<tr>
<td></td>
<td>Thermal-related issue: thermal sensors reach limits.</td>
</tr>
<tr>
<td></td>
<td>Hardware related issue: voltage, out-of-range current; electrical short.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Update BIOS and drivers. ([4, Update BIOS and drivers on page 49](#))
2. Perform hard reset ([8, Hard reset on page 57](#))
3. Perform soft reset ([9, Soft reset (Default Settings) on page 58](#))

**Power related issue**

1. Verify functionality of AC adapter alone. If no functionality, test with a verified working adapter.
2. Verify battery alone. Verify that battery is not depleted. Test battery using HP PC Hardware Diagnostics (UEFI) tool.
3. Verify connection of power button, power cable.

**OS custom settings**

1. Advise users to reset power options and close all applications that are not in use, including applications in the background.
2. Test with a confirmed working operating system to isolate custom settings by users or any conflicting applications that cause shutdown.

The sections below are intended for authorized service providers/technicians.

**Thermal-related issue**

1. Verify thermal condition:
   a. Test fan using HP PC Hardware Diagnostics (UEFI) tool ([6, HP Hardware Diagnostics and Tools on page 50](#)).
   b. Check fan and connection. Reseat fan cable.
   c. Be sure that no obstructions or dust are in heat sink fan, fin, or vent.
   d. Test with a verified working fan.
   e. Remove old thermal compound and pads and replace with new compound and pads.
2. Verify thermal solution:
   ○ Use Thermal Monitor tool (available only to authorized service providers/technicians) to perform stress test (processor and GPU) ([6, HP Hardware Diagnostics and Tools on page 50](#)) and verify that thermal sensors are within limits after thermal condition is serviced.

**Hardware related issue**

1. Check for any signs of loose connections, bent pins, stray wires, dust, nearly faulty parts (bulging/leaking capacitor).
### Items | Procedures
--- | ---
2. | Verify that lights are solid.
3. | If shutdown is reproducible, test essential hardware configuration:
   a. | If no issue with hardware configuration, reinstall one non essential component at a time to determine faulty hardware.
   b. | If issue persists, replace essential hardware with a confirmed working part, one at a time. If no boot, replace system board.

### Tips and tricks
Intermittent issue is difficult to reproduce and troubleshoot. It is important to record details on shutdown frequencies, system configuration (3D video application) and operating conditions.

### Blue screen

#### Items | Procedures
--- | ---
**Symptoms** | **Possible causes**
- Have power, light activity, fan spinning | Recent changes: conflict of instructions from multiple programs or just added hardware.
- HP Logo displays briefly | Incompatible hardware and driver.
- Fails to boot into Windows operating system, displays blue screen, and then crashes, restarts, or stops responding | Poor connection (hard drive, memory). Hardware malfunctioning due to overheating (GPU, processor). Defective hardware (memory, hard drive).

#### Important Notes & Resources
**Troubleshooting steps**
There are many different ways to troubleshoot a blue screen error. Therefore, you need to identify working configuration (Windows 7/8/10) and specific symptoms of the failure in order to narrow down the issue. Refer to Blue screen (BSOD) error on page 98.

#### Recommended resources
Microsoft knowledge base:
For more information search for HP Troubleshooting Error Messages on a blue screen at [http://www.hp.com](http://www.hp.com).

### Overview of General Troubleshooting Steps for a blue screen error
1. Note the blue screen error message and what activity was performed at the time.
3. Reset BIOS to default (9. Soft reset (Default Settings) on page 58) to prevent booting to another device.
4. Run HP Hardware Diagnostics (6. HP Hardware Diagnostics and Tools on page 50) to isolate major faulty hardware issues.
● HP PC Hardware Diagnostics (UEFI) tool to test hard drive, memory and system.

● Thermal Monitor (available only to authorized service providers/technicians) tool to monitor temperature limits of processor and GPU. See “HP Thermal Monitor” in 6. HP Hardware Diagnostics and Tools on page 50.

5. Remove or undo recently added hardware (5. Remove or uninstall recently added hardware, software on page 49). For example, incompatible memory or new solid-state drive storage.

7. Verify that a minimum of at least 100 MB of free space is available on your Windows partition.

8. If you can start Windows:
   a. Update BIOS and drivers (4. Update BIOS and drivers on page 49) to support updates for incompatibilities.
   b. Get all the latest updates, using Windows Update.
   c. Undo recent changes:
      – Startup using Last Known Good Configuration.
      – Use System Restore.
      – Roll back device driver in Device Manager.
   e. Boot to safe mode (11. Test with minimum configuration on page 59) to troubleshoot issues.

9. If you cannot start Windows:
   a. Boot to safe mode. (11. Test with minimum configuration on page 59)
   b. Use Startup Repair to fix Windows startup files.
   c. Undo recent changes using System Restore to revert to a previous “working” state.
   d. Check for specific STOP error by analyzing Crash Dump (retrieved via a bootable USB). See Use Windows Debugging Tool on page 110.
   e. Restore computer using System Recovery or image backup to factory settings.

10. Lastly, test with essential hardware configuration (11. Test with minimum configuration on page 59) along with a verified working operating system (i.e., USB Windows-To-Go), if available, to isolate the software issue.

Tips & tricks

In some cases, the computer may reboot automatically before you have time to read the blue screen.

To identify the error message itself, disable the automatic restart using one of the following methods:

Right-click on My Computer, and then select Properties > Advanced. Under Startup and Recovery, select Settings. Clear the Automatically Restart check box.
Windows Advanced Boot Option

Windows 7:
1. Press **F8** to open the Windows Advanced Boot Option screen.
2. Select **Disable automatic restart on system failure** to view error messages.

Windows 8:
1. Press **F11** (System Recovery) to open the Windows Advanced Boot Option screen.
2. Select **Startup Settings** to view error messages.

Freeze at Windows Logo (hang/lockup)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>

</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>System locks up, freezes in certain physical area or location</td>
<td>Electromagnetic interference (EMI).</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. See [2. Examine the environment on page 48](#). Pay attention to external power source, high-frequency signals such as cell phones, microwave ovens.
2. Move the computer to different locations nearby to determine where it fails and where it does not fail.
3. Test with a verified working computer in original factory configuration.
4. Consult with support.
When resuming from a power management state the computer may display:

- Blank screen
- Some light activity

### Possible causes

Power-saving mode; multiple-display setting.

### Troubleshooting steps

1. Verify that front power light (7. Status lights, blinking light codes, troubleshooting lights, and POST error messages on page 54) is blinking (indicating Sleep state). Press power button to exit Sleep.

2. Reset BIOS to default (associated with OS Power Management in Power Menu (4. Update BIOS and drivers on page 49)

3. Verify power management settings in Windows Power Options. Disable Sleep options if the issue is resolved.

4. Screen saver is set. Press any key or touch TouchPad to resume.

5. Verify that Display Choice is set to external video only. Toggle screen control key combination *Fn + F4* or *Windows logo + P*.

### Tips and tricks

If you are using a docking station, set your notebook display as a primary display. When the computer is undocked, you may think it is in a power-saving state, but the screen image may actually display on an external display device in the docking configuration.
### Unresponsive

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptom</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Unresponsive</td>
<td>Program in use has stopped responding to commands.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. If possible, use the Windows Task Manager to isolate and terminate the offending process.
2. Attempt the normal Windows shutdown procedure.
3. Restart the computer using the power button.

### Slow performance

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptom</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Slow performance when performing small tasks, or even in idle mode</td>
<td>Processor is hot or hard drive is full.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

**Processor is hot**

1. Verify that airflow to the computer is not blocked.
2. Verify that chassis fans are connected and working properly. Some fans operate only when needed.
3. Verify that the processor heat sink is installed properly.

**Hard drive is full**

1. Transfer data from the hard drive to create more space on the hard drive. Microsoft recommends at least 200 MB to sync system files.
2. Perform disk defragmentation to consolidate fragmented data on the hard drive so it will work more efficiently.

Also see [Slow performance on page 98](#).

**Tips and tricks**

See [Routine Maintenance for Performance Improvement on page 109](#).

HP Smart Adapter warning message

### Items

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Warning message displayed in Window</td>
<td>Possible causes</td>
</tr>
<tr>
<td></td>
<td>Less powerful AC adapter, BIOS out of date.</td>
</tr>
</tbody>
</table>

#### Troubleshooting steps

1. Update BIOS that may contain a table that assigns an appropriate adapter for a certain configuration.
2. Update the latest HP Hotkey Support software from Drivers website.
3. Verify sufficient power source (where adapter is connected).
4. Use appropriate AC adapter (often supplied with system) for optimum system performance.
5. Test with a verified working AC adapter.
6. Test the adapter on a verified working computer.
7. Contact HP for configuration details.

#### Note

**HP Smart AC adapter warning message** informs you that as power demands increase, the notebook may not perform at full capacity, which may result in longer battery-charging time. In cases of extreme power demands, the system may also throttle back the processor, or with systems that have a discrete video sub-system, a video balance mode may occur to further balance the power needs of the system.

System processor functions always have priority over battery charging, so charging delays will occur first.

---

**Incorrect time and date**

### Items

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incorrect date and time</td>
<td>Possible cause</td>
</tr>
<tr>
<td>Incorrect date and time</td>
<td>Real-time clock (RTC) battery might need replacement.</td>
</tr>
</tbody>
</table>

#### Troubleshooting steps

1. Reset the date and time in the operating system Control Panel.
2. Replace the RTC battery.
3. Verify that date and time are correct.
Display

Display anomalies

The display panel is a field replaceable unit (FRU) and must be replaced by only authorized technicians. However, HP highly recommends that users and technicians observe specific symptom vs. generic symptoms and utilize the HP PC Hardware Diagnostics (UEFI) tool before any replacement.

Symptom

Common display issues with symptoms:

- Blank/black video
- Incorrect/missing color/distorted image
- Flickering image
- Vertical lines (due to LDVS, decreased signal integrity, and data loss)
- Dead pixel (due to display liquid, internal transistor, etc.)
- Horizontal lines (due to video memory)
- Distorted when hot (due to thermal issue)
- Cracked screen/image (physical damage)
- Light leakage/bleeding

Contact support for assistance.

- Humming noise (due to frequency settings)

Contact support for assistance.
Quick check

- Visually examine the display for cracked screen, liquid crystal leak, dirty spots on glass, etc.
- Reset and update BIOS and docking firmware.
- Update operating system (OS), graphics/video drivers (Intel/AMD/NVidia, etc).

For custom images, HP highly recommends upgrading or installing Windows in UEFI mode (or Legacy disabled) to fully support hybrid graphics and avoid unexpected behaviors (i.e., blue screen error, graphics/video issues) in the BIOS Legacy setting.

- Configure Windows settings (Power options, Screen brightness, Personalization, Screen resolution, etc.).
- Test with a verified working external display.
- Boot to Windows in safe mode.
- Test with a verified working operating system (i.e., shipping image).

HP PC Hardware Diagnostics (UEFI) for video test

Use this tool to quickly determine if the display issue is related to a real hardware issue.

To start HP PC Hardware Diagnostics (UEFI) (6, HP Hardware Diagnostics and Tools on page 50), when the computer is at boot, press the F2 key, select Component Tests, and then select Video.

There are three options:

- **Video Memory Check**: to test video memory
- **Palette Check**: to test the three video color components (red, green, blue)
- **Dead Pixel Check**: to check dead pixels in eight different colors (Dead Pixel Check is available with the “HP PC Diagnostics 3-in-1 USB Key” tool)

Review the video troubleshooting in the Display section below for specific issues and possible solutions. For additional information about display problems, refer to documentation provided by the product manufacturer.
Display assembly diagram

The display assembly diagram shows basic video components: system board, graphics cards, display cables, display connectors, operating system (OS), graphics driver, and LCD display panel. Any component or a combination of these components can contribute to a video issue.

![Display assembly diagram](image)

**NOTE:** The lid close switch is a Hall-effect sensor located in the top cover. When the display is closed, the sensor acts like a switch is closed. A notebook can force a video output to an external monitor, or go to hibernation or standby mode through power management. If the display screen does not light up when the display is open, the lid close switch (Hall-effect sensor) could be faulty.

