Interactive BIOS simulator

HP G6 ProOne AiO 400

Welcome to the interactive BIOS simulator for the HP G6 ProOne AiO 400

Here's how to use it...

BIOS Utility Menus: (Click the link to navigate to the individual menus) On this page you will find thumbnail images of each of the product's BIOS utility menus. To view a specific menu in greater detail, simply click that thumbnail. Just as in the live BIOS, on each menu, you can select the tab of each of the other utility menus to navigate directly to that menu.

Menu options:

While the menu options cannot be toggled, many of them offer item specific information about that option. To view this information, use the cursor to rollover the option and the information will present in a pane on the right of the BIOS screen.

That's it!

On every page there is a link that brings you back to either this Welcome page or the BIOS Utility Menus page enabling you to navigate to whatever BIOS option you wish to review.

Update System BIOS

Current System BIOS Version: S12 Ver. 80.11.01 **Current BIOS Release Date:** 11/29/2019 Installation Date of Current BIOS: 12/06/2019 **Never Checked** Most Recent Update Check: 1 Lock BIOS Version **2** Native OS Firmware Update Service **BIOS Rollback Policy** Allow BIOS Updates Using a Network **4**

HP Computer Setup

Item Specific Help

1. Check HP.com for BIOS Updates

Checks for the latest BIOS release revision on the network, and lets the user decide whether to download the BIOS image and update System.

2. Lock BIOS Version

If not selected, then BIOS updates are allowed, if selected then updates to BIOS are not allowed.

- 3. Click on the field to see the options.
- **4. Allow BIOS Updates Using a Network** Enable/Disable automatic BIOS updates through the network in a scheduled basis.

5. BIOS Update Preferences

Sets the configurations to perform BIOS updates through the network.

6. Network Configuration Settings

Configure network settings to be used for download and upload.

MS Windows Bitlocker Drive Encryption (BDE) may be enabled on your system. HP requires that BDE be suspended temporarily before the BIOS is flashed and that you obtain your BDE recovery password or recovery PIN before suspending BDE. After the BIOS is updated, BDE can be resumed.

Sure Start Secure Boot Keys Protection

Enhanced HP Firmware Runtime Intrusion Prevention and Detection **2**

Sure Start Security Even Policy

Sure Start Security Event Boot Notification

Item Specific Help

1. Sure Start BIOS Settings Protection

When enabled, HP Sure Start will lock all critical BIOS settings and provide enhanced protection for these settings via the HP Sure Start non-volatile (flash) memory

 The BIOS administrator credentials must be set to enable this setting
 See HP Sure Start documentation for details on which BIOS settings are protected

2. Enhanced HP Firmware Runtime Intrusion Prevention and Detection

Enables monitoring of HP system firmware executing out of main memory while the user Operating System is

running.

Any anomalies detected in HP System firmware that is active while the user operating system is running will result in a Sure Start Security Event being generated. *Click on the field to see the options.*

3. Sure Start Security Event Policy

This setting controls HP Sure Start behavior upon identifying a critical security event (any modification to HP firmware) during OS runtime.

- Log event only - HP Sure Start will log all critical security events m the HP Sure Start Audit log within the HP Sure Start non-volatile (flash) memory

- Log Event and notify user: In addition to logging all critical security events. HP Sure Start will notify the user within thr operating system that a critical event has occurred

- Log Event and power off system: In addition to logging all critical events. HP Sure Start will power off the system upon detecting a HP Sure Start Security Event. Due to the potential for data loss, use of this setting is only recommended in situations where security integrity of the system is a higher priority than the risk of potential data loss Secure Boot Configuration

Secure Boot

Secure Boot Key Management

Import Custom Secure Boot Keys

Clear Secure Boot keys

Reset Secure Boot keys to factory defaults

Enable MS UEFI CA key

Access to the above settings requires Sure Start Secure Boot Keys Protection to be disabled