### Dead pixel

Display panel may show one or more pixels that are not properly lit when displaying a single color over the screen area. Use HP PC Hardware Diagnostics (UEFI) tool to determine those defective pixels. There is no solution for dead pixels. Refer to [Display Issue: Pixel Anomalies on page 115](#) for the HP dead pixel policy.

### No video (internal)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>No internal video with certain programs (i.e., video-intensive games)</td>
<td>Display resolution, brightness, faulty lid switch, running a program requiring a higher resolution than the display screen can support. Faulty lid switch may put the system into Sleep or Hibernation mode.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

- Use an external monitor with higher resolution.
- Test with external monitor using HDMI or HP port. Press the power button and close the computer lid to force video output to external video. If there is still no video, contact support.

**References**

See section [No video (with power) on page 69](#) for display information.
## No video (external)

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>No image on external monitor</td>
<td>Possible causes</td>
</tr>
<tr>
<td></td>
<td>External monitor, resolution, display configuration, drivers.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Be sure external monitor is compatible with the computer.
2. Be sure that external monitor is turned on.
3. Press any key to get out power saving mode.
4. Adjust the brightness of the monitor.
5. Test with a verified working monitor.
6. Test the monitor via internal ports (VGA, DP ports).
7. Install latest video driver.
8. Reset the screen resolution as described in the documentation.
9. Configure display choice, and then force output to external video by closing the notebook lid or pressing Fn + F4 to switch screen output.

### DisplayPort/VGA

See [No video (external) on page 84](#).

### HDMI

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display issue</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Sound issue</td>
<td>Cable, connection, settings.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

**Quick Check**

1. Verify HDMI device input source is set correctly (i.e., HDMI1).
2. Be sure you are using the correct HDMI cable.
3. Check connection and reconnect the HDMI cable.
4. Verify if sound output is configured correctly in Control Panel > Sound Manager.

1. Perform hard reset ([4. Update BIOS and drivers on page 49](#)).
2. Update BIOS and drivers ([4. Update BIOS and drivers on page 49](#)) when sound is heard but no video on HDTV.

**References**

No or bad external video via docking

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>No or bad image on external monitor via ports of docking station (VGA, DP, TB, display port, etc.)</td>
<td>Rooted from system board, software/drivers, dock connectors, docking station hardware/firmware, dock video ports (DP, VGA, etc.)</td>
</tr>
</tbody>
</table>

Troubleshooting steps
1. Be sure that external monitor is powered on.
2. Be sure that external monitor is compatible with the computer.
3. If applicable, plug the dock in different Type-C ports.
   For more information, see the technical white paper titled "HP ZBook 65/150/200 W Thunderbolt 3 Dock User Guide." Go to [http://support.hp.com/](http://support.hp.com), enter your model number, and then click Manuals > Technical white papers.
4. If the screen image is distorted, try a DP-to-VGA adapter. Connect the adapter to each DisplayPort and VGA port of the dock.
5. Test the monitor via internal ports (VGA, DP, HDMI, etc.).
6. Verify that dock connectors of the notebook and the dock are clean, without dust, debris (e.g., using air duster).
7. Ideally, use a verified working operating system/system connected to the dock to isolate the issue of the current operating system.
8. Ideally, use a verified working docking station to isolate the faulty dock.
9. Update latest dock firmware. Be sure to follow the installation instructions carefully. You may want to try a DP-to-VGA adapter if you have a distorted screen image. Connect the adapter to each DisplayPort of the dock. If you still cannot update the dock, attempt to update it on a confirmed working notebook before having the dock replaced.

Note
See the technical white paper titled "Multiple displays on HP ZBook Mobile Workstations" from HP platform support website. Go to [http://support.hp.com/](http://support.hp.com), enter your model number, and then click Manuals > Technical white papers.

Incorrect or missing color/distorted image

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>System works normally but the display shows:</td>
<td>Loose connection, display cable, display, graphics card.</td>
</tr>
<tr>
<td>- Missing or strange color</td>
<td></td>
</tr>
<tr>
<td>- Image distortion</td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps

Verify with external monitor (i.e., VGA)
1. Use combination Fn + F4 to enable output to external monitor.
2. Close the lid.

If the external monitor also shows incorrect color, it is graphics card issue. Test with a verified working graphics card.

Verify display cable and cable connection—Display disassembly is required.

Be sure that external display cables are not pinched or damaged.
Be sure that external display cables have good connection at both ends (system board and display panel).

- If moving cables affects the image, it is display cable. Test with a confirmed working cable.
- If moving cables does not affect the image, is display issue. Test with a confirmed working display

<table>
<thead>
<tr>

86 Chapter 6 Troubleshooting guide
I/O devices

**NOTE:**
- Make sure external devices are supported and compliant (i.e., USB Type C, Thunderbolt 3, PCI Express, etc).
- If you have problems with external devices not provided by HP, contact device manufacturers for compatibility and latest drivers prior to troubleshooting (i.e., USB devices, Thunderbolt devices, PCI Express Card reader, VGA/Display/HDMI monitors, Speakers, etc).
- Be sure I/O devices are properly inserted into the I/O ports, and then be sure the I/O devices are recognized by Windows Device Manager.

Keyboard

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Keystrokes not recognized</td>
<td>Dust trapped under keycap, loose keycap, loose keyboard connection, defective keyboard.</td>
</tr>
<tr>
<td>Characters not matched</td>
<td></td>
</tr>
</tbody>
</table>

**Troubleshooting steps**
1. Inspect the keyboard for any signs of dust, liquid, or debris trapped under sticky keys that might prevent keystroke recognition.
2. Check for incomplete connection between keyboard and system board by verifying that `caps lock` or `num lock` light turns on when key is pressed.
3. Verify whether the keyboard is recognized in Windows Device Manager and verify whether the keyboard driver is installed properly.
4. Test with a working external keyboard (i.e., USB keyboard).
   Also test in Windows for special keys (`Caps Lock`, `Shift`, `Ctrl`, `Fn`, `Windows`, `Alt`) if necessary.
5. Test with HP PC Hardware Diagnostics (UEFI) to isolate a hardware issue from a software issue.
6. Verify that BIOS is up to date. If so, resetting BIOS to default may help.
7. Test with verified working operating system or restore operating system to be sure that the issue is not caused by different language settings, sticky keys feature, etc.
8. Verify that keyboard flex cables are fully inserted and in good condition.

The sections below are intended for authorized service providers/technicians.

- Verify if keyboard flex cable is in good condition (no delamination or torn cable end, no missing or cracked tracks, pads).
- Verify keyboard flex cable ends are fully inserted and aligned with connectors on system board, and those connector tabs are properly closed. Reseat cables.
- Replace new internal keyboard and retest.

**Tips and tricks**
A key only works when pressed with force. Inspect and remove debris trapped under keycap.
# Keyboard point stick

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptom</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Point stick not working properly</td>
<td>Dust trapped under point stick, loose point stick cap.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Inspect any signs of dust, liquid spill that prevent point stick from working.
2. Check whether point stick cap is loose and reseat it if necessary.

The sections below are intended for authorized service providers/technicians.

![Example of back of keyboard, including keyboard, point stick, and backlight cables.](image)

## Keyboard backlight

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptom</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Backlight function not working properly</td>
<td>Backlight disabled, loose connection.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Verify whether keyboard flex cables are in good condition (no delamination or torn cable end, no missing or cracked tracks, pads).
2. Verify keyboard flex cable ends are fully inserted and aligned with connectors on system board and back of keyboard and that connector tabs are properly closed.
3. Reseat point stick cables.

**NOTE:** Not all notebook computers have backlit keyboards.

A keyboard function key lets you turn the light on and off. Verify if backlit feature is not disabled by pressing a combination of **Fn + Backlit** key.

The sections below are intended for authorized service providers/technicians.

1. Verify if backlight flex cables are in good condition (no delamination or torn cable end, no missing or cracked tracks, pads).
2. Verify backlight flex cable ends are fully inserted and aligned with connectors on system board and that connector tabs are properly closed.
3. Reseat backlight cable.
## TouchPad

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Not working properly</td>
<td>On/Off enabled, driver, settings.</td>
</tr>
</tbody>
</table>

(1) – TouchPad on/off button

(2) – TouchPad

**Troubleshooting steps**

1. Ensure TouchPad On/Off light is not amber (disabled). Double touch to enable.
2. Verify if TouchPad device is listed in Device Manager > Mice and other pointing devices.
3. Install the latest TouchPad driver.
4. Adjust TouchPad settings (Control Panel > Mouse).
5. Test TouchPad controller using the HP PC Hardware Diagnostics (UEFI) tool (F2 > Component Tests > Mouse Test > Pointer Test & Drag and Drop Test).

The sections below are intended for authorized service providers/technicians.

1. Check the TouchPad cable for damage or a loose connection, and then reseat the TouchPad cable.
2. If issue persists, replace the TouchPad and verify the change.

## Network Connectivity Ethernet (RJ-45 jack)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>● Unable to find networks (yellow bang)</td>
<td>Network source, cable, connection, RJ-45 port, driver, settings.</td>
</tr>
<tr>
<td>● Connection dropouts</td>
<td></td>
</tr>
<tr>
<td>● Slow performance</td>
<td></td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

**Quick Check:** verify the network status lights that supposed to flash when there is network activity.

1. Turn off the computer’s wireless feature (press wireless button).
2. Verify that networking source with recommended distance to the base is less than 300 feet.
3. Examine the Ethernet cable for damage. Test with a verified working cable.
4. Test with different networks and jacks and check with IT for hardware compatibility settings.
5. Connect a verified working RJ-45 cable directly to the computer to isolate other related issues (e.g., router, switch, docking station).
6. Verify Ethernet port lights (RJ-45):
   - Green (left): network is connected.
   - Amber (right): network is showing activity.
7. Test with HP Support Assistant in Windows.
<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.</td>
<td>Diagnose with HP PC Hardware Diagnostics (UEFI) to isolate a hardware issue from a software issue.</td>
</tr>
<tr>
<td>9.</td>
<td>Examine Ethernet ports on the computer, docking station, and wall for damage, dust, obstructions.</td>
</tr>
<tr>
<td>10.</td>
<td>Update drivers: Verify that Ethernet module is displayed in Device Manager and be sure that device driver is up to date. If updating drivers does not help, try rolling back to previous drivers.</td>
</tr>
<tr>
<td>11.</td>
<td>Reset BIOS to Default: If other devices can connect to network, but computer cannot connect, a BIOS setting might be the cause of the problem. Restore BIOS to default.</td>
</tr>
<tr>
<td>12.</td>
<td>Test with verified working operating system or perform operating system recovery to verify that the issue is not caused by customized settings.</td>
</tr>
<tr>
<td>13.</td>
<td>Replace system board and verify that the issue is fixed.</td>
</tr>
</tbody>
</table>

### Network connectivity wireless (WLAN)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>● Unable to find networks (yellow bang)</td>
<td>Network source, cable, connection, wireless module, driver, settings.</td>
</tr>
<tr>
<td>● Connection dropouts</td>
<td></td>
</tr>
<tr>
<td>● Slow performance</td>
<td></td>
</tr>
</tbody>
</table>

#### Troubleshooting steps

1. Turn off the computer’s wired network (remove RJ-45 cable).
2. Examine environment for interference, such as cell phone or microwave, that may emit high frequencies (above 1 GHz).
3. Verify wireless source by moving computer closer to the wireless base/router.
4. Test with different wireless networks and check with your IT department for hardware compatibility, settings.
5. Verify that the wireless light is on. If the light is amber, press the wireless button to enable the wireless device.
6. Test with HP Support Assistant in Windows.
7. Diagnose with HP PC Hardware Diagnostics (UEFI) to isolate a hardware issue from a software issue.
8. Update drivers: Verify that wireless module is displayed in Device Manager and be sure that wireless drivers are up to date using www.hp.com or HP Support Assistant. If updating drivers does not help, try rolling back to previous drivers.
9. Reset BIOS to Default: If other devices can connect to your wireless network, but your computer cannot connect, a BIOS setting might be the cause of the problem. Restore BIOS to default.
10. Configure power management advanced settings as necessary.

In the example to the left, **U-APSD support** (Unscheduled Automatic Power Save Delivery) is changed to **Disabled** to resolve an incompatible access point. If disabling U-APSD improves the throughput issue, check with the access point provider for updated firmware that resolves the issue.
Items | Procedures
--- | ---
11. | Test with verified working operating system or perform operating system recovery to verify that the issue is not caused by customized settings.
12. | Test with a verified working wireless module.

The sections below are intended for authorized service providers/technicians.

1. Verify that the wireless module and its antenna cables are fully inserted and in good condition (see WLAN module removal and replacement section). Reseat wireless module and antenna connection.
2. Verify module antenna cable connection are not loose.
3. Verify antenna cables are properly connected to the MAIN and AUX terminals (see WLAN module removal and replacement section).

### WWAN

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptom</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Unable to find networks/service</td>
<td>Network source, cable, connection, driver, settings.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Update to the latest driver and utility.
2. Check with network service provider for signal coverage.
3. Make sure signal strength is good.
4. Make sure your service is active.

The sections below are intended for authorized service providers/technicians.

- Verify module and antenna cable connections are not loose.
- Verify antenna cables are properly connected to the correct terminals. For example, the antenna cable labeled “1” connects to the “Main” terminal labeled “1”. The antenna cable labeled “2” connects to the “Aux” terminal labeled “2”.

Common issues and possible solutions  91
**USB**

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>• USB devices are not recognized</td>
<td>USB devices do not have the latest software drivers, port insufficient power, or not compliant.</td>
</tr>
<tr>
<td>• USB devices are not charging</td>
<td></td>
</tr>
<tr>
<td><strong>NOTE:</strong> USB Type-C uses a different connector entirely</td>
<td></td>
</tr>
</tbody>
</table>

**Examples of USB device Not Recognized**

**Troubleshooting steps**

1. Unplug USB device and/or restart the computer (wait for 2-5 minutes) to reset USB port/hub in case of power surge.
2. Soft Reset (9. Soft reset (Default Settings) on page 58) and verify if USB device is recognized.
3. Verify if USB device is recognized in Device Manager > Universal Serial Bus Controller, or USB is recognized without Yellow bang.
4. Verify if the latest USB driver or/and USB chipset driver are installed. USB driver could be removed and reinstalled.
5. Make sure USB device is supported, for example, USB 3.0 device requires more power drawn (0.9A) from USB port than USB 2.0 device (0.5A). As a result, identify USB charging port to be used for charging a USB device, or an external AC power adapter may be required for an external USB storage to work properly.
6. Test with verified working USB devices (keyboard, mouse, USB key) to make sure USB ports are functional.
7. Test USB device on a verified working computer to make sure USB device is not malfunctioning.
### Smart card reader

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>● Not recognized</td>
<td>Physical damage, incorrect insertion, dirt, driver, malfunctioning card reader.</td>
</tr>
<tr>
<td>● Unable to write</td>
<td><strong>NOTE:</strong> Some cards have a read/write security switch on the card. Make sure that switch is set to &quot;write enabled&quot; before attempting to write data to it.</td>
</tr>
</tbody>
</table>

#### Card Reader Removal Policy

#### Troubleshooting steps

1. Verify card reader removal policy.
2. Make sure there is no physical damage to the card.
3. Inspect the ends of the memory cards for dirt or material closing a hole or spoiling a metal contact. Clean the contacts with a lint-free cloth and small amounts of isopropyl alcohol. Replace the memory card if necessary.
4. Reinstall and update the drivers for the card reader.
5. Make sure the smart card reader is compliant with ISO 7816 Class A, B, and C.
6. Reinsert the card reader with correct face as described in its documentation.
7. Check reader function with a verified working card.

**CAUTION:** If the card reader has an in-use indicator light, do not insert or remove memory cards while the light is flashing. Doing so may cause loss of data on the card or may permanently damage the card reader.
### Speaker, headphone - audio issues

<table>
<thead>
<tr>
<th><strong>Items</strong></th>
<th><strong>Procedures</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>● No sound from external or internal speakers</td>
<td>Volume turned down, sound card not recognized, malfunctioning hardware, electronic interference.</td>
</tr>
<tr>
<td>● Distorted sound, too soft, too loud, intermittent</td>
<td></td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Remove any device connected to the Audio jack to enable the internal speaker.
2. Close all open programs.
3. Adjust volume by pressing `Fn + F6/F7`. Be sure that volume button light is not amber (mute).
   - or -
   Adjust Windows volume control by clicking the speaker icon on the Windows taskbar. Be sure that the sound is not muted.
4. Verify that sound card is detected in Windows Device Manager.
5. Reinstall the **latest audio driver**.
6. Test audio device using HP PC Hardware Diagnostics (UEFI) tool (`F2 > Component Tests > Audio`).
7. Test with a verified working operating system. If issue is resolved, restore full operating system.
8. Test with verified working external speakers or headset.
9. Reseat internal speaker connections.
10. Test with verified working internal speakers.
11. Replace internal speakers.

#### No sound from headphones

1. Adjust volume by pressing `Fn + F6/F7`. Be sure that volume button light is not amber (mute). Or adjust Windows volume control by clicking the speaker icon on the Windows taskbar. Be sure that the sound it not muted.
2. Check headphone cable connection.
3. Test with a verified working audio board.
4. Replace audio board and verify the change.

#### No sound from external speakers

1. Verify that external speakers are turned on.
2. Disconnect headphones from headphone jack.
3. Adjust volume by pressing `Fn + F6/F7`. Be sure that volume button light is not amber (mute).
   - or -
   Adjust Windows volume control by clicking the speaker icon on the Windows taskbar. Be sure that the sound is not muted.
4. Check for possible interference devices nearby that may impact the audio (cell phone or portable communications handset.)
Thunderbolt (TB)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptom</td>
<td>Possible causes</td>
</tr>
<tr>
<td>Thunderbolt device not working</td>
<td>BIOS, drivers, and user settings.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Update to the latest BIOS and choose appropriate TB Port settings.
2. Reset User Account Settings to default.
3. Update Intel Thunderbolt software that includes firmware version (for TB controller), driver version (operating system driver), and application version.

4. Verify that TB device is detected in Windows Device Manager.
5. Verify TB port, cable and connection.
6. Test with a verified working TB board, if possible.

**NOTE:** Thunderbolt is new technology. Thunderbolt cable and Thunderbolt device must be compatible with Windows. To determine whether your device is Thunderbolt Certified for Windows, see [https://thunderbolttechnology.net/products](https://thunderbolttechnology.net/products).
Storage

**NOTE:**

- Back up all critical data prior to drive troubleshooting.
- Prior to contacting support, HP recommends that you run a drive (HDD, SSD, M.2 drive) test using the HP PC Hardware Diagnostics (UEFI) tool on the suspected failed drive.
- The drive quick test is recommended to quickly (less than 10 minutes) identify the malfunctioning drive. If the issue still exists, run Extensive Test (more than 2 hours, or loop mode, which will run until an error occurs).
- If any test fails, record failure code and contact support for instructions on how to order a replacement hard drive.
- If all of the tests pass, the hard drive is not damaged. As a rule, HP will not replace a hard drive under warranty that does not fail the HP Hard Drive Self-Test.
- If there is no physical problem with the hard drive (or memory), then try reinstalling the Windows operating system to troubleshoot the problem.

---

**Hard Drive Tests**

The Hard Drive Tests will check your system to make sure the system hard drives (hard disk or solid state drive) are functioning properly. You can select the following tests:

- Quick Test
- Extensive Test
- SMART Status
- Read/Write
- Quiet/Normal
- Long/Short
- Read Test
- Back
### Hard drive/solid-state drive not recognized

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptom</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Hard drive is not recognized during POST</td>
<td>Loose connection, faulty hard drive, faulty drive configuration/BIOS setting.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Perform a hard reset ([Hard reset on page 57](#)).
2. Reset BIOS to default.
3. Verify hard drive connection and flex cable. Reseat hard drive and cable connection. For multiple storage devices, keep the primary drive with the operating system and remove other devices.
4. Use the HP Hardware Diagnostics tool to verify the drive is recognized and test it.
5. If the hard drive fails diagnostics, record failure and have the drive replaced.
6. Identify when the issue is related to software. If the hard drive passes diagnostics, test the drive on a verified working computer. If the failure follows the drive, reinstall the operating system to make sure software is not an issue.
7. Test with a verified working hard drive. If it is still not recognized, the system board is faulty.

**NOTE:** If the drive is seen in BIOS and Diagnostics, try a secure erase prior to replacing a drive as this may resolve related issues.

### No boot to operating system (no read/write error)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>● Post error message: Boot Device not found (3F0)</td>
<td>Operating system, loose connection, faulty hard drive, BIOS configuration, Secure Boot.</td>
</tr>
<tr>
<td>● Hang when booting to operating system</td>
<td></td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

1. Verify if Secure Boot is enabled in BIOS. Secure Boot prevents legacy boot devices from starting the computer, including bootable CDs and DVDs. For more information, see [http://support.hp.com/us-en/document/c03653226](http://support.hp.com/us-en/document/c03653226).
2. Reset BIOS to default. Be sure that BIOS [Boot Mode in Boot Option](#) is set up properly for bootable device and its operating system (i.e., UEFI Native for Windows 8).

   Another example, choosing Legacy Boot Order for an UEFI device will cause “Boot Device not found (3F0)” error.
3. Verify hard drive connection and flex cable. Reseat connection. For multiple storage devices, keep the primary drive with the operating system and remove other devices.
4. Use PC Hardware Diagnostics tool to test. Record failure code and have the hard drive replaced.
5. If there is no error, reinstall the operating system using HP Restore.
6. Test with a verified working operating system hard drive, if available.

**Note**

If there is a hard drive POST error message, see [POST Error Messages and User Actions on page 107](#).
**Read-write error**

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Post error message (i.e., error code 301)</td>
<td>Loose connection, faulty hardware.</td>
</tr>
<tr>
<td>Hang when working on data, files, documents</td>
<td><strong>Troubleshooting steps</strong></td>
</tr>
<tr>
<td></td>
<td>2. Reset BIOS to default [9. Soft reset (Default Settings) on page 58].</td>
</tr>
<tr>
<td></td>
<td>4. Use the HP Hardware Diagnostics tool to test. If failed, record failure code and have the hard drive replaced.</td>
</tr>
<tr>
<td></td>
<td>5. If no error with HP PC Hardware Diagnostics (UEFI) tool, try to repair the hard drive and its files in Windows (using command “\CHKDSK /T /R /X”). Use HP Restore to reinstall the operating system, if needed.</td>
</tr>
<tr>
<td></td>
<td>6. Test with a verified working hard drive. If it is not recognized, the system board is faulty.</td>
</tr>
</tbody>
</table>

**Note**
If there is a hard drive POST error message, see [POST Error Messages and User Actions on page 107].

---

**Slow performance**

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Slow performance even when performing small read/write operations</td>
<td>Operating system files, hard drive is full.</td>
</tr>
<tr>
<td></td>
<td><strong>Troubleshooting steps</strong></td>
</tr>
<tr>
<td></td>
<td>1. Transfer data from the hard drive to create more space. Microsoft recommends at least 200 MB to sync system files.</td>
</tr>
<tr>
<td></td>
<td>2. Perform disk defragmentation to consolidate fragmented data on the hard drive so it will work more efficiently.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> Do not defrag an SSD.</td>
</tr>
<tr>
<td><strong>Tips &amp; tricks</strong></td>
<td>For optimal system performance, you need to place your operating system and all of your most commonly used applications and files in the fastest hard drive (solid-state drive) and fastest areas on the drive (primary partition of 200 GB max).</td>
</tr>
<tr>
<td></td>
<td>See [Routine Maintenance for Performance Improvement on page 109].</td>
</tr>
</tbody>
</table>

---

**Blue screen (BSOD) error**

Faulty hard drive may cause blue screen error. Perform the drive tests using the HP Diagnostics Tool to make sure the drive is functional. If all of the tests pass, see [Common Blue Screen Error Messages on page 109] for detailed troubleshooting steps.
Noisy hard drive

IMPORTANT: An SSD has no moving parts, so it does not make loud or clicking noise.

Depending on type and rotational speed, some hard drives will make more noise than others.

Not all noises are related to the fan or hard drive.