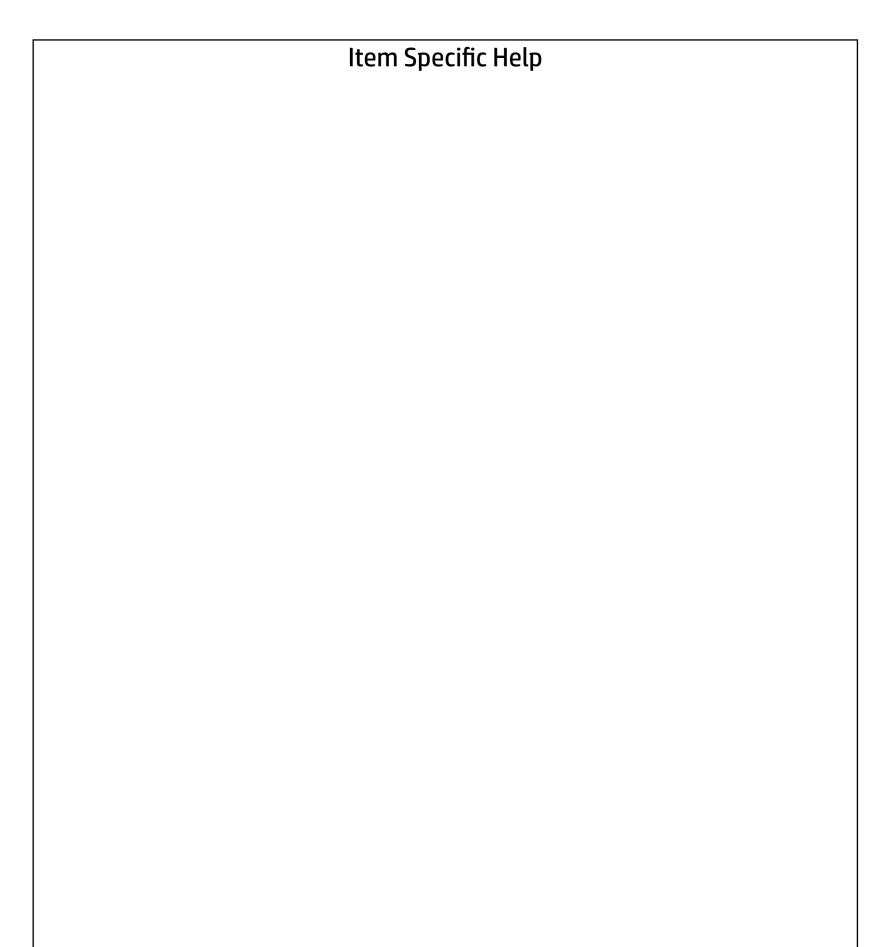

3

Ready BIOS for Device Guard Use

Requires BIOS Administrator credentials to be configured and Secure Boot to be enabled.

Security

HP Computer Setup

Item Specific Help

1. Automatic DriveLock

In Automatic Drivelock, your BIOS Administrator password is the DriveLock Master password, and the BIOS generates the Drive-Lock User Password. If you enable Automatic DriveLock on a drive, you will need to use your BIOS Administrator password to unlock the drive if it is placed in another system.

2. Set DriveLock Master Password

Sets the drive's Master password, but it does not enable DriveLock.

3. Enable DriveLock

Sets the drive's User Password and enables DriveLock.

DriveLock Security Options

HP Computer Setup

Item Specific Help

1. Enable DriveLock

Sets the drive's User Password and enables DriveLock.

Set DriveLock Password

Please exercise caution when using DriveLock. Losing the passwords will render a drive premanently unusable.

Please be aware these settings take place immediately: save not necessary.

Enter DriveLock Master Password.

Select a Drive

HP Computer Setup

Item Specific Help		

Secure Erase

This operation will erase all data on the hard drive. Please make sure the computer is connected to AC power during this process.

HP Computer Setup

Item Specific Help

1. Runtime Power Management Enables Runtime Power Management.

2. Extended Idle Power States Increases the OS's Idle Power Savings.

3. S5 Maximum Power Savings

Enabling this feature reduces the power of this system as much as possible in the S5 state. Power is removed from the wake up circuitry, the expansion slots and any management features while in SB.

4. PCI Express Power Management

Enabling this option permits the PCI Express links to use Active State Power Management (ASPM) to enter low power states while not in use.

5. Power On from Keyboard Ports

To wake up system from Hibernate/Shutdown via keyboard

Remote Management Options

Intel Management Engine (ME) 1 Intel Active Management Technology (AMT) 2 USB Key Provisioning Support USB Redirection Support Unconfigure AMT on next boot SOL Terminal Emulation Mode Show unconfigure ME Confirmation Prompt Verbose Boot Messages Watchdog Timer 4 OS Watchdog Timer (min.)

BIOS Watchdog Timer (min.)

CIRA Timeout (min.)

HP Computer Setup

Item Specific Help

1. Intel Management Engine (ME)

Enabled by default. [Help Icon] = "This option allows for a user to disable the Intel Management Engine, which disables Intel Active Management Technology and all underlying Intel ME technologies. This option also disables ME functions that allow for ME firmware updates. It is suggested to periodically enable this option to update ME firmware, as the ME firmware may contains platform stability fixes.

2. Intel Active Management Technology (AMT)

This option allows for a user to enable Intel Active Management Technology, which is tied to all ME-regulated remote management functions. Disabling AMT will still allow for ME firmware updates, which are recommended for receiving platform stability fixes.

3. Unconfigure AMT on next boot Perform AMT/ME unconfigure without password operation.

4. Watchdog Timer

Enable/Disable WatchDog Timer.

5. CIRA Timeout (min.) Set CIRA Timeout (Minutes).