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td>Possible causes</td>
</tr>
<tr>
<td>● Loud noise from hard drive</td>
<td>BIOS, hard drive firmware, driver, faulty drive, power supply (AC adapter).</td>
</tr>
<tr>
<td>● Clicking noise from hard drive</td>
<td></td>
</tr>
<tr>
<td>● Still boots to operating system and operates normally</td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps

1. Update BIOS and hard drive firmware.
2. Examine AC adapter to be sure that it is not faulty or overloaded. Disconnect all peripherals (USB storages, dock, etc.).
3. Remove hard drive to isolate the noise.
4. Test the hard drive on a verified working computer if the noise continues. If the hard drive makes the same noise or clicking sounds, the sounds are either normal sounds for the hard drive or a fault with the hard drive.
5. Verify original hard drive connection and flex cable. Reseat hard drive and connection.
6. Run HP PC Hardware Diagnostics (UEFI). If failed, record failure code and have the hard drive replaced.
7. If no error with HP PC Hardware Diagnostics (UEFI), perform disk defragmentation (some hard drives make a clicking noise when highly fragmented).

Tips & tricks

For optimal system performance, place your operating system and all of your most commonly used applications and files on the fastest hard drive or solid-state drive and on the fastest areas on the drive (primary partition of 200 GB max).

See Routine Maintenance for Performance Improvement on page 109.)
# Mechanical

## Fan error message - 90B

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Fan error 90B at boot</td>
<td>Defective fan; out-of-date BIOS.</td>
</tr>
<tr>
<td><strong>CAUTION:</strong> May lead to system shutdown, data loss or possible system damage.</td>
<td></td>
</tr>
</tbody>
</table>

- The system fan is not spinning or not spinning properly (loose connection, fan is stuck or defective).
- The temperature inside the case is too high, and the fan cannot spin fast enough to remove the heat due to an obstruction to air flow.

### Troubleshooting steps

#### General actions

1. Update BIOS and drivers ([4, Update BIOS and drivers on page 49](49)) or reset BIOS to default. BIOS may implement new fan characteristics and updates for other components.
2. Perform a hard reset ([8, Hard reset on page 57](57)). Performing a hard reset can reset recorded thermal values in memory.

#### Thermal-related issue

1. Verify thermal condition:
   a. Check fan and connection. Reseat fan cable.
   b. Be sure that no obstructions or dust are in heat sink fan, fin, or vent.
   c. Test fan using HP PC Hardware Diagnostics (UEFI) tool (6, [HP Hardware Diagnostics and Tools on page 50](50)). Be sure that the fan is not producing loud noise and that fan blades spin correctly.
   d. Test with a verified working fan.
   e. Remove old thermal compound and pads, and replace properly with new pads.

2. Verify thermal solution
   - Use Thermal Monitor tool (available only to authorized service providers/technicians) to run stress test (processor and GPU) and verify that thermal sensors are within limits after thermal condition is serviced.

### Note

- BIOS currently omits fan presence detection to shorten boot time delay less than four seconds. Therefore, the fan error is generated based on previous boot to operating system that found system fan error.
- Fan often is part of thermal solution, including heat sink, fin/muffler, and thermal grease. Fan replacement requires reboot and fan function verification using HP PC Hardware Diagnostics (UEFI) tool.

### Noise (sound)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>Computer emits abnormal noise</td>
<td>Aside from basic components (power adapter/supply, fan, speaker, hard drive, optical drive, display panel, external devices), it is also common for electronic components to produce noise.</td>
</tr>
<tr>
<td></td>
<td><strong>Troubleshooting steps</strong></td>
</tr>
<tr>
<td></td>
<td>1. Inspect external power source and change to verified working one.</td>
</tr>
<tr>
<td></td>
<td>2. Determine whether the noise comes from AC power adapter. Test with a verified working AC adapter.</td>
</tr>
<tr>
<td></td>
<td>Disconnect external devices and all cables connected to the computer to isolate issue to computer only.</td>
</tr>
<tr>
<td>Noisy fan</td>
<td>Determine whether the noise comes from the fan. Disconnect the fan briefly to isolate whether noise originates from fan. If noise is absent with fan disconnected, refer to Fan runs constantly on page 102.</td>
</tr>
<tr>
<td>Noisy hard drive</td>
<td>Determine whether the noise comes from the hard drive.</td>
</tr>
<tr>
<td></td>
<td>See Noisy hard drive on page 99.</td>
</tr>
<tr>
<td>Noisy optical drive</td>
<td>1. Determine whether the noise comes from an optical drive.</td>
</tr>
<tr>
<td></td>
<td>2. Remove CD/DVD from the optical drive.</td>
</tr>
<tr>
<td>Noisy speaker</td>
<td>1. Determine whether the noise comes from speaker.</td>
</tr>
<tr>
<td></td>
<td>2. Test with a verified working external headset/speaker.</td>
</tr>
<tr>
<td>Noisy display</td>
<td>Determine whether the noise comes from display panel (humming noise). Change display frequency settings. See Display on page 81.</td>
</tr>
</tbody>
</table>

**The section below is intended for authorized service providers/technicians.**

1. After disassembling the chassis, inspect components of the interior for excessive wear or damage.
2. If noise issues persist, proceed with process of elimination for battery, AC adapter, or boards.
Fan runs constantly

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td><strong>Possible causes</strong></td>
</tr>
<tr>
<td>● Fan never stops running</td>
<td>● BIOS not up to date.</td>
</tr>
<tr>
<td>● Generates heat</td>
<td>● Thermal condition (fan, air flow)—fan may not be defective but must run constantly to remove excess heat generated by electrical components.</td>
</tr>
<tr>
<td>● Decreased computer performance</td>
<td>● Inappropriate configuration.</td>
</tr>
</tbody>
</table>

**Troubleshooting steps**

**General actions**

1. Verify whether BIOS is set to Fan Always on while on AC Power F10 Setup. When booting the computer, press F10 to open Setup, and then select Advanced > Built-In Device Options Menu.
2. Update BIOS and drivers (4. Update BIOS and drivers on page 49) and reset BIOS to default. BIOS may implement new fan characteristics and updates for other components.

**Thermal-related issue**

1. Verify fan is spinning. Reseat fan cable before moving to next step.
   a. Check fan and connection. Reseat fan cable.
   b. Be sure that no obstructions or dust are in heat sink fan, heat sink fin, or vent.
   c. Test fan using HP PC Hardware Diagnostics (UEFI) tool (6. HP Hardware Diagnostics and Tools on page 50). Be sure that the fan is not producing loud noise and that fan blades spin correctly.
   d. Test with a verified working fan.
   e. Replace the fan.
2. Verify thermal solution

   Use Thermal Monitor tool (available only to authorized service providers/technicians) (HP Thermal Monitor on page 53) to run stress test (processor and GPU) and verify that thermal sensors are within limits after thermal condition is serviced.

**User configuration**

Change Power Options in Windows (i.e., choosing Balanced mode instead of High performance). High performance and extensive graphics may cause the fan run constantly to release the heat.

**Notes**

BIOS currently omits fan presence detection to shorten boot time delay less than four seconds. Therefore, the fan error is generated based on previous boot to operating system that found system fan error.

Fan often is part of thermal solution, including heat sink, heat sink fin/muffler, and thermal grease. Fan replacement requires reboot and fan function verification using HP PC Hardware Diagnostics (UEFI) tool.

For more information, see the following links:

Thermal shutdown (hot)

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
<th>Possible causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Similar to fan runs constantly issue</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>● System shutdown</td>
<td></td>
<td></td>
</tr>
<tr>
<td>● Abnormal heat</td>
<td></td>
<td></td>
</tr>
<tr>
<td>● Continually running fan</td>
<td></td>
<td></td>
</tr>
<tr>
<td>● Decreased computer performance</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps

1. Update BIOS and drivers [4. Update BIOS and drivers on page 419] and reset BIOS to default. BIOS may implement new fan characteristics and updates for other component.
3. Determine whether you are using a correct AC adapter.
4. Be sure to turn power off completely when putting a notebook in a travel bag.

Thermal-related issue

1. Verify thermal condition:
   a. Check fan and connection. Reseat fan cable.
   b. Be sure that no obstructions or dust are in heat sink fan, fin, or vent.
   c. Be sure that the notebook is not sitting on a hot surface that blocks vent intakes.
   d. Test fan using HP PC Hardware Diagnostics (UEFI) tool [6. HP Hardware Diagnostics and Tools on page 50]. Be sure that the fan is not producing a loud noise and that fan blades spin correctly.
   e. Test with a verified working fan.
   f. Remove old thermal compound and pads, and replace properly with new pads.

2. Verify thermal solution:
   ○ Use Thermal Monitor tool (available only to authorized service providers/technicians) to run stress test (processor and GPU) and verify that thermal sensors are within limits after thermal condition is serviced.

Note

Stuck power button

<table>
<thead>
<tr>
<th>Items</th>
<th>Procedures</th>
<th>Possible causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symptoms</td>
<td></td>
<td></td>
</tr>
<tr>
<td>● Rear power indicator light is on</td>
<td></td>
<td>Sticky or defective power button.</td>
</tr>
<tr>
<td>● Will not turn on when power button is pressed</td>
<td></td>
<td></td>
</tr>
<tr>
<td>● Automatically powers on</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Troubleshooting steps

General actions

2. Perform a soft reset if system can turn on.

The sections below are intended for authorized service providers/technicians.

1. Disassemble the unit.
2. Inspect power button on the top cover and on the system board to make sure these buttons moves freely.
Additional information

The following sections provide additional information that can be used during the troubleshooting process.

Acronyms

The following acronyms are used in this chapter.

Blue screen (BSOD)—A Windows error screen that can occur if a problem causes your computer to shut down or restart unexpectedly. When you experience this type of error, you will not be able to see items such as the Start menu or the taskbar when your computer is turned on. Instead you might see a blue screen with a message that your computer ran into a problem and needs to restart.

CPU—Central processing unit

DIMM—Dual in-line memory module

Daughterboard—Type of circuit board that plugs into or is attached to the system board or similar expansion card to extend its features and services.

GPU—Graphics processor unit

GTS—General Troubleshooting Step

HDD—Hard drive

KB—Keyboard

LVDS—Low-Voltage Differential Signaling

MSG—Maintenance and Service Guide

mWS—Mobile Workstations

WS—Workstations

OS—Operating system

PC—Personal computer

POST—Power-On Self-Test

SSD—Solid-state drive

TSG—Troubleshooting Guide

UEFI—Unified Extensible Firmware Interface

WLAN—Wireless local area network

WWAN—Wireless wide area network
**Blinking lights and boot error codes**

In some cases, when the host processor is not executing code or does not have the necessary code to drive the display, light blink codes inform you of a problem.

**Table 6-7  Boot-error codes**

<table>
<thead>
<tr>
<th>Blink codes</th>
<th>Error</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amber battery light: blinks 1 Hz continuously</td>
<td>Embedded Controller unable to load firmware</td>
</tr>
<tr>
<td>Caps/num lock lights = 1 blink</td>
<td>Processor not executing code</td>
</tr>
<tr>
<td>Caps/num lock lights = 2 blinks</td>
<td>BIOS recovery code unable to find valid BIOS recovery image</td>
</tr>
<tr>
<td>Caps/num lock lights = 3 blinks</td>
<td>Memory module error</td>
</tr>
<tr>
<td>Caps/num lock lights = 4 blinks</td>
<td>Graphics controller error</td>
</tr>
<tr>
<td>Caps/num lock lights = 5 blinks</td>
<td>System board error</td>
</tr>
<tr>
<td>Caps/num lock lights = 6 blinks</td>
<td>Intel Trusted Execution Technology (TXT) Error</td>
</tr>
<tr>
<td>Caps/num lock lights = 7 blinks</td>
<td>Sure Start unable to find valid BIOS Boot Block image</td>
</tr>
<tr>
<td>Caps/num lock lights = 8 blinks</td>
<td>Sure Start has identified a problem (Manual Recovery Policy Set)</td>
</tr>
</tbody>
</table>

**Processor not executing code**

This computer has experienced a problem due to the failure of certain code to execute, resulting in a failed startup of the processor. The issue could be related to the processor or the system board in the computer. If the processor is socketed, be sure that the processor is seated correctly in the socket. If this error reoccurs, refer to [General troubleshooting steps on page 45](#).

**NOTE:** The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both **blink once** followed by a pause, and then continue in a repeating pattern.

**BIOS recovery code unable to find valid BIOS recovery image**

This computer has experienced a problem in locating a valid BIOS image, resulting in a failed startup. This problem may be resolved by placing a clean copy of the system BIOS on a USB key or in the appropriate hard drive directory and performing a reboot. If this error reoccurs, refer to [General troubleshooting steps on page 45](#).

**NOTE:** The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both **blink twice** followed by a pause, and then continue in a repeating pattern.

**Memory module error**

This computer has experienced a memory initialization problem resulting in a failed startup. This issue may be related to the memory modules in the computer. This problem may be resolved by ensuring that memory modules are correctly inserted and seated. If this error reoccurs, a service event is required to determine the source of the error (memory modules or system board) and take the appropriate corrective action.
NOTE: The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both blink three times followed by a pause, then continue in a repeating pattern.

Graphics Controller Error (No Controller)

This computer has experienced a graphics controller initialization problem resulting in a failed startup. This issue may be related to the graphics controller in your machine. This problem may be resolved by ensuring that the graphics controller module is seated correctly in machines with modular graphics. If this error reoccurs, a service event is required to identify the source of the error and take the appropriate corrective action.

NOTE: The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both blink four times followed by a pause, then continue in a repeating pattern.

Failure - System Board Error

This computer has experienced a system board initialization problem resulting in a failed startup. This issue may be related to the system board in the computer. A service event is required to identify the source of the error and take the appropriate corrective action.

NOTE: The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both blink five times followed by a pause, then continue in a repeating pattern.

Intel Trusted Execution Technology (TXT) Error

This computer has experienced a problem related to the Intel Trusted Execution Technology resulting in a failed startup. The error occurs when all of the following are true:

- The Intel Trusted Execution Technology (TXT) has been enabled on the computer.
- Policies have been set to prevent startup if the BIOS measurement has changed.
- The BIOS measurement has changed.

A service event is required to resolve this issue.

NOTE: The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both blink six times followed by a pause, then continue in a repeating pattern.

Sure Start unable to find valid BIOS Boot Block image

This computer has experienced a problem in locating a valid BIOS image, resulting in a failed startup. A service event is required to identify the source of the error and take appropriate corrective action.

NOTE: The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both blink seven times followed by a pause, then continue in a repeating pattern.

Sure Start has identified a problem (Manual Recovery Policy Set)

This computer has experienced a problem in locating a valid BIOS image, resulting in a failed startup. HP Sure Start will normally repair this type of issue; however, on this computer HP Sure Start has been configured to
operate in manual mode key sequence. To proceed with the repair, press and hold the following keys: `<ESC>` + `<UP arrow>` + `<DOWN arrow>`. To avoid the need for this manual recovery step, set the HP Sure Start recovery policy to automatic. If this error reoccurs, a service event is required to identify the source of the error and take appropriate corrective action.

**NOTE:** The computer will attempt to notify you of this problem through a series of blinking lights. When you attempt to turn on the computer from an “Off” or “Hibernated” state, lights associated with the caps lock and num lock keys will both **blink eight times** followed by a pause, then continue in a repeating pattern.

Common Blue Screen Error Messages

Error message list

The following image shows an example of one possible "https://msdn.microsoft.com/en-us/library/windows/hardware/hh994433(v=vs.85).aspx" from Microsoft:

![Blue Screen Error Message](https://msdn.microsoft.com/en-us/library/windows/hardware/hh994433(v=vs.85).aspx)

The hexadecimal number following the word "STOP" is called the bug check code or Stop code. This is the most important item on the screen.

Bug check symbolic names

Each bug check code also has an associated symbolic name. In the example, the screen shows https://msdn.microsoft.com/en-us/library/windows/hardware/ff559209(v=vs.85).aspx (MISMATCHED_HAL).
Microsoft general troubleshooting of Windows bug check codes

- If you recently added hardware to the system, try removing or replacing it. Or check with the manufacturer to see if any patches are available.
- Try running HP PC Hardware Diagnostics (UEFI).
- Check with the manufacturer to see if an updated system BIOS or firmware is available.
- Be sure that any expansion board is properly seated and all cables are completely connected.
- Confirm that any new hardware that is installed is compatible with the installed version of Windows.
- If new device drivers or system services have been added recently, try removing or updating them.

**NOTE:** Use safe mode when removing or disabling components. Safe mode loads only the minimum required drivers and system services during the Windows startup. To enter safe mode, restart your computer and press F8 at the menu that displays the operating system choices. At the resulting Windows Advanced Options menu, choose Safe Mode.

- Run a virus detection program. Viruses can infect all types of hard drives formatted for Windows, and resulting drive corruption can generate system bug check codes. Be sure that the virus detection program checks the Master Boot Record for infections.
- Verify that the system has the latest service pack installed. To detect which service pack, if any, is installed on your system, click Start, click Run, type winver, and then press Enter. The About Windows dialog box displays the Windows version number and the version number of the service pack, if one has been installed.
- Disable BIOS memory options such as caching or shadowing.
- Check the System Log and Application Log in Event Viewer to see if any additional error messages have been logged recently. These might pinpoint the cause of the error.

### Use Windows Debugging Tool

The [https://msdn.microsoft.com/library/windows/hardware/ff551063%20(v=vs.85).aspx](https://msdn.microsoft.com/library/windows/hardware/ff551063%20(v=vs.85).aspx) is one of the primary tools used by Microsoft software developers to analyze and resolve errors that result in memory dumps. Use the tool to determine the cause of the error. Follow general steps for downloading, setting up, and using the Windows 10 debugging tool. A similar process is used for Windows 7 or Windows 8.

**NOTE:** The following screen shots provide only an example of the tool. Specifics shown are not representative of all applications of the debugging tool. This is a Microsoft tool supported by Microsoft.
**Windows Software Development Kit (SDK)***

1. Download the SDK from the following link:
   

2. Set up the SDK in the configuration window (Windows 10 shown).

   ![Specify Location](image1)

3. Select features to install.

   ![Select the features you want to install](image2)
4. Run the SDK as an administrator.

5. Set the symbol path. Select **File > Symbol File Path**.
   - In the **Symbol path** box, type `SRV*C:\Windows\symbol_cache*http://msdl.microsoft.com/download/symbols`.
   - Save the workspace.
6. Open the crash dump file.
7. Analyze the file. In the following memory dump sample, look for Bug Check 0x3B. The ATIKMAG driver needs to be investigated for further root cause.

Lookup for Bug Check 0xC2.
Display Issue: Pixel Anomalies

All HP notebook displays adhere to strict quality and reliability specifications. A small percentage of display panels may have minor cosmetic manufacturing anomalies or irregularities such as bright or dark dots in the viewable area. These cosmetic imperfections are common to all display panel types and are not specific to any HP model or product line.

All display panel defects should be examined at the highest possible resolution using both the brightest and darkest possible backgrounds, because some sub-pixel failures may not be readily visible under certain conditions.

- Type 1: Bright dot on a dark background = Always On
- Type 2: Dark dot on a bright background = Always Off
- Combination = in any combination and any color that are always on or off

Use the HP PC Hardware Diagnostics (UEFI) tool to determine numbers of pixels and their distance. HP uses the following set of criteria when damaged displays are submitted for warranty coverage.

### Table 6-8 Electrical defect allowances

<table>
<thead>
<tr>
<th>Panel resolution</th>
<th>Accept</th>
<th>Reject</th>

</tbody>
</table>

**NOTE:** All LCD panel defects should be examined at the highest possible resolution using both the brightest and darkest possible backgrounds, as some sub-pixel failures may not be readily visible under certain conditions.

**NOTE:** Contact support for assistance if issues are not listed.
Cable management

Proper routing of the internal cables is critical to the operation of the computer. Follow good cable management practices when removing and installing components.

- Handle cables with care to avoid damage.
- Apply only the tension required to seat or unseat cables during insertion or removal from the connector.
- When possible, handle cables by the connector or pull-strap.
- Route cables in such a way that they cannot be caught or snagged by parts being removed or replaced.
- Keep cables away from direct contact with major heat sources, such as the heat sink. (Some air flow guides have a cable guide that lets you route cables safely around the heat sink.)
- Do not jam cables on top of daughterboards or memory modules (DIMMs). Circuit cards and DIMMs are not designed to take excessive pressure.
- Keep cables clear of any movable or rotating parts (such as a fan) to prevent them from being cut or crimped when the component is lowered into its normal position.
- In all cases, avoid bending or twisting the cables. Do not bend any cable sharply. A sharp bend can break the internal wires.
- Do not rely on components like the keyboard or service door to push cables down internally. Always position the cables to lay properly by themselves or in the cable guides and chassis areas designed for cable routing.

⚠️ **CAUTION:** Always release connector latch before removing the cable. Otherwise, pulling the cable could damage the cable pins and result in a failed device.
## Connector types

### IMPORTANT:
Connector pins and connector gold fingers should not be touched directly with bare hands.

There are several different types of connectors on the system board with different requirements for cable removal or insertion.

#### Flex cable

When connecting flex cables to a ZIF connector, rotate the latch to 90 degrees, push the cable completely, evenly into the connector, and then close the latch.

When removing flex cables from a ZIF connector on the system board, the latch must be released before the cable can be removed. Always follow these steps:

1. Flip the connector latch 90 degrees to release the cable.
2. Grasp the cable end of the connector and pull it straight out.

⚠️ **CAUTION:** Always release connector latch before removing the cable. Otherwise, pulling the cable could damage the cable pins and result in a failed device.

---

#### Horizontal installation cable

Use flat tool to pull connector evenly. Do not pull on cable to remove.

Slide connector into receptacle on same horizontal plane as board and use flat tool to push evenly into receptacle.

---

#### Multi-pin horizontal insert connector (LVDS cable to display panel)

Insert procedure:
1. Slide connector evenly into receptacle on same horizontal plane as PCB connector.
2. Pull lock bar to insert and push both side connector horizontally to firmly lock.
3. Tape down lock bar over the panel to hold in position.

Reverse the procedure above to remove the connector:
1. Remove tape.
2. Pull up bar (pull tape) and release the lock with the PCB connector.
3. Pull to the direction in parallel with PCB to withdraw the connector.

Multi-pin vertical insert connector (LVDS cable to system board)
- Remove the connector gasket prior to removing the connector.
- If the connector has a plastic pull tab, use the tab to disconnect. Otherwise, use flat tool under the connector to remove evenly. Do not pull on the cable to remove.
- Press evenly when reseating/reconnecting/installing the connector.

For more information about cable management, see Cable management on page 116.
Using Computer Setup

Computer Setup, or Basic Input/Output System (BIOS), controls communication between all the input and output devices on the system (such as disk drives, display, keyboard, mouse, and printer). Computer Setup includes settings for the types of devices installed, the startup sequence of the computer, and the amount of system and extended memory.

**NOTE:** Use extreme care when making changes in Computer Setup. Errors can prevent the computer from operating properly.

Starting Computer Setup

▲ Turn on or restart the computer, and when the HP logo appears, press **f10** to enter Computer Setup.

Using a USB keyboard or USB mouse to start Computer Setup (BIOS)

You can start Computer Setup by using a keyboard or mouse connected to a USB port, but you must first disable FastBoot.

1. Turn on or restart the computer, and when the HP logo appears, press **f9** to enter the Boot Device Options menu.
2. Clear the check box for **Fast Boot**.
3. To save your changes and exit, select the **Save** icon in the lower-right corner of the screen, and then follow the on-screen instructions.
   
   or –

   Select **Main**, select **Save Changes and Exit**, and then press **enter**.

Your changes go into effect when the computer restarts.

Navigating and selecting in Computer Setup

- To select a menu or a menu item, use the **tab** key and the keyboard arrow keys and then press **enter**, or use a pointing device to select the item.
- To scroll up and down, select the up arrow or the down arrow in the upper-right corner of the screen, or use the up arrow key or the down arrow key on the keyboard.
- To close open dialog boxes and return to the main Computer Setup screen, press **esc**, and then follow the on-screen instructions.
To exit Computer Setup menus, choose one of the following methods:

- To exit Computer Setup menus without saving your changes:
  Select the Exit icon in the lower-right corner of the screen, and then follow the on-screen instructions.
  – or –
  Select Main, select Ignore Changes and Exit, and then press enter.

- To save your changes and exit Computer Setup menus:
  Select the Save icon in the lower-right corner of the screen, and then follow the on-screen instructions.
  – or –
  Select Main, select Save Changes and Exit, and then press enter.

Your changes go into effect when the computer restarts.

**Restoring factory settings in Computer Setup**

<table>
<thead>
<tr>
<th>NOTE:</th>
<th>Restoring defaults will not change the hard drive mode.</th>
</tr>
</thead>
</table>

To return all settings in Computer Setup to the values that were set at the factory, follow these steps:

2. Select Main, and then select Apply Factory Defaults and Exit.
   
<table>
<thead>
<tr>
<th>NOTE:</th>
<th>On select products, the selections may display Restore Defaults instead of Apply Factory Defaults and Exit.</th>
</tr>
</thead>
</table>
3. Follow the on-screen instructions.
4. To save your changes and exit, select the Save icon in the lower-right corner of the screen, and then follow the on-screen instructions.
   – or –
   Select Main, select Save Changes and Exit, and then press enter.

Your changes go into effect when the computer restarts.

<table>
<thead>
<tr>
<th>NOTE:</th>
<th>Your password settings and security settings are not changed when you restore the factory settings.</th>
</tr>
</thead>
</table>

**Updating the BIOS**

Updated versions of the BIOS may be available on the HP website.

Most BIOS updates on the HP website are packaged in compressed files called SoftPaqs.

Some download packages contain a file named Readme.txt, which contains information regarding installing and troubleshooting the file.

**Determining the BIOS version**

To decide whether you need to update Computer Setup (BIOS), first determine the BIOS version on your computer.

BIOS version information (also known as ROM date and System BIOS) can be accessed by pressing fn+esc (if you are already in Windows) or by using Computer Setup.
2. Select Main, and then select System Information.
3. To exit Computer Setup without saving your changes, select the Exit icon in the lower-right corner of the screen, and then follow the on-screen instructions.
   – or –
   Select Main, select Ignore Changes and Exit, and then press enter.

To check for later BIOS versions, see Downloading a BIOS update on page 121.

** Downloading a BIOS update**

⚠️ **CAUTION:** To reduce the risk of damage to the computer or an unsuccessful installation, download and install a BIOS update only when the computer is connected to reliable external power using the AC adapter. Do not download or install a BIOS update while the computer is running on battery power, docked in an optional docking device, or connected to an optional power source. During the download and installation, follow these instructions:

Do not disconnect power on the computer by unplugging the power cord from the AC outlet.
Do not shut down the computer or initiate Sleep.
Do not insert, remove, connect, or disconnect any device, cable, or cord.

1. Type support in the taskbar search box, and then select the HP Support Assistant app.
   – or –
   Select the question mark icon in the taskbar.
2. Select Updates, and then select Check for updates and messages.
3. Follow the on-screen instructions.
4. At the download area, follow these steps:
   a. Identify the most recent BIOS update and compare it to the BIOS version currently installed on your computer. Make a note of the date, name, or other identifier. You may need this information to locate the update later, after it has been downloaded to your hard drive.
   b. Follow the on-screen instructions to download your selection to the hard drive.
   Make a note of the path to the location on your hard drive where the BIOS update is downloaded. You will need to access this path when you are ready to install the update.

⚠️ **NOTE:** If you connect your computer to a network, consult the network administrator before installing any software updates, especially system BIOS updates.

BIOS installation procedures vary. Follow any instructions that are displayed on the screen after the download is complete. If no instructions are displayed, follow these steps:

1. Type file in the taskbar search box, and then select File Explorer.
2. Select your hard drive designation. The hard drive designation is typically Local Disk (C:).
3. Using the hard drive path you recorded earlier, open the folder that contains the update.
4. Double-click the file that has an .exe extension (for example, filename.exe).
   The BIOS installation begins.
5. Complete the installation by following the on-screen instructions.
NOTE: After a message on the screen reports a successful installation, you can delete the downloaded file from your hard drive.

Changing the boot order using the f9 prompt

To dynamically choose a boot device for the current startup sequence, follow these steps:

1. Access the Boot Device Options menu:
   - Turn on or restart the computer, and when the HP logo appears, press f9 to enter the Boot Device Options menu.

2. Select a boot device, press enter, and then follow the on-screen instructions.

TPM BIOS settings (select products only)

IMPORTANT: Before enabling Trusted Platform Module (TPM) functionality on this system, you must ensure that your intended use of TPM complies with relevant local laws, regulations and policies, and approvals or licenses must be obtained if applicable. For any compliance issues arising from your operation/usage of TPM which violates the above mentioned requirement, you shall bear all the liabilities wholly and solely. HP will not be responsible for any related liabilities.

TPM provides additional security for your computer. You can modify the TPM settings in Computer Setup (BIOS).

NOTE: If you change the TPM setting to Hidden, TPM is not visible in the operating system.

To access TPM settings in Computer Setup:

2. Select Security, select TPM Embedded Security, and then follow the on-screen instructions.

Using HP Sure Start (select products only)

Select computer models are configured with HP Sure Start, a technology that monitors the computer’s BIOS for attacks or corruption. If the BIOS becomes corrupted or is attacked, HP Sure Start automatically restores the BIOS to its previously safe state, without user intervention.

HP Sure Start is configured and already enabled so that most users can use the HP Sure Start default configuration. The default configuration can be customized by advanced users.

To access the latest documentation on HP Sure Start, go to http://www.hp.com/support. Select Find your product, and then follow the on-screen instructions.
8 Backing up, restoring, and recovering

This chapter provides information about the following processes. The information in the chapter is standard procedure for most products.

- Creating recovery media and backups
- Restoring and recovering your system

For additional information, refer to the HP Support Assistant app.

▲ Type support in the taskbar search box, and then select the HP Support Assistant app.

– or –

Select the question mark icon in the taskbar.

⚠️ IMPORTANT: If you will be performing recovery procedures on a tablet, the tablet battery must be at least 70% charged before you start the recovery process.

⚠️ IMPORTANT: For a tablet with a detachable keyboard, connect the tablet to the keyboard base before beginning any recovery process.

Creating recovery media and backups

The following methods of creating recovery media and backups are available on select products only. Choose the available method according to your computer model.

- Use HP Recovery Manager to create HP Recovery media after you successfully set up the computer. This step creates a backup of the HP Recovery partition on the computer. The backup can be used to reinstall the original operating system in cases where the hard drive is corrupted or has been replaced. For information on creating recovery media, see Using HP Recovery media (select products only) on page 123. For information on the recovery options that are available using the recovery media, see Using Windows tools on page 124.

- Use Windows tools to create system restore points and create backups of personal information. See Using Windows tools on page 124.

⚠️ NOTE: If storage is 32 GB or less, Microsoft System Restore is disabled by default.

- On select products, use the HP Cloud Recovery Download Tool to create a bootable USB flash drive for your HP recovery media. For more information, see Using the HP Cloud Recovery Download Tool (select products only) on page 125.

Using HP Recovery media (select products only)

If possible, check for the presence of the Recovery partition and the Windows partition. Right-click the Start button, select File Explorer, and then select This PC.

- If your computer does not list the Windows partition and the Recovery partition, you can obtain recovery media for your system from support. You can find contact information on the HP website. Go to http://www.hp.com/support, select your country or region, and follow the on-screen instructions.

- If your computer does list the Recovery partition and the Windows partition, you can use HP Recovery Manager to create recovery media after you successfully set up the computer. HP Recovery media can be
used to perform system recovery if the hard drive becomes corrupted. System recovery reinstalls the original operating system and software programs that were installed at the factory and then configures the settings for the programs. HP Recovery media can also be used to customize the system or restore the factory image if you replace the hard drive.

– Only one set of recovery media can be created. Handle these recovery tools carefully, and keep them in a safe place.

– HP Recovery Manager examines the computer and determines the required storage capacity for the media that will be required.

– To create recovery discs, your computer must have an optical drive with DVD writer capability, and you must use only high-quality blank DVD-R, DVD+R, DVD-R DL, or DVD+R DL discs. Do not use rewritable discs such as CD±RW, DVD±RW, double-layer DVD±RW, or BD-RE (rewritable Blu-ray) discs; they are not compatible with HP Recovery Manager software. Or, instead, you can use a high-quality blank USB flash drive.

– If your computer does not include an integrated optical drive with DVD writer capability, but you would like to create DVD recovery media, you can use an external optical drive (purchased separately) to create recovery discs. If you use an external optical drive, it must be connected directly to a USB port on the computer; the drive cannot be connected to a USB port on an external device, such as a USB hub. If you cannot create DVD media yourself, you can obtain recovery discs for your computer from HP. You can find contact information on the HP website. Go to http://www.hp.com/support, select your country or region, and follow the on-screen instructions.

– Be sure that the computer is connected to AC power before you begin creating the recovery media.

– The creation process can take an hour or more. Do not interrupt the creation process.

– If necessary, you can exit the program before you have finished creating all of the recovery DVDs. HP Recovery Manager will finish burning the current DVD. The next time you start HP Recovery Manager, you will be prompted to continue.

To create HP Recovery media using HP recovery manager:

**IMPORTANT:** For a tablet with a detachable keyboard, connect the tablet to the keyboard base before beginning these steps.

1. Type recovery in the taskbar search box, and then select HP Recovery Manager.

2. Select Create recovery media, and then follow the on-screen instructions.

If you ever need to recover the system, see Recovering using HP Recovery Manager on page 125.

Using Windows tools

You can create recovery media, system restore points, and backups of personal information using Windows tools.

**NOTE:** If storage is 32 GB or less, Microsoft System Restore is disabled by default.

For more information and steps, see the Get Help app.

▲ Select the Start button, and then select the Get Help app.

**NOTE:** You must be connected to the Internet to access the Get Help app.
Using the HP Cloud Recovery Download Tool (select products only)

To create HP Recovery media using the HP Cloud Recovery Download Tool:

2. Select Software and Drivers, and then follow the on-screen instructions.

 Restore and recovery

There are several options for recovering your system. Choose the method that best matches your situation and level of expertise:

**IMPORTANT:** Not all methods are available on all products.

- Windows offers several options for restoring from backup, refreshing the computer, and resetting the computer to its original state. For more information see the Get Help app.
  
  ▲ Select the Start button, and then select the Get Help app.

**NOTE:** You must be connected to the Internet to access the Get Help app.

- If you need to correct a problem with a preinstalled application or driver, use the Reinstall drivers and/or applications option (select products only) of HP Recovery Manager to reinstall the individual application or driver.
  
  ▲ Type recovery in the taskbar search box, select HP Recovery Manager, select Reinstall drivers and/or applications, and then follow the on-screen instructions.

- If you want to recover the Windows partition to original factory content, you can choose the System Recovery option from the HP Recovery partition (select products only) or use the HP Recovery media. For more information, see Recovering using HP Recovery Manager on page 125. If you have not already created recovery media, see Using HP Recovery media (select products only) on page 123.

- On select products, if you want to recover the computer's original factory partition and content, or if you have replaced the hard drive, you can use the Factory Reset option of HP Recovery media. For more information, see Recovering using HP Recovery Manager on page 125.

- On select products, if you want to remove the Recovery partition to reclaim hard drive space, HP Recovery Manager offers the Remove Recovery Partition option.

  For more information, see Removing the HP Recovery partition (select products only) on page 127.

Recovering using HP Recovery Manager

HP Recovery Manager software allows you to recover the computer to its original factory state by using the HP Recovery media that you either created or that you obtained from HP, or by using the HP Recovery partition (select products only). If you have not already created recovery media, see Using HP Recovery media (select products only) on page 123.

What you need to know before you get started

- HP Recovery Manager recovers only software that was installed at the factory. For software not provided with this computer, you must either download the software from the manufacturer’s website or reinstall the software from the media provided by the manufacturer.
IMPORTANT: Recovery through HP Recovery Manager should be used as a final attempt to correct computer issues.

- HP Recovery media must be used if the computer hard drive fails. If you have not already created recovery media, see Using HP Recovery media (select products only) on page 123.

- To use the Factory Reset option (select products only), you must use HP Recovery media. If you have not already created recovery media, see Using HP Recovery media (select products only) on page 123.

- If your computer does not allow the creation of HP Recovery media or if the HP Recovery media does not work, you can obtain recovery media for your system from support. You can find contact information from the HP website. Go to http://www.hp.com/support, select your country or region, and follow the on-screen instructions.

IMPORTANT: HP Recovery Manager does not automatically provide backups of your personal data. Before beginning recovery, back up any personal data you want to retain.

Using HP Recovery media, you can choose from one of the following recovery options:

NOTE: Only the options available for your computer display when you start the recovery process.

- System Recovery—Reinstalls the original operating system, and then configures the settings for the programs that were installed at the factory.

- Factory Reset—Restores the computer to its original factory state by deleting all information from the hard drive and re-creating the partitions. Then it reinstalls the operating system and the software that was installed at the factory.

The HP Recovery partition (select products only) allows System Recovery only.

Using the HP Recovery partition (select products only)

The HP Recovery partition allows you to perform a system recovery without the need for recovery discs or a recovery USB flash drive. This type of recovery can be used only if the hard drive is still working.

To start HP Recovery Manager from the HP Recovery partition:

IMPORTANT: For a tablet with a detachable keyboard, connect the tablet to the keyboard base before beginning these steps (select products only).

1. Type recovery in the taskbar search box, select HP Recovery Manager, and then select Windows Recovery Environment.
   - or –
   For computers or tablets with keyboards attached, press f11 while the computer boots, or press and hold f11 as you press the power button.

   For tablets without keyboards:
   - Turn on or restart the tablet, and then quickly hold down the volume up button; then select f11.
   - or –
   - Turn on or restart the tablet, and then quickly hold down the volume down button; then select f11.

2. Select Troubleshoot from the boot options menu.

3. Select Recovery Manager, and then follow the on-screen instructions.
Using HP Recovery media to recover

You can use HP Recovery media to recover the original system. This method can be used if your system does not have an HP Recovery partition or if the hard drive is not working properly.

1. If possible, back up all personal files.
2. Insert the HP Recovery media, and then restart the computer.

   **NOTE:** If the computer does not automatically restart in HP Recovery Manager, change the computer boot order. See Changing the computer boot order on page 127.

3. Follow the on-screen instructions.

Changing the computer boot order

If your computer does not restart in HP Recovery Manager, you can change the computer boot order, which is the order of devices listed in BIOS where the computer looks for startup information. You can change the selection to an optical drive or a USB flash drive.

To change the boot order:

   **IMPORTANT:** For a tablet with a detachable keyboard, connect the tablet to the keyboard base before beginning these steps.

1. Insert the HP Recovery media.
2. Access the system **Startup** menu.
   
   For computers or tablets with keyboards attached:
   
   ▲ Turn on or restart the computer or tablet, quickly press `esc`, and then press `f9` for boot options.
   
   For tablets without keyboards:
   
   ▲ Turn on or restart the tablet, and then quickly hold down the volume up button; then select `f9`.
   
   − or −
   
   Turn on or restart the tablet, and then quickly hold down the volume down button; then select `f9`.

3. Select the optical drive or USB flash drive from which you want to boot.
4. Follow the on-screen instructions.

Removing the HP Recovery partition (select products only)

HP Recovery Manager software allows you to remove the HP Recovery partition to free up hard drive space.

   **IMPORTANT:** After you remove the HP Recovery partition, you will not be able to perform System Recovery or create HP Recovery media from the HP Recovery partition. So before you remove the Recovery partition, create HP Recovery media; see Using HP Recovery media (select products only) on page 123.

   **NOTE:** The Remove Recovery Partition option is only available on products that support this function.

Follow these steps to remove the HP Recovery partition:

1. Type `recovery` in the taskbar search box, and then select **HP Recovery Manager**.
2. Select **Remove Recovery Partition**, and then follow the on-screen instructions.
Using HP PC Hardware Diagnostics Windows (select products only)

HP PC Hardware Diagnostics Windows is a Windows-based utility that allows you to run diagnostic tests to determine whether the computer hardware is functioning properly. The tool runs within the Windows operating system in order to diagnose hardware failures.

If HP PC Hardware Diagnostics Windows is not installed on your computer, first you must download and install it. To download HP PC Hardware Diagnostics Windows, see Downloading HP PC Hardware Diagnostics Windows on page 128.

After HP PC Hardware Diagnostics Windows is installed, follow these steps to access it from HP Help and Support or HP Support Assistant.

1. To access HP PC Hardware Diagnostics Windows from HP Help and Support:
   a. Select the Start button, and then select HP Help and Support.
   b. Right-click HP PC Hardware Diagnostics Windows, select More, and then select Run as administrator.
   – or –
   To access HP PC Hardware Diagnostics Windows from HP Support Assistant:
   a. Type support in the taskbar search box, and then select the HP Support Assistant app.
   – or –
   Select the question mark icon in the taskbar.
   b. Select Troubleshooting and fixes.
   c. Select Diagnostics, and then select HP PC Hardware Diagnostics Windows.

2. When the tool opens, select the type of diagnostic test you want to run, and then follow the on-screen instructions.

   **NOTE:** If you need to stop a diagnostic test at any time, select Cancel.

3. When HP PC Hardware Diagnostics Windows detects a failure that requires hardware replacement, a 24-digit Failure ID code is generated. For assistance in correcting the problem, contact support, and then provide the Failure ID code.

**Downloading HP PC Hardware Diagnostics Windows**

- The HP PC Hardware Diagnostics Windows download instructions are provided in English only.
- You must use a Windows computer to download this tool because only .exe files are provided.

**Downloading the latest HP PC Hardware Diagnostics Windows version**

To download HP PC Hardware Diagnostics Windows, follow these steps:

2. In the HP PC Hardware Diagnostics section, select Download, and then select a location on your computer or a USB flash drive.
The tool is downloaded to the selected location.

**Downloading HP Hardware Diagnostics Windows by product name or number (select products only)**

⚠️ **NOTE:** For some products, it may be necessary to download the software to a USB flash drive by using the product name or number.

To download HP PC Hardware Diagnostics Windows by product name or number, follow these steps:

2. Select **Get software and drivers**, select your type of product, and then enter the product name or number in the search box that is displayed.
3. In the **HP PC Hardware Diagnostics** section, select **Download**, and then select a location on your computer or a USB flash drive.

The tool is downloaded to the selected location.

**Installing HP PC Hardware Diagnostics Windows**

To install HP PC Hardware Diagnostics Windows, follow these steps:

▲ Navigate to the folder on your computer or the flash drive where the .exe file was downloaded, double-click the .exe file, and then follow the on-screen instructions.

**Using HP PC Hardware Diagnostics UEFI**

⚠️ **NOTE:** For Windows 10 S computers, you must use a Windows computer and a USB flash drive to download and create the HP UEFI support environment because only .exe files are provided. For more information, see [Downloading HP PC Hardware Diagnostics UEFI to a USB flash drive on page 130](#). lokalizacja

HP PC Hardware Diagnostics UEFI (Unified Extensible Firmware Interface) allows you to run diagnostic tests to determine whether the computer hardware is functioning properly. The tool runs outside the operating system so that it can isolate hardware failures from issues that are caused by the operating system or other software components.

If your PC will not boot into Windows, you can use HP PC Hardware Diagnostics UEFI to diagnose hardware issues.

When HP PC Hardware Diagnostics UEFI detects a failure that requires hardware replacement, a 24-digit Failure ID code is generated. For assistance in correcting the problem, contact support, and provide the Failure ID code.

⚠️ **NOTE:** To start diagnostics on a convertible computer, your computer must be in notebook mode, and you must use the attached keyboard.

⚠️ **NOTE:** If you need to stop a diagnostic test, press **esc**.

**Starting HP PC Hardware Diagnostics UEFI**

To start HP PC Hardware Diagnostics UEFI, follow these steps:

1. Turn on or restart the computer, and quickly press **esc**.
2. Press **f2**.

The BIOS searches three places for the diagnostic tools, in the following order:

a. Connected USB flash drive
To download the HP PC Hardware Diagnostics UEFI tool to a USB flash drive, see Downloading the latest HP PC Hardware Diagnostics UEFI version on page 130.

b. Hard drive
c. BIOS

3. When the diagnostic tool opens, select the type of diagnostic test you want to run, and then follow the on-screen instructions.

**Downloading HP PC Hardware Diagnostics UEFI to a USB flash drive**

Downloading HP PC Hardware Diagnostics UEFI to a USB flash drive can be useful in the following situations:

- HP PC Hardware Diagnostics UEFI is not included in the preinstall image.
- HP PC Hardware Diagnostics UEFI is not included in the HP Tool partition.
- The hard drive is damaged.

**NOTE:** The HP PC Hardware Diagnostics UEFI download instructions are provided in English only, and you must use a Windows computer to download and create the HP UEFI support environment because only .exe files are provided.

**Downloading the latest HP PC Hardware Diagnostics UEFI version**

To download the latest HP PC Hardware Diagnostics UEFI version to a USB flash drive:

2. In the **HP PC Hardware Diagnostics UEFI** section, select **Download UEFI Diagnostics**, and then select **Run**.

**Downloading HP PC Hardware Diagnostics UEFI by product name or number (select products only)**

**NOTE:** For some products, it may be necessary to download the software to a USB flash drive by using the product name or number.

To download HP PC Hardware Diagnostics UEFI by product name or number (select products only) to a USB flash drive:

2. Enter the product name or number, select your computer, and then select your operating system.
3. In the **Diagnostics** section, follow the on-screen instructions to select and download the specific UEFI Diagnostics version for your computer.

**Using Remote HP PC Hardware Diagnostics UEFI settings (select products only)**

Remote HP PC Hardware Diagnostics UEFI is a firmware (BIOS) feature that downloads HP PC Hardware Diagnostics UEFI to your computer. It can then execute the diagnostics on your computer, and it may upload results to a preconfigured server. For more information on Remote HP PC Hardware Diagnostics UEFI, go to [http://www.hp.com/go/techcenter/pcdiags](http://www.hp.com/go/techcenter/pcdiags), and then select **Find out more**.
Downloading Remote HP PC Hardware Diagnostics UEFI

NOTE: HP Remote PC Hardware Diagnostics UEFI is also available as a Softpaq that can be downloaded to a server.

Downloading the latest Remote HP PC Hardware Diagnostics UEFI version

To download the latest Remote HP PC Hardware Diagnostics UEFI version, follow these steps:

2. In the HP PC Hardware Diagnostics UEFI section, select Download Remote Diagnostics, and then select Run.

Downloading Remote HP PC Hardware Diagnostics UEFI by product name or number

NOTE: For some products, it may be necessary to download the software by using the product name or number.

To download HP Remote PC Hardware Diagnostics UEFI by product name or number, follow these steps:

2. Select Get software and drivers, select your type of product, enter the product name or number in the search box that is displayed, select your computer, and then select your operating system.
3. In the Diagnostics section, follow the on-screen instructions to select and download the Remote UEFI version for the product.

Customizing Remote HP PC Hardware Diagnostics UEFI settings

Using the Remote HP PC Hardware Diagnostics setting in Computer Setup (BIOS), you can perform the following customizations:

- Set a schedule for running diagnostics unattended. You can also start diagnostics immediately in interactive mode by selecting Execute Remote HP PC Hardware Diagnostics.
- Set the location for downloading the diagnostic tools. This feature provides access to the tools from the HP website or from a server that has been preconfigured for use. Your computer does not require the traditional local storage (such as a disk drive or USB flash drive) to run remote diagnostics.
- Set a location for storing the test results. You can also set the user name and password settings used for uploads.
- Display status information about the diagnostics run previously.

To customize Remote HP PC Hardware Diagnostics UEFI settings, follow these steps:

1. Turn on or restart the computer, and when the HP logo appears, press f10 to enter Computer Setup.
2. Select Advanced, and then select Settings.
3. Make your customization selections.
4. Select Main, and then Save Changes and Exit to save your settings.

Your changes take effect when the computer restarts.

*Size refers to hard drive storage capacity. Actual accessible capacity is less. Actual drive specifications may differ slightly.

**NOTE:** Certain restrictions and exclusions apply. Contact support for details.
Power cord set requirements

The wide-range input feature of the computer permits it to operate from any line voltage from 100 to 120 V ac, or from 220 to 240 V ac.

The 3-conductor power cord set included with the computer meets the requirements for use in the country or region where the equipment is purchased.

Power cord sets for use in other countries or regions must meet the requirements of the country and region where the computer is used.

Requirements for all countries

The following requirements are applicable to all countries and regions:

- The length of the power cord set must be at least \( 1.0 \text{ m} \) (3.3 ft) and no more than \( 2.0 \text{ m} \) (6.5 ft).
- All power cord sets must be approved by an acceptable accredited agency responsible for evaluation in the country or region where the power cord set will be used.
- The power cord sets must have a minimum current capacity of 10 A and a nominal voltage rating of 125 or 250 V ac, as required by the power system of each country or region.
- The appliance coupler must meet the mechanical configuration of an EN 60 320/IEC 320 Standard Sheet C13 connector for mating with the appliance inlet on the back of the computer.

</table>
The purpose of this chapter is to provide general information regarding nonvolatile memory in HP Business computers. This chapter also provides general instructions for restoring nonvolatile memory that can contain personal data after the system has been powered off and the hard drive has been removed.

HP Business computer products that use Intel®-based or AMD®-based system boards contain volatile DDR memory. The amount of nonvolatile memory present in the system depends upon the system configuration.

Intel-based and AMD-based system boards contain nonvolatile memory subcomponents as originally shipped from HP, assuming that no subsequent modifications have been made to the system and assuming that no applications, features, or functionality have been added to or installed on the system.

Following system shutdown and removal of all power sources from an HP Business computer system, personal data can remain on volatile system memory (DIMMs) for a finite period of time and will also remain in nonvolatile memory. Use the steps below to remove personal data from the computer, including the nonvolatile memory found in Intel-based and AMD-based system boards.

**NOTE:** If your tablet has a keyboard base, connect to the keyboard base before beginning steps in this chapter.

### Current BIOS steps

1. Follow steps (a) through (l) below to restore the nonvolatile memory that can contain personal data. Restoring or reprogramming nonvolatile memory that does not store personal data is neither necessary nor recommended.

   a. Turn on or restart the computer, and then quickly press **esc**.
      
      **NOTE:** You may need to press **F10** after pressing the **ESC** key.
      
      **NOTE:** If the system has a BIOS administrator password, enter the password at the prompt.
      
   b. Select **Main**, select **Apply Factory Defaults and Exit**, and then select **Yes** to load defaults.
      
      The computer will reboot.
      
   c. During the reboot, press **esc** while the “Press the ESC key for Startup Menu” message is displayed at the bottom of the screen.
      
      **NOTE:** You may need to press **F10** after pressing the **ESC** key.
      
      **NOTE:** If the system has a BIOS administrator password, enter the password at the prompt.
      
   d. Select the **Security** menu, select **Restore Security Settings to Factory Defaults**, and then select **Yes** to restore security level defaults.
      
      **NOTE:** If the system has a Trusted Platform Module (TPM) and/or fingerprint reader, one or two prompts will appear --one to clear the TPM and the other to Reset Fingerprint Sensor; press or tap **F1** to accept or **F2** to reject.
      
      The computer will reboot.
      
   e. During the reboot, press **esc** while the “Press the ESC key for Startup Menu” message is displayed at the bottom of the screen.

      **NOTE:** You may need to press **F10** after pressing the **ESC** key.
f. If an asset or ownership tag is set, select Main, select System IDs, and then select Asset Tracking Number. Clear the tag, and then make the selection to return to the prior menu.

g. If a DriveLock password is set, select the Security menu, and scroll down to Hard Drive Utilities under the Utilities menu. Select Hard Drive Utilities, select DriveLock, then uncheck the checkbox for DriveLock password on restart. Select OK to proceed.

NOTE: Unchecking the checkbox for DriveLock password on restart only disables the prompt on a warm boot. To disable the prompt on a cold boot, you must disable the DriveLock password using the DriveLock/Automatic DriveLock option.

h. Select the Security menu, and then select Reset BIOS Security to factory default: Click Yes at the warning message.

The computer will reboot.

i. During the reboot, press esc while the “Press the ESC key for Startup Menu” message is displayed at the bottom of the screen.

NOTE: You may need to press F10 after pressing the ESC key.

NOTE: If the system has a BIOS administrator password, enter the password at the prompt.

j. Select the Main menu, select Apply Factory Defaults and Exit, select Yes to save changes and exit, and then select Shutdown.

NOTE: To clear the TPM or fingerprint settings, you must select the Restore Security Settings to Factory Defaults option.

k. Reboot the system. If the system has a Trusted Platform Module (TPM) and/or fingerprint reader, one or two prompts will appear—one to clear the TPM and the other to Reset Fingerprint Sensor; press or tap F1 to accept or F2 to reject.

l. Remove all power and system batteries for at least 24 hours.

2. Complete one of the following:

   ● Remove and retain the storage drive.

   — or —

   ● Clear the drive contents by using a third party utility designed to erase data from an SSD.

   — or —

   ● Clear the contents of the drive by using the following BIOS Setup Secure Erase command option steps:

   IMPORTANT: If you clear data using Secure Erase, it cannot be recovered.

   a. Turn on or restart the computer, and then quickly press esc.

   NOTE: You may need to press F10 after pressing the ESC key.

   b. Select the Security menu and scroll down to the Utilities menu.

   c. Select Hard Drive Utilities.

   d. Select Secure Erase, select the hard drive storing the data you want to clear, and then follow the on-screen instructions to continue.

<td>Intel Management Engine Firmware (present only in select Elite or Z models. For more information, go to <a href="http://www.hp.com/support">http://www.hp.com/support</a>; Select Find your product and then follow the on-screen instructions.)</td>
<td>1.5 MBytes or 7 MBytes</td>
<td>Yes</td>
<td>Yes</td>
<td>Stores Management Engine Code, Settings, Provisioning Data and iAMT third-party data store.</td>
<td>Management Engine Code is programmed at the factory. Code is updated via Intel secure firmware update utility. Unique Provisioning Data can be entered at the factory or by an administrator using the Management Engine (MEBx) setup utility. The third party data store contents can be populated by a remote management console or local applications that have been registered by an administrator to have access to the space.</td>
<td>The Intel chipset is configured to enforce hardware protection to block all direct read/write access to this area. An Intel utility is required for updating the firmware. Only firmware updates digitally signed by Intel can be applied using this utility.</td>
</tr>
<tr>
<td>Bluetooth flash (select products only)</td>
<td>2 Mbit</td>
<td>No</td>
<td>Yes</td>
<td>Stores Bluetooth configuration and firmware.</td>
<td>Bluetooth flash is programmed at the factory. Tools for writing data to this memory are not publicly available but can be obtained from the silicon vendor.</td>
<td>A utility is required for writing data to this memory and is made available through newer versions of the driver whenever the flash requires an upgrade.</td>
</tr>
<tr>
<td>802.11 WLAN EEPROM</td>
<td>4 Kbit to 8 Kbit</td>
<td>No</td>
<td>Yes</td>
<td>Stores configuration and calibration data.</td>
<td>802.11 WLAN EEPROM is programmed at the factory. Tools for writing data to this memory are not made public.</td>
<td>A utility is required for writing data to this memory and is not made available to the public unless a firmware upgrade is necessary to address a unique issue.</td>
</tr>
<tr>
<td>Webcam (select products only)</td>
<td>64 Kbit</td>
<td>No</td>
<td>Yes</td>
<td>Stores webcam configuration and firmware.</td>
<td>Webcam memory is programmed using a utility from the device manufacturer that can be run from Windows.</td>
<td>A utility is required for writing data to this memory and is not made available to the public unless a firmware upgrade is necessary to address a unique issue.</td>
</tr>
<tr>
<td>Fingerprint reader (select products only)</td>
<td>512 KByte flash</td>
<td>Yes</td>
<td>Yes</td>
<td>Stores fingerprint templates.</td>
<td>Fingerprint reader memory is programmed by user enrollment in HP ProtectTools Security Manager.</td>
<td>Only a digitally signed application can make the call to write to the flash.</td>
</tr>

</table>
Questions and answers

1. **How can the BIOS settings be restored (returned to factory settings)?**

   *IMPORTANT:* Restore defaults does not securely erase any data on your hard drive. See question and answer 6 for steps to securely erase data.

   Restore defaults does not reset the Custom Secure Boot keys. See question and answer 7 for information about resetting the keys.

   a. Turn on or restart the computer, and then quickly press `esc`.

   b. Select Security, and then select Apply Factory Defaults and Exit.

   c. Follow the on-screen instructions.

   d. Select Main, select Save Changes and Exit, and then follow the on-screen instructions.

2. **What is a UEFI BIOS, and how is it different from a legacy BIOS?**

   The Unified Extensible Firmware Interface (UEFI) BIOS is an industry-standard software interface between the platform firmware and an operating system (OS). It is a replacement for the older BIOS architecture, but supports much of the legacy BIOS functionality.

   Like the legacy BIOS, the UEFI BIOS provides an interface to display the system information and configuration settings and to change the configuration of your computer before an OS is loaded. BIOS provides a secure run-time environment that supports a Graphic User Interface (GUI). In this environment, you can use either a pointing device (Touchscreen, TouchPad, pointing stick, or USB mouse) or the keyboard to navigate and make menu and configuration selections. The UEFI BIOS also contains basic system diagnostics.

   The UEFI BIOS provides functionality beyond that of the legacy BIOS. In addition, the UEFI BIOS works to initialize the computer's hardware before loading and executing the OS; the run-time environment allows the loading and execution of software programs from storage devices to provide more functionality, such as advanced hardware diagnostics (with the ability to display more detailed system information) and advanced firmware management and recovery software.

   HP has provided options in Computer Setup (BIOS) to allow you to run in legacy BIOS, if required by the operating system. Examples of this requirement would be if you upgrade or downgrade the OS.

3. **Where does the UEFI BIOS reside?**

   The UEFI BIOS resides on a flash memory chip. A utility is required to write to the chip.

4. **What kind of configuration data is stored on the DIMM Serial Presence Detect (SPD) memory module? How would this data be written?**

   The DIMM SPD memory contains information about the memory module, such as size, serial number, data width, speed/timing, voltage, and thermal information. This information is written by the module manufacturer and stored on an EEPROM. This EEPROM cannot be written to when the memory module is installed in a computer. Third-party tools do exist that can write to the EEPROM when the memory module is not installed in a computer. Various third-party tools are available to read SPD memory.

5. **What is meant by “Restore the nonvolatile memory found in Intel-based system boards”?**

   This message relates to clearing the Real Time Clock (RTC) CMOS memory that contains computer configuration data.

6. **How can the BIOS security be reset to factory defaults and data erased?**
IMPORTANT: Resetting will result in the loss of information.

These steps will not reset Custom Secure Boot Keys. See question and answer 7 for information about resetting the keys.

a. Turn on or restart the computer, and then quickly press esc.
b. Select Main, and then select Reset Security to Factory Defaults.
c. Follow the on-screen instructions.
d. Select Main, select Save Changes and Exit, and then follow the on-screen instructions.

7. How can the Custom Secure Boot Keys be reset?

Secure Boot is a feature to ensure that only authenticated code can start on a platform. If you enabled Secure Boot and created Custom Secure Boot Keys, simply disabling Secure Boot will not clear the keys. You must also select to clear the Custom Secure Boot Keys. Use the same Secure Boot access procedure you used to create the Custom Secure Boot Keys, but make the selection to clear or delete all Secure Boot Keys.

a. Turn on or restart the computer, and then quickly press esc.
b. Select the Advanced menu, select Secure Boot Configuration, and then follow the on-screen instructions.
c. At the Secure Boot Configuration window, select Secure Boot, select Clear Secure Boot Keys, and then follow the on-screen instructions to continue.

Using HP Sure Start (select models only)

NOTE: Sure Start Secure Boot Keys Protection must be disabled in order to reset the Custom Secure Boot Keys.

Select computer models are configured with HP Sure Start, a technology that continuously monitors your computer’s BIOS for attacks or corruption. If the BIOS becomes corrupted or is attacked, HP Sure Start restores the BIOS to its previously safe state, without user intervention. Those select computer models ship with HP Sure Start configured and enabled. HP Sure Start is configured and already enabled so that most users can use the HP Sure Start default configuration. The default configuration can be customized by advanced users.

To access the latest documentation on HP Sure Start, go to http://www.hp.com/support. Select Find your product, and then follow the on-screen instructions.
When a non-rechargeable or rechargeable battery has reached the end of its useful life, do not dispose of the battery in general household waste. Follow the local laws and regulations in your area for battery disposal.

HP encourages customers to recycle used electronic hardware, HP original print cartridges, and rechargeable batteries. For more information about recycling programs, see the HP Web site at http://www.hp.com/recycle.
